ATKINS

SILVER STEEL SAWS

Mr. Happy Man Says:

**“ATKINS’
Means Saw
Satisfaction”**

Look for the ATKINS name on the blade when you buy a saw. It means greater value and satisfaction. “Silver Steel,” ATKINS’ exclusive formula, makes a saw that will outlast two or three of the ordinary kind. “Taper-Grinding” makes an ATKINS Saw cut faster, easier and cleaner.

Get your dealer to show you an ATKINS No. 400 Hand Saw—“Finest Saw on Earth.” It will give you a “lifetime” of satisfactory service—save you money and material every time you use it.

Ask or write for our interesting folder—“Saws in the Home.” It’s free.

E. C. ATKINS & CO.

Established 1857

*Leading Manufacturers of Highest Grade
Saws for every Use; Saw Tools, Saw
Specialties, Plastering Trowels,
and Machine Knives.*

500 PUNCTURES Yet Leaks No Air

Over
1,000,000
Sold

We Want Agents

OVER 18,000,000 car owners are waiting for my amazing, long-life, no-trouble, air-filled, Milburn Puncture-Proof Inner Tube—the only tube to successfully withstand the 500-nail-hole-test without loss of air. Costs no more than the ordinary tube and is sold under a positive, money-back guarantee.

Makes Motoring a Pleasure Doubles Tire Mileage

Users of Milburn Puncture-Proof Tubes everywhere are enjoying the easy riding performance of the air-filled tube without the annoyance of punctures and slow leaks. And a tire mileage increase from 12,000 to 15,000 miles. Many users report 30,000 miles (double mileage) without removing a tire from the wheel.

Test the Milburn at My Risk

You'll be delighted. And you'll realize how easily orders are secured. Sales experience is not necessary to coin money selling the Milburn. *Positively the biggest tube value obtainable.* Absolutely non-competitive. I control all basic patents. Car owners buy on demonstration. It makes no difference what tires they use or what car they drive.

\$5,000 to \$10,000

That's what the Milburn Agency will net you per year—and more. Stop working for others. Get into business for yourself selling Milburn Puncture-Proof Tubes. My *No-Capital-Direct-From-Factory-Sales-Plan* makes it easily possible. Line up your territory rights on this whirlwind seller—NOW—full or part time.

FREE TUBE OFFER

To every car owner answering this ad. Act quick. Clip and mail your FREE TUBE COUPON—NOW. References: Industrial State Bank, Chicago—Baker State Bank, Chicago.

C. M. MILBURN, President
Milburn Puncture-Proof Tube
Company, Inc.
400-336 W. 47th St.
CHICAGO, ILLINOIS

Money-Back Guarantee

We hereby agree to refund to any purchaser the full amount paid for any Milburn Puncture-Proof Tube that leaks air when punctured by anything not larger than a twenty-penny spike. We also guarantee that casings will last much longer and give much greater mileage where Milburn Puncture-Proof Tubes are used.

PROOF

J. D. Cooper—"I have made 30,000 miles with my Milburn Puncture-Proof Tubes and have not as yet removed a rim or casing and my casings are in excellent condition."

S. C. Winfrey—"I have driven 500 nails in one of my Milburn Puncture-Proof Tubes without loss of air."

J. S. MacElroy—"Received the shipment of 200 Milburn Puncture-Proof Tubes and find them as represented. Hope to send you another 200 tube order soon."

J. T. Berdahl—"Have been using Milburn Tubes since 1922, driving every day. Have pulled out any number of nails without loss of air."

FREE TUBE COUPON—MAIL NOW

Friendly, But Friendless

—Perhaps It's comedones

SICK at heart he watched them go. Off for a good time! And he was not invited. Invitations for him were becoming fewer and fewer. He touched his face, gingerly, but never thought to blame it all on . . . comedones.

* * *

A great many young men suffer from comedones . . . commonly called black-heads. Skin can't be clean-looking, fresh, wholesome, if these disfiguring formations are present. What's more, you may not even be conscious of comedones. But your friends notice them.

Pompeian Massage Cream helps you overcome comedones. It gives you a clean, clear, ruddy complexion. It gets into the pores where comedones form, rolls out all dirt and oily secretions, and stimulates a healthy circulation by keeping skin clean and pores open.

After you shave, spread Pompeian Massage Cream generously over your face—and rub. Continue to rub until the cream rolls out. Note how dark the cream looks. That's the dirt that was in your pores. Don't have a dirty skin. Don't let comedones form. Use Pompeian Massage Cream every day. It means a healthy, wholesome skin. It means more joy in living.

Use Pompeian Massage Cream regularly at home—then you'll get the full benefit. At all druggists.

SPECIAL INTRODUCTORY OFFER

1/3 of a 60c jar—for 10c

For 10c we send a special Trial Jar containing one-third of regular 60c contents. Contains sufficient Pompeian Massage Cream to test thoroughly its wonderful benefits. Positively only one jar sent to a family on this exceptional offer.

THE POMPEIAN CO.,
Cleveland, Ohio, Dept. 83

Gentlemen: I enclose a dime (10c) for 1/3 of a 60c jar of Pompeian Massage Cream.

Contents for October, 1926

No. 4

Acrobat—dangerous act of balancing	542
Advertising—bright wrappings sell goods	516
Aerial Photography—views of Washington	609
Airplane	
for twenty persons has three engines	599
has sleeping cabin	578
hunt bugs to curb plant disease	615
monoplane that folds up	531
to cross ocean in thirty-six hours	575
Animals	
behind scenes at the zoo	611
big game increasing in national forests	572
Archery—game on shipboard	607
Asbestos—mines	579
Athletics—sprinter races billiard ball in speed contest	616
Automobile—your next auto	602
Automobiles—Equipment and Supplies—fabric covers	
protect auto in repair	561
Automobiles—Lighting—shade for auto headlights	562
Automobiles—Lubrication	
springs operate oiler	626
tester for crankcase oil	645
Automobiles—Motor—meter for auto compression	610
Aviation	
floating hotels in ocean to serve air liners	601
one death in million miles of air traffic	594
Barn—on wagon aids contractors	598
Basket—fireproof for waste	588
Bed—crib in railroad parlor car	537
Bees—swarm on car bumper	569
Blowtorch—alcohol	574
Boats and Boating	
portable boat for bathing	534
stand by and come about	538
Broom—on rubber tires	645
Building Construction	
steel bridging for joists	607
wheeled stand for painters	632
Burbank, Luther—work continued by Leland Stanford University	632
Butterflies—fed on bottle at farm	625
Cap—inflated swimming	537
Cap (Metal)—lever ring on bottle helps to remove	552
Cards (Playing)—box for shuffling card deck	543
Cement—sprayer mends furnace	598
Check Protector—like pliers	635
Chemistry—what it is doing for you	643
Churn—electric, fits on wall	609
Ciphers—magic lure of	564
Cleanliness—rubbish racks on lamp posts	624
Clock—to run for ten years on one battery	586
Clothing—animated faces on slickers	562
stainless stockings	562
Coal—dust for Diesel engine tested in Germany	601
Coconut—bracelet of shell of	534
Coils—winder for coiling springs	624
Crime—electric protector on wrist disables bandits	553
Deaf—flames help deaf children learn to talk	561
Disease	
main cause of seasickness	553
record of heartbeats made to help treat disease	599
Dog—population of America	637
Door—double dial in hotel room	594
Education—geology school on wheels	570
Eggs	
cleaned by sand blast	624
woman risks life on cliffs for birds' eggs	572

Electric Fan—for closed cars	531
Electric Light—vacuum-base trouble light	636
Electric Lighting—lamp held by vacuum cups	577
Electric Power—links U. S. from St. Louis to Boston	578
Electric Wiring—holes for switch boxes cut in less than a minute	615
Excavator—ditch digger as fire fighter	569
Filling Station—derrick at, represents oil well	608
Fish	
goldfish aid electric plant by devouring moss	607
new way of freezing	534
Fishing	
Atlantic New York's "fishin' hole"	593
transparent minnow trap	599
Flag—mystery shrouds origin of U. S. flag	590
Foot—pedaling player piano aids treatment of feet	562
Football—how to be a star	534
Fountain Pen—filling device	574
Gambling—you can't win at	580
Garage—spiral floor in skyscraper	633
Garbage—burner for home	640
Garden—built-in terraces on hillside	563
Garden Tools and Appliances	
rake with long teeth	647
shears clip and hold flowers	578
Glass—for lenses	646
Gold—old-time ruins of Timbuctoo, Calif.	641
Golf	
how the world's champion golfer drives	535
tees carried in hat	626
tiny temple on course	635
Grindstones—as stairway	574
Guns (Ordnance)—marine fights with death testing machine guns	533
Hammer—has changeable tips	642
Helmet	
hinge on top of safety	563
new style of steel helmet	635
Holder—for window cards	579
Horse Racing—why gay colors are worn by jockeys	608
House	
a log cabin of today	595
built on high stilts	573
summer home like barrel	552
House Plan	704
Household Devices	638
Iceberg—fighting icebergs	627
Incas—ruins of palace show builders' skill	593
Inventions—patents sought in England by women	573
Iron—reduce iron and steel waste by electric process	592
Ivory—carved tusk depicts biblical scene	600
Jack—auto in wheel socket serves as lock	624
Lens—for big aerial camera	601
Microphone—monster "ear" to find planes	617
Model	
how boys turn play into dollars	571
Independence hall modeled in sugar	545
Monument	
marks landing place of U. S. troops in France	551
veiled sphinx at base of world war memorial	615
Motor Truck—for icing railroad cars	588
Moving Pictures—riding log over deep chasm affords movie thrill	545
Musical Instrument—ukulele with hinged neck	532
Name—Smith most common	637
Office Supplies—desk memorandum on roller	562
Oysters—grown in trees	576

[Continued on Page 4]

Paper—making machine model	646	Birds—winter house on porch	679
Parachute		Boats and Boating—cabin scow driven by auto engine	681
death dive hero tells his sensations	640	Cistern—self-cleaning device	679
flyers saved by	626	Dairy	
test strength of, with aid of elephant	594	barn-door fly chaser	667
Parasol—for bathers	543	spring hooks hold cows' tails	683
Pen—point cleaner	632	Electric Light—how to make a porch lamp	680
Pianos—playing twenty-four, tests outdoor theater	631	Ford Car—overcoming troubles in replacing windshield glass	679
Pipe—metal strip to hang pipe fits all sizes	616	Garden Tools and Appliances	
Poison—gun to kill weeds	636	rake cleans lawn thoroughly	684
Polo—bicycle game on beach	593	tight joints in rubber tubing	683
Postal Service—pony express to plane	589	Guns—cleaning shotgun barrels	684
Pump—foot, for auto tires	637	Harness—trace chain cover	678
Punch—vest pocket size hand	647	Holder—for medicine dropper	684
Radio		Ice—compressed air cleaning away mush ice	667
latest novelties	653	Knot—keeping shoes tied	673
our radio world of tomorrow	648	Latch—hand-wrought colonial	682
Radio Antenna—spring wire coil holder	654	Mending—tissue made from rubber tube cement	684
Radio Apparatus—rotary meter	664	Model—build your own ship models	668
Radio Application		Nails—method of starting	678
radio in test to find if continents move	598	Photography—imitation rock base for photos	673
to cash checks by radio	579	Pine—cone novelties	674
Radio Battery Charger—homemade	655	Razor—sharpening	667
Radio Condenser—what the new condenser ratings mean	654	Roof—smoke locates leaks in	684
Radio Dial—re-marking	657	Smoker's Accessories—stand that cannot upset	680
Radio Receiver—simplicity of latest superhet	658	Stovepipes—remedy for soot choked	678
Radio Transformer—primary for R.F. transformers	657	Tires—making bicycle tires unbreakable	666
Radio Tube—metal cap stabilizes	654	Toy—make a Teddy tumbler	665
Razor—safety, that folds up	616	Vacuum Cleaner—for dusting fruit	683
Refrigerator—in dairy truck	570		
Rubber			
drain Everglades for planting rubber	545		
vulcanizing to metal	592		
Safety Devices and Measures			
dummy of policeman	630		
safety sign for children warns against autos	637		
speeder trapped by whistle on auto exhaust	635		
Safety Movement—slogan-bearing street car aids safety campaign	617		
Salesmanship—push-button corner grocery	636		
Saws—saw with removable teeth	632		
Seals—trapping elephants of the sea	529		
Shaper-Jointer—swivel mounted, portable	600		
Shears—corrugated metal	647		
Ship			
powder puff for christening	610		
what is a ton?	646		
Shoe Polisher			
fits in pocket	551		
for hotels	631		
Skyscraper—eighty-one story building for Detroit	642		
Smokers' Accessories			
kit on auto door	586		
self-adjusting pipe reamer	640		
Sound—hinged "skirt" on street car deadens noise	610		
Stages—wheeled	635		
Stencil—pictures and writing copied from	586		
Street Traffic Regulations			
center line on auto road prolongs its life	550		
cost of traffic jams in New York	531		
Submarine—sub's wreckage	544		
Superstition—what is your pet superstition?	546		
Table—electric revolving	532		
Taxicab—with lottery wheel	553		
Temperature—moist air at sixty-four most comfortable	532		
Tennis—lever to tighten tennis net	589		
Time—telling time by stars with pocket dial	630		
Tires—drill regrooves truck tires	552		
Tractor—wheel without rim	633		
Travel			
around world in single day	588		
what is most interesting place in world	618		
Umbrella—to match raincoat	647		
Vikings—rock inscriptions show early visit to America	609		
Voice—electrical, given chorus girl	536		
Volcano—bore holes around to study eruptions	647		
Waste Products—chemists distill old shoes for medicine and paint	573		
Weather—observations made in seventeenth century	534		
Wheelbarrow—has adjustable balance	577		
Wind—resistance in motoring	551		
Wrench—for auto headlights	640		
X-Rays—old master restored by use of	587		

SHOP NOTES

Agriculture Implement—emergency grain drill tube	700
Alarm—electric, indicates unwound clock	694
Angles—method of measuring	701
Automobiles—Repairing—washing parts in gasoline	693
Bell—factory foreman's call	699
Blowtorch—made from gasoline lamp	685
Boilers—oil in may cause blistered tubes	703
Box—stock box with hinged end	703
Building Construction—kinks	692, 695
Centering—V-block device	696
Clamps	
for welding	702
holds pliers to bench	701
spring, for laying out blocks in pairs	690
Connecting Rod—fitting bearings	701
Drain Pit—sliding door on	697
Electric Battery—proof against corrosion of terminals	693
Fence Post—brace keeps heavy posts upright while tamping	687
Fire Protection—method for railroad ties	688
Ford Car	
assembling bendix drive on starter	686
device for changing spring shackles on	690
Funnel—radiator filling	698
Glazier Tool—grooved roller	687
Holes—cutting in thin sheet copper	687
Ladder—handy support	688
Lathe	
graduating a six-foot scale in a lathe	689
rigged up for use as rotary metal shears	698
Machine Shop—cutting a radius corner	694
Marking—quick acting blocks	702
Motor Truck—removable one-man body	689
Name Plates—making auto	700
Paint	
felt washer protects painted surfaces	690
homemade heat proof	699
when to paint vacuum equipment	696
Planing Machine—profile planing	698
Printing—emergency furniture	693
Road	
novel marking system	701
planks keep trench openings smooth	686
Safety Devices and Measures	
guard on power line poles	694
test for foul air in wells	698
Saws and Sawing Rigs	
how to braze band saws	687
sawbucks help raise log	702
to increase capacity of	699
Screwdriver—drill spindle	699
Seed—hulling and scarifying clover	696
Smokestacks—inside and outside coatings for	702
Surface Plate—glass for	693
Table—portable and collapsible for tools	691
Tags—waterproofing shipping	703
Trailer—carries concrete mixer	696
Wagon—set your own tires	690
Welding—V-blocks	691

A FASCINATING BOOK of Detective stories that shows how ordinary boys and men have won nationwide fame, thousands of dollars in rewards, and important official positions by solving finger print mysteries!

"... Shortly before midnight a young couple slipped away from the dance. They sought out a long, low, rakish roadster. With powerful headlights picking out the path, it moved cautiously through the parking space and out onto the high road.

"Early next morning—a farm boy found the girl's dead body crumpled in the wayside ditch. Concealed in the bushes at the side of the road lay the boy's lifeless body, also shot from behind."

Who had committed the murder?

Read the rest of the story on page 15 of our new Finger Print book. Find out how the murderers were traced, tried and convicted, and how a certain finger print expert solved five murder mysteries and secured 97 convictions in less than a year.

Find out how you can become a Finger Print Expert.

Thirteen Thrilling Stories of Mystery and Achievement

Thirteen stories of crime, daring robberies, mysterious murders, thrilling escapes. You'll enjoy "Snowflakes," a great dope story—"The Invisible Finger Print," a blackmail mystery.

In "Foiled," a true account of a great political coup, you'll read of the astounding rise of a young country photographer who saved the Mayor of his city and was later appointed to the most important identification position in the state.

You'll read of men who achieved fame, big rewards and important positions in a short time through the study of finger prints.

Any man who can read and write can become a finger print expert.

PARTIAL LIST Graduates U. of A. S. Recently appointed Finger Print Ex- perts of these States, Cities and Institutions.

State of Iowa
State of Idaho
State of Colorado
St. Paul, Minn.
Columbus, Ohio
Detroit, Mich.
Pittsburgh, Pa.
Great Falls, Mont.

Finger Print Experts Needed!

More and more the detection of crime resolves itself into a problem of identification. Trained men are needed every month to fill the new positions that are created. Records show that University of Applied Science graduates get first choice at the big positions. Listed below are some of the city and state bureaus to which U. of A. S. men have been appointed.

You can learn finger print identification in a few months in your spare time—at home.

Send the Coupon!

This book cannot be bought at any newsstand or bookstore—but it will be sent to you FREE if you write to us at once. Thirty-two pages, illustrated in color with weird crime pictures. This book explains your opportunities in the finger print world—shows how you can get your training in a few months—tells how you can get a professional finger print outfit free. Write for this book today.

ELECTRICITY

Complete Study Course and Pocket Library \$10

SHIPPED FREE

A set of HAWKINS GUIDES is a true friend to the electrical worker. It tells you how to do any job the right way—without guessing or taking chances.

Hawkins Guides put all the facts about modern electrical engineering at your finger tips. Therefore your chances for advancement in the electrical field are unlimited.

HAWKINS GUIDES DOUBLE YOUR VALUE

Electricity is king! It is the ruling force of today—transportation, communication, light, heat, power—indeed every modern activity is dependent on electricity. Industry is crying for electrical men that know their jobs!

Hawkins Guides teach you all you need to know about electricity in easy, step-by-step lessons. Daily spare time reading of the Guides will greatly increase your value to yourself and your employer in a few weeks. Hundreds of our friends have written us and told us this!

ing of the Guides will greatly increase your value to yourself and your employer in a few weeks. Hundreds of our friends have written us and told us this!

READERS OF HAWKINS GUIDES KNOW HOW

"You can't stump him on an electrical job." "He certainly knows his business." "Certainly have to hand it to him for knowing how." —These are the things employers say about our friends who are readers of Hawkins Guides. No matter what question or problem comes up the Ready Reference Index enables you to give an expert answer at once.

HAWKINS STARTS YOU WHERE OTHERS LEFT OFF

Why should you work at low wages when easy reading of HAWKINS GUIDES will give you the money-making knowledge of the expert? Easy daily reading of the Guides will teach you in a few months what it has taken the expert a lifetime to learn!

With HAWKINS GUIDES in hand you have a running start to success in the electrical field. You will actually begin where others left off!

NOW!

This coupon is your golden opportunity. Tear it out—send it now!

FOR EXAMINATION!

REAL ELECTRICAL EDUCATORS

"Hawkins Guides at \$10 is the best investment I have ever made. Am able to take up almost any electrical job and have never gone to an electrical school."—B. Roessler, Oenaville, Texas.

AS EASY AS A. B. C.

"Everything in Hawkins Guides is very plain and anybody can read and understand them as easy as A. B. C."—J. Knight, Tobyhanna, Pa.

OTHER ENTHUSIASTIC READERS SAY

"Worth ten times their price." "Helped me to two raises in four months." "Better than a school of instruction." "Studied them when I was laid up and got further ahead than if I had been on the job."

Hawkins Guides Explain These Points So You Can Easily Understand:—

Magnetism—Induction—Experiments—Dynamometers—Electric Machinery—Motors—Armatures—Armature Windings—Installing of Dynamometers—Electrical Instrument Testing—Practical Management of Dynamometers and Motors—Distribution Systems—Wiring—Wiring Diagrams—Sign Flashers—Storage Batteries—Principles of Alternating Currents and Alternators—Alternating Current Motors—Transformers—Converters—Rectifiers—Alternating Current Systems—Circuit Breakers—Measuring Instruments—Switch Boards—Wiring—Power Stations—Installing—Telephone—Telegraph—Wireless—Bells—Lighting—Railways. Also many Modern Practical Applications of Electricity and Ready Reference Index.

Learn how men without a day's previous auto experience, and only common schooling become Garage Owners, Superintendents, Managers and can earn up to \$150 a Week and more! See why hundreds of men have found "JOB-WAY" to be such interesting, practical Training!

I stand ready to give you absolute proof. Clip COUPON NOW and I'll rush your Lessons to you Absolutely Free!

B. W. Cooke
Directing Engineer
Chicago Motor Training Corporation
1916 Sunnyside Ave.
Dept. 716 CHICAGO

Fifteen years ago he was making only \$38 a month!

Success of W. H. Forse, Jr., an amazing tribute to the courage and ability of a man who refused to stay down

IF EVER a man had to fight for success it was W. H. Forse, Jr.

He started as an office boy at \$5 a week and for eight long years after that tried vainly to find the work for which he was best suited.

He clerked in the credit department of the Ely & Walker Dry Goods Company, of St. Louis . . . he sold rope and woodenware . . . he even tried conducting a retail grocery store in a small town.

But it wasn't the work for him and he knew it. So, at the age of twenty-four, he decided to start over—to take up a course with the International Correspondence Schools and get into the one field that had always fascinated him . . . *accounting!*

As a result of this training, Mr. Forse secured a position as clerk with the Union Traction Company of Anderson, Indiana. He soon showed such mastery of his work that he was made chief bookkeeper, then acting auditor, auditor, assistant treasurer and then secretary-treasurer of the Union Traction Company and ten subsidiary corporations.

During this period, Mr. Forse was elected president of the American Railway Accountants Association and president of the Central Railway Accountants Association, became a Certified Public Accountant in Indiana, and wrote "Electric Railway Accounting and Auditing."

Today Mr. Forse is the president of the Forse Manufacturing Company, president of the Spinaway Manufacturing Company, treasurer of the Madison Loan Association and treasurer of the Woodlawn Heights Company—a brilliant example of the value of spare-time study.

Thousands of other prominent executives pay similar tribute to the high character of the training they received from the International Correspondence Schools.

Jesse G. Vincent, vice-president of the Packard Motor Car Company, is a former I. C. S. student. So is Walter C. Allen, president of the Yale & Towne Lock Co. So are Walter P. Chrysler, president of the Chrysler Corporation; J. R. Hall, vice-president of the Chandler Motor Car Company; E. V. Rickenbacker, vice-president and director of sales of the Rickenbacker Motor Company; and Aubrey B. Carter, secretary to the Comptroller of the Currency of the United States.

If the I. C. S. can help to smooth the path to success for men like this, it can help you. If it can help other men to

get out of the rut of routine jobs and go upward to the high-salary class, it can help you too.

At least find out how by marking and mailing the coupon printed below. It takes only a moment—it doesn't obligate you in any way—but it may be the means of changing your entire life. "Do it now!"

Daring Young Men Needed in Aviation

THERE is no field of work in the world today which offers such amazing opportunities to young men of daring and who love adventure as does Aviation. Although still in its infancy, there is a crying demand in Aviation for young men with courage, nerve and self-reliance. For those who can qualify there will be thousands of highly paid jobs which will lead quickly and surely to advancement and success.

Big Opportunities Await The Trained Man

Look over the fields of work which are open to the young man today. You will find that Aviation is the **ONE FIELD** that is not overcrowded—the **ONE FIELD** in which there is plenty of room at the top. Think of it. Only 21 years ago Orville and Wilbur Wright made the world's first airplane flight. Now airplanes fly around the world. Yes, Aviation offers the same wonderful opportunities today that the automobile and motion picture industries did 15 and 20 years ago. Men who got in on the ground floor of those industries made fortunes before others woke up. **AVIATION IS NEW!** It clamors for nifty young men—and the trained man has the world before him in Aviation.

Easy to Become an Aviation Expert — \$50 to \$100 a Week

You can qualify now quickly for one of these exciting highly paid jobs through a new, sure, easy method of training. The study of Aviation is almost as interesting as the work itself. Every lesson is fascinating and packed full of interest. That's why Aviation is so easy to learn—you don't have to force yourself

to study—once you start, you can't get enough of it. Only one hour of spare time a day will give you the basic training in an amazingly short time.

PREPARE For One of These POSITIONS

Aeronautical Instructor
\$60 to \$150 per week
Aeronautical Engineer

Aeroplane Inspector
\$30 to \$70 per week
Aeroplane Salesman
\$5,000 per year and up
Aeroplane Assembler
\$40 to \$65 per week
Aeroplane Builder
\$75 to \$200 per week

One student, S. F. McNaughton, Chicago, says: "Your lessons are like a romance, and what is more, after one reading, the student gets a thorough understanding. One never tires of reading them." James Powers, Pa., another student, says: "I am indeed surprised that such a valuable course can be had from such practical men for so little cost."

Personal Instruction by Experienced Men

Men who have had actual experience in Aviation give you personal attention and guide you carefully through your training. They select the lessons, lectures, blueprints and bulletins. They tell you the things that are essential to your success. Every lesson is easy to read and quickly understood.

Big Book on Aviation FREE

NEW ENCYCLOPAEDIA

It's All Here—the Complete
Record of World Progress! { THIRTEENTH EDITION }

GIANT presses speed forth the final pages. Fresh from the pens of the foremost living authorities, the new Britannica is here. This, the Thirteenth Edition, is as vast an achievement as any of the age's advancements which it records so brilliantly.

Sparkling, clear-cut reflection of all happenings of the breathless years just past is in these pages, and also the events about to be, those pending in laboratory and council chamber. Tomorrow's news is in the new Britannica.

World-Changing Progress

Inventors and business executives, scientists and leaders in today's advance, are eagerly awaiting this new Encyclopaedia Britannica. It affords the one up-to-date survey of all the stupendous world-changing progress of recent years. Here is news of telegraphic freshness from every frontier of civilization.

The Threshold of Tomorrow

The new Britannica is your 2,500 brain-power ally. Here are 45,000 separate articles from more than 2,500 authorities in every civilized country of the world. It is a wealth of facts, information, ideas, suggestions—all so accurately observed, so expertly written as to make the most secure foundation for any activity, of the present and immediate future.

To the Student and Scientist the new Britannica is a great international laboratory and lecture hall combined. To the manufacturer it is an up-to-date industrial plant which he may visit at will. To the Merchant it is a busy mart, a source of never-failing profit. To the Wage Earner it is the key to success, power and affluence. To the lover of the Great Outdoors it is the broad highway that leads to all the wonders of the world.

EARLE E. LIEDERMAN, *The Muscle Builder*

Author of "Science of Wrestling," "Muscle Building," "Secrets of Strength," "Here's Health," "Endurance," etc.

Will You Be No. 100,007?

A Dream That Came True 100,006 Times

By Earle E. Liederman

Years ago, I dreamed and hoped for the day when I would be able to help my fellow young men. I wished they could enjoy my robust health and muscle. I knew everyone admired muscles. I wanted a chance to show everyone how easy it is to have real muscular development. My dream has come true! Yes, fellows, 100,006 times I have taught that many men the secret of having steel muscles. As I write, my list is just over the hundred thousand mark. My muscle secrets must be told. I want to help every live wire realize his wildest dreams and ambitions when it comes to muscular development.

Now You'll Enjoy Life

I don't care who you are or what you look like—I'll guarantee to put muscles on you. I know. I was a weakling, too. I didn't only prove it to myself—I have proven to every last man who was game enough to go through with my system.

Here's How I Work

First of all—I make Aladdin look like a piker. I have no lamp, but the magic of what I do has developed over 100,000 healthy, muscular bodies. Yours ought to be one of them. As soon as you get on the job it will. I don't indulge in guess-work. My system rebuilds your body from head to foot. After a few days you will notice a feeling of new life—springy step, a snap and sureness that you knew nothing about.

I put you through a course you'll enjoy every minute—I enlarge your muscles, harden them; train them; I'm the muscle builder! You'll get real chest expansion. If you want big, show-off muscles, you can have them. If you want a beautifully formed symmetrical athletic body that will instantly respond to strength, speed and pep—that's the kind of body I'll build for you—yes, that's the kind of body I give all my happy boys.

Come Along On My Muscle Express

Remember, I can thank my muscles and my secret for my success. You have the same chance—if you will only grab it by signing the coupon below and rushing it to me. You want to act quick or your chance will peter out. Get aboard the Muscle Express. I send you at express speed on the way to health and strength.

My Guarantee

Remember, I don't just promise results—I guarantee them. Before thirty days roll by, I'll put one solid inch on your arm and two inches on your chest. This is just one of the surprises I have ready for you. I have a bag full of others and the beauty of it all is that it's so easy—never tiresome—and almost like playing.

Take My Tip

It's worth a ton of just talk or idle hope. Make up your mind now, this very second, that you are going to be strong, full of pep and ambition. Before long you will be surprising your friends by the change in your physique—your chest will stick out like a balloon. You'll have color in your cheeks—your arms will fill your coat sleeves—those legs of yours will hold you up like they never did before—you'll be real muscle all over—your walk will assure the world you are "there." You will have the same chance I had to make money out of your new strength, vitality and pep. Let me repeat—write now—this very second, because you might forget and miss out. I don't mean maybe or perhaps. If you are a "doubting Thomas" I dare you to call my bluff—make me prove it—it doesn't cost a cent to find out. Action is the only thing that counts in this "muscling" business—take my tip and rush the coupon for my big illustrated free book.

Send For My New
64 Page Book

"Muscular Development"

IT'S FREE

It contains forty-eight full-page photographs of myself and some of the many prize-winning pupils I have trained. Many of these are leaders in their business professions today. I have not only given them a body to be proud of, but made them better doctors, lawyers, merchants, etc. Some of these came to me as pitiful weaklings, imploring me to help them. Look them over now and you will marvel at their physiques. This book will prove an impetus and a real inspiration to you. It will thrill you through and through. The book is yours. I want you to have it with my compliments. Keep it. This will not obligate you at all, but for the sake of your future happiness and health, do not put it off. Send today—right now before you turn this page.

Read What Some McCarrie Graduates Write:

A. K. writes: Am making good as manager of laboratory. Just turned down an offer of \$75 a week.
C. M. writes: I am now doing laboratory work for D. D. N. M. at a salary of \$50 a week.
S. K. H. writes: Some months I take in \$500. Last month I took in \$674.80.
G. P. W. writes: Am making \$50 a week straight time turning out bridges, plates, etc.
W. M. B. writes: I have an excellent business. I average \$75 to \$150 a week.
R. W. B. writes: I secured one of the very best responsible positions immediately upon completion of my course.

These are specimens of hundreds of letters on file here from McCarrie graduates.

Facts About This Money Making Opportunity

There are 64,000 dentists in the U. S. Thousands of dental "labs" and expert mechanical Dentists are needed to handle the great volume of work required by dentists. Mail coupon for free book that gives all details of this great opportunity and **SPECIAL OFFER.**

McCarrie Schools of Mechanical Dentistry
1338 S. Michigan Ave. Dept. 33 CHICAGO, ILL.

**James Jacobsen,
Winchester, Ky.**

When I took up the N. S. T. A. course, I was selling shoes for \$35 a week. Now I am earning an average of \$135 a week. I attribute this remarkable progress to N. S. T. A. training.

**C. W. Birmingham,
Dayton, O.**

A few years ago I was working in a shop for \$15 a week. Immediately upon completion of my course I was offered a position through N. S. T. A. My earnings were from \$5,000 to \$6,500 per year. Today I am earning \$7,500 per year.

**F. B. Englehardt,
Chattanooga,
Tenn.**

Without this training I would still be working for the other fellow. This year I will make close to \$7,000 — some increase since my enrollment.

**Frank Walsh,
Springfield, Mass.**

I was clearing around \$1,000 a year when I was enrolled with N. S. T. A. I have increased my income to \$7,286. I now own my home, drive a nice car, and have a summer camp. My grateful thanks to N. S. T. A.

**J. E. GREENSLADE, President
National Salesmen's
Training Association**

You're Fooling Yourself

-if You Think These Big Pay Records Are Due to LUCK!

But don't take my word for it! When I tell you that you can quickly increase your earning power; I'LL PROVE IT! FREE! I'll show you hundreds of men like yourself who have done it. And I'll show you how you can do it, too.

I'll come directly to the point. First you'll say, "I could never do it: These men were lucky." But remember the men whose pictures are shown above are only four out of thousands and if you think it's luck that has suddenly raised thousands of men into the big pay class you're fooling yourself!

Easy to Increase Pay

But let's get down to your own case. You want more money. You want the good things in life, a comfortable home of your own where you can entertain, a snappy car, membership in a good club, good clothes, advantages for your loved ones, travel and a place of importance in your community. All this can be yours. And I'll prove it to you, Free.

First of all get this one thing right: such achievement is not luck—it's KNOWING HOW! And KNOWING HOW in a field in which your opportunities and rewards are ten times greater than in other work. In short, I'll prove that I can make you a Master Salesman—and you know the incomes good salesmen make.

Every one of the four men shown above was sure that he could never SELL! They thought Salesmen were "born" and not "made."

When I said, "Enter the Selling Field where chances in your favor are ten to one," they said it couldn't be done. But I proved to them that this Association could take any man of average intelligence—regardless of his lack of selling experience—and in a short time make a MASTER SALESMAN of him—make him capable of earning anywhere from \$5,000 to \$10,000 a year. And that's what I'm willing to prove to you, FREE.

Simple as A. B. C.

You may think my promise remarkable. Yet there is nothing remarkable about it. Salesmanship is governed by rules and laws. There are certain ways of saying and doing things, certain ways of approaching a prospect to get his undivided attention, certain ways to overcome objections, batter down prejudice and outwit competition.

Just as you learned the alphabet, so you can learn salesmanship. And through the NATIONAL DEMONSTRATION METHOD—an exclusive feature of the N. S. T. A. System of Salesmanship Training—you gain the equivalent of actual experience while studying.

The N. S. T. A. System of Salesmanship Training and Employment Service will enable you to quickly step into the ranks of successful salesmen—will give you a big advantage over those who lack

this training. It will enable you to jump from small pay to a real man's income.

Remarkable Book, "Modern Salesmanship," Sent Free

With my compliments I want to send you a most remarkable book, "Modern Salesmanship."

It will show you how you can easily become a Master Salesman—a big money-maker—how the N. S. T. A. System of Salesmanship Training will give you years of selling experience in a few weeks; how our FREE Employment Service will help select and secure a good selling position when you are qualified and ready. And it will give you success stories of former routine workers who are now earning amazing salaries as salesmen. Mail the attached coupon at once and you will have made the first long stride toward success.

"Which Man Shall I Promote?"

WILL your employer think of you when the next good position is open? Will he say, "There's a man who is training himself to handle bigger work," or will he pass you by as just an ordinary routine worker?

Do not try to fool yourself. Your employer is watching you more closely than you may think. He's constantly checking up on your work, your abilities, your ideals, your aspirations. Stored away in the back of his mind or filed away in black and white, are his impressions of the kind of man you are and the kind of man you want to be.

He's willing and anxious to pay you more money the minute you prove that you are worth more money. But he can't take chances. When he promotes a man, he wants to be sure he will make good.

Decide now—today—that you are going to be ready when your chance comes. Choose the position you want in the work you like best—then train for it. You can do it in spare time in your own home through the International Correspondence Schools.

NATIONAL RADIO INSTITUTE
Dept. MT-7
Washington, D. C.

RADIO NEEDS TRAINED MEN!

I show you how to increase your earnings almost from the start of your course through practical pointers I give you. Howard B. Luce of Friesens, Pa., made \$320 in 7 weeks during his spare time. D.H. Spitt of Newport, Ark. writes "While taking the course I earned in spare time work approximately \$900." Earl Wright of Omaha reports making \$400 in a short time while taking his course—working at Radio in his spare time only! Sylvester Senso, 207 Elm St., Kaukauna, Wis., made \$500. These records not unusual—these men are a few of hundreds. And when you graduate, my big Free Employment Department helps you get the job. You get just the same preparation and assistance toward success we gave E. W. Navy, Chief Operator of Station WRNY, Erie Chambers, Radio Engineer for Stewart-Warner, J. E. Fetzer, Chief Engineer of Station WEMC. The National Radio Institute, established 1914, today offers you the same opportunity these men had under a bond that guarantees you full satisfaction or money refunded. Mail coupon TODAY for my big Free Book and proof!

Originators of Radio Home-Study Training

Kimball With WMAQ Chicago

"Accepted a position with the Chicago Daily News Station WMAQ. My income practically doubled, thanks to your fine course. I handle all consultation also do operating." Keith Kimball, Station WMAQ, Chicago, Ill.

Promoted to Big Job

"Just been made Sales Manager of this Radio firm—received a very good increase in pay. Up to present have been getting salary which in 2 months enabled me to purchase a new car." R. Jones, Bay City Mich.

Read the true stories printed in this border of men who got out of the rut

Chief Operator at Station WCR

"Am sending a photograph of station WCR where I am now Chief Operator. I am proud to say that your course is the reason for my success." Edward Stanko, Hotel Statler, Buffalo, N. Y.

Photo shows Graduate E. F. Spadoni in his own Radio store at Chicago, Ill. "Your course gets the credit," says Spadoni.

\$75 in one Day for T. M. Wilcox

"I am in business for myself and recently made \$75 in one day. I was an electrician of rich experience and was occupying a splendid position as telephone superintendent when I enrolled with your course believing it would open up greater opportunities—have not been disappointed. Estimate that Radio will be worth tens of thousands of dollars to me in the next few years." T. M. Wilcox, Belle Island, Newfoundland.

Quick Easy Way to Learn Drawing

How you can earn big money in Commercial Art, Illustrating, Designing or Cartooning, without being a "genius," and regardless of your present ability.

Never was there such a need for artists as today! Business revitalized needs scores. Illustrated catalogs, advertisements, posters, circulars, trade-mark designs—countless pieces of art work are needed by the busy business world. 20,000 periodicals are published in America—every one of them needs the services of artists for each issue! You can't begin to realize the gigantic amount of art work that must be done—and the demand is increasing daily. Big money is gladly paid—and big money is waiting for anyone with foresight enough to prepare for this pleasant profession. Through our quick, easy method of teaching, YOU can earn \$40 to \$100 a week as an artist, regardless of your present ability.

Learn in Spare Time

This simple method is like a fascinating game. No matter how little you may know about drawing, no matter whether people tell you, "you have no talent," no matter what your present ability may be—if you can write we can teach you to draw. This quick method simplifies everything—all the red-tape, "art for art's sake" teaching and superfluous theory is taken out and in its place is put definite, practical instruction so that you will make money in the art game. The course is the work of successful and experienced commercial art instructors. And all your instruction is under their personal supervision.

DRAWING ^{is a way} to FORTUNE

Ali Hafed, a Persian farmer, sold his acres to go out and seek his fortune. He who bought the farm found it contained a diamond mine which made him fabulously rich. Ali Hafed overlooked the great opportunity at his door to go far afield in search of wealth—which illustrates a great truth.

DO YOU LIKE TO DRAW?

If you do it is almost a certain indication that you have talent, a talent which few possess. Then don't follow Ali Hafed's example and look farther for fortune. Develop your talent—your fortune lies in your hand!

Earn \$200.00 to \$500.00 a Month and More

Present opportunities for both men and women to illustrate magazines, newspapers, etc., have never been excelled. Thousands of publishers buy millions of dollars' worth of illustrations every year. Illustrating is the highest type of art—pleasant work, yielding a large income.

THE FEDERAL COURSE IS A PROVEN RESULT GETTER

It is the only Home Study Course which has been built by over fifty nationally known artists—Sid Smith, Neysa McMein, Norman Rockwell, Clare Briggs, Charles Livingston Bull and Fontaine Fox among them.

FREE—"A ROAD TO BIGGER THINGS"

If you like to draw you should read this free book before deciding on your life's work. It tells about illustrating as a highly paid, fascinating profession and about the famous artists who have helped build the Federal Course. Just tear out this ad, write your name, age, occupation and address in the margin, mail it to us and we will send you your copy of the book and the sample lesson free. Do it right now while you are thinking about it.

Federal School of Illustrating

Easy as A-B-C !

You Can Play Any Instrument In a Few Months This Delightful New Easy Way!

Quickest because natural and pleasant. Grateful students say they learn in a fraction of the time old dull methods required. You play direct from the notes. And the cost is only a few cents a lesson!

Learning music is no longer a difficult task. If you can read the alphabet, you can now quickly learn to play your favorite instrument! A delightful new method has made it positively easy to become a capable performer within just a few months. And the cost is only a *fraction* of what people used to spend on the old, slow methods!

You don't need a private teacher, this new way. You study entirely at home, in the privacy of your own room, with no one to interrupt or embarrass you. And, strange as it may seem, you'll enjoy every minute of it—because the new method is *agreeable* as well as *rapid*!

No Tricks or Stunts—You Learn from "Regular" Music

You don't have to know the first thing about music in order to begin. You learn to play from actual notes, just like the best musicians do. And almost before you realize your progress, you begin playing real tunes and melodies instead of just scales. There are no trick "numbers," no "memory stunts." When you finish the U. S. School of Music course, you can pick up any piece of regular printed music and understand it! You'll be able to read music, popular and classic, and play it from the notes. You'll acquire a life-long ability to please your friends, amuse yourself, and, if you like, make money (musicians are highly paid for their pleasant work).

Whether you like the piano, violin, 'cello, organ, saxophone, or any other instrument, you can now learn to play it in an amazingly short time. By means of this wonderful newly perfected method reading and playing music is made almost as simple as reading aloud from a book. You simply can't go wrong. First, you are told how a thing is done, then a picture shows you how, then you do it yourself and hear it. No private teacher could make it any clearer. The lessons come to you by mail at regular intervals. They consist of complete printed instructions, diagrams, all the music you need, and music paper for writing out test exercises. And if anything comes up which is not *entirely plain*, you can write to your instructor and get a full, prompt, personal reply!

The Surest Way To Be Popular and Have a Good Time

Do you sit "on the sidelines" at a party? Are you out of it because you can't play? Many, many people are! It's the musician who claims attention. If you play, you are always in demand. Many invitations come to you. Amateur orchestras offer you wonderful afternoons and evenings. And you meet the kind of people you have always wanted to know. So don't miss this exceptional opportunity.

High School Course in Two Years!

You Want to Earn Big Money!

And you will not be satisfied unless you earn steady promotion. But are you prepared for the job ahead of you? Do you measure up to the standard that insures success? For a more responsible position a fairly good education is necessary. To write a sensible business letter, to prepare estimates, to figure cost and to compute interest, you must have a certain amount of preparation. All this you must be able to do before you will earn promotion. Many business houses hire no men whose general knowledge is not equal to a high school course. Why? Because big business refuses to burden itself with men who are barred from promotion by the lack of elementary education.

Can You Qualify for a Better Position

We have a plan whereby you can. We can give you a complete but simplified high school course in two years, giving you all the essentials that form the foundation of practical business. It will prepare you to hold your own where competition is keen and exacting. Do not doubt your ability, but make up your mind to it and you will soon have the requirements that will bring you success and big money. **YOU CAN DO IT.**

Let us show you how to get on the road to success. It will not cost you a single working hour. Write today. It costs you nothing but a stamp.

Not Only Men Who Have Made Millions Send for this Astonishing Book -but Thousands of Others!

Many successful business men have sent for this amazing book NOW MAILED FREE. Such men as Walter C. Ford, of the Ford Manufacturing Company; C. F. Bourgeois, President of Robischon and Peckham Company; H. B. McNeal, President of the Telephony Publishing Company, and many other prominent, prosperous business executives, are unstinting in their praise of it. But don't think it is only for big men. Thousands of young men have found in this book the key to advancement in salary and position, popularity, standing, power and real success.

Today business demands for the big, important, high-salaried jobs men who can dominate others. It is the power of forceful, convincing speech that causes one man to jump from obscurity to the presidency of a great corporation. Another from a small, unimportant territory to the sales-manager's desk. Another from the rank and file of political workers to a post of national prominence as a campaign speaker. A timid, self-conscious man to change almost overnight into a popular and much-applauded after-dinner speaker.

Either You Become a Powerful Speaker —or Your Training is Free

You are shown how to conquer stage fright, self-consciousness, timidity, bashfulness and fear—those things which keep you

What 15 Minutes a Day Will Show You

- How to address business meetings.
- How to propose and respond to toasts.
- How to make a political speech.
- How to tell entertaining stories.
- How to write better letters.
- How to enlarge your vocabulary.
- How to develop self-confidence.
- How to acquire a winning personality.
- How to strengthen your will-power.
- How to be the master of any situation.

silent while men of lesser ability get what they want by the sheer power of convincing speech. You are told how to bring out and develop your priceless "hidden knack"—which will win for you advancement in position and salary, popularity, standing, power and real success. This simple, easy, sure and quick training is guaranteed to do this—or it will not cost you a single penny.

Only 15 Minutes a Day Required

There is no mystery about the power to work wonders with words. It makes no difference how embarrassed or self-conscious you now are when called upon to speak. Certain

principles will show you how to rise head and shoulders above the mass and make yourself the dominating figure in any gathering. How to rise to any occasion and demand what you want with force, vigor and conviction. Give only fifteen minutes a day in the privacy of your own home and you can accomplish all this in a few short weeks.

Make This FREE Test

If you will fill in and mail the coupon at once you will receive this remarkable new book, "How to Work Wonders with Words," which gives you an amazing test by which you can determine for yourself in five minutes whether you are one of the seven men out of every nine who possess the "hidden knack" of powerful speech, but do not know it. Decide for yourself if you are going to allow fifteen minutes a day to stand between you and success. Thousands have found this to be the biggest forward step of their lives. If it has played such an important part in the lives of many big men, may it not in yours?

"They've tripled your salary, dear"

"I TELL you, Tom, it was a lucky day for both of us when you sent in that I. C. S. coupon. You'd never be where you are today if you hadn't decided to study in spare time just when you did."

Spare-time study with the I. C. S. is winning promotions for thousands of men and bringing happiness to thousands of homes all over the world. In offices, shops, stores, mines, mills and on railroads, I. C. S. trained men are stepping up to big jobs, over the heads of older men, past those whose only qualification is long service. There is a job ahead of YOU. Some man is going to be picked for it. The boss can't take chances. He is going to choose a trained man with sound, practical knowledge of the work.

Get busy right now and put yourself in line for that promotion. You can do it in spare time in your own home through the International Correspondence Schools, just as thousands of other men and women have done.

DRAFTING PAYS from \$3,500 to \$10,000 a Year

Well Paid Positions ~ \$75 a Week up

Machine Shop or Mill—Railroading or Radio—Electric Companies or Public Service Stations—Building, Engineering, or Mining—All of the World's Work Calls for Draftsmen—All Interesting and Easy for the Draftsman—The Field that Leads Them All Will Always Be Drafting

\$20 A DAY If a hundred dollars a week sounds big—yes, or \$150—you aren't in the right line of business! Get into a broader field—the broadest of all. That's drafting!

Drafting is the BIG field, men. Every industry you can name **BEGINS** with the draftsman. Without mechanical drawings—by the thousands—every shop in the land would be STOPPED.

In fact, it is the **SERIOUS SHORTAGE** of draftsmen that brings this offer: *I will furnish all instruments, supplies, even to the table, to those who start now!*

PAY AS YOU GO Don't give me the excuse that you have no ready money for this golden opportunity. I am not so interested in *cash*; I want your *application*. I want at least 200 men to start *right now*. I want them ready to recommend by Spring! We will get a flood of letters saying "send us draftsmen," from every sort of industrial and engineering concern, and we *must* make good.

The first week's pay envelope of many a Dobe-trained draftsman has held enough to cover the entire cost of the course! Most students learn evenings, keeping on with their old work until ready to step into somebody's drafting room. The first month equips you to take on simple drafting jobs on the side. It helps you learn; I gladly permit this.

Well-Paid Positions Every Way You Turn

A draftsman soon forgets the days when he used to wonder where to get a job. Instead, he asks "What line of work interests me most?" And "What part of the country suits me best?" Twenty of my graduates went to Florida this year; three are in Japan; last month one wrote me from Ceylon. And I wish we had the count of how many Dobe draftsmen have become chiefs!

Positions loom up almost as soon as you are enrolled in a Dobe class! We receive requests *daily* for men—for men only partly through our course. "We'll take a *beginner*," some concerns write us, "so long as he is a Dobe trained man and has begun *right*!"

IT'S EASY and interesting to learn drafting. For drafting isn't "drawing!" You don't need any "talent." A draftsman uses *tools* for every line and every curve. That's why drafting is so easily learned—and so interesting. *For you do everything by rule*. So, I guarantee if you can read and write, you can learn this line.

WARNING! The special offer of tools is for immediate action. Don't expect me to hold it open indefinitely. Clip the coupon *now* for free book:

Not a dollar's extra expense for tools, if you are prompt

GOOD FOR TOOLS

Mail this **IN TIME** for my **FREE TOOL** offer and **ENTIRE WORKING OUTFIT** costs **NOTHING** extra, if you decide to **ENROLL!**

CHIEF DRAFTSMAN DOBE

1951 Lawrence Ave., Chicago, Dept. 13-57

Please send **FREE** and **POSTPAID**, without obligation, your new, fully illustrated book **Successful Draftsmanship**, complete information, terms, etc.

Name..... Age.....

P. O.

"Have completed \$100,000 worth of work this year, thanks to Dobe instruction."—D. E. SANDERS (S. Car.)

"My new chief says, Dobe must teach right; I can handle everything so far. They pay me \$65 a week."—LEO NIECEBERGER (Pa.)

"Just been made chief and got good boost in pay. Your course has the goods."—Wm. G. BAZARETT (Cal.)

Play the HAWAIIAN GUITAR and be Popular!

Play all the latest hits just as the Hawaiians do. Be the most popular member of your set. Get in on all the good times. Entertain your friends—or play professionally. Be in demand everywhere. We will help you.

\$15
HAWAIIAN GUITAR
with Genuine Seal Grain
Fabrikoid Cover
FREE
when you enroll

This sweet-toned, mellow Hawaiian Guitar would cost you at least \$15 in any music store without the Genuine Seal Grain Fabrikoid Case. We can afford to give you the entire outfit free when you enroll, including picks, steel playing bar, etc., because we make them in huge quantities in our own factory. Nothing to buy—everything is furnished.

Learn in Spare Time at Home

You study in spare time—when you like—as long as you like. And even if you don't know one note from another, our method is so simple, plain and easy that you begin a piece your first lesson. In half an hour you can play it!

Famous Native Hawaiians Teach You

You receive expert instruction from such world famous players as Kolomoku, Kalaluki, Ferara and Seville. They quickly teach you the secrets of this fascinating instrument.

Complete Conservatory Course. You get 52 complete printed lessons. Nothing is omitted. Pictures explain every move. And no matter how little you know about music when you begin, no matter if you have never touched a musical instrument, you can positively learn to play by our plain, easy, picture method.

Only 4 Motions to Learn

Then you can play any music—popular songs, classical, old-time melodies, native Hawaiian airs—or real jazz—separately or with accompaniment. You'll never be lonesome after you learn to play on this beautiful Hawaiian Guitar.

Pay as You Play

We make it easy for you. You start any time—with a small first payment—then pay while learning. Write for liberal offer.

Our Written Guarantee

We guarantee in writing to teach you. 45,000 successful students. And we coach and advise you after graduation—no extra cost.

Other Courses under famous teachers—Tenor Banjo, Violin, Mandolin, Banjo Ukulele and Ukulele.

IN DRAWING CARTOONS

Why spend your time doing work that is drudgery, and get little money for it when you can enter this well paid profession? You can learn cartooning at home with this amazing easy method, which teaches you to draw cartoons that sell. You can also earn while you learn.

A steady income—\$3,000 to \$15,000 a year—your own boss—easy hours—no off seasons—that's the life of a good cartoonist. Right now you may be earning only a pitifully small salary—but with this training you can easily be on easy street—independent. There's always a demand for good cartoonists.

Easy to Learn Cartooning At Home in Spare Time

There is a knack about learning cartooning which you can master in your spare time with this simple home study method. It starts you at the very beginning—on simple fundamental principles—then takes you through every branch of humorous and serious cartooning. You will be surprised how quickly you can draw cartoons that will sell. Many earn even while learning.

Send for Free Book

Get this handsomely illustrated booklet which gives the details of this remarkable home study course in Cartooning. Gives thorough outline of the cartooning field and market for cartoons. Shows how to become a cartoonist. No obligation. Send for it today.

Send for my **FREE BOOK**—Right Now. **TO-DAY!**

LIONEL STRONGFORT
Physical and Health Specialist for over 25 Years

STRONGFORT INSTITUTE

Dept. 236, NEWARK, NEW JERSEY, U. S. A.

YOU—like every other man worthy the name of "man"—have a burning desire to be strong—to be dynamic—to be vigorous—to be capable of defense—to be an outstanding figure—admired and respected by men and women. You know the penalty of weakness. You know that the skinny fellow with hollow chest and sallow face—like the flabby fellow with too much stomach and too little wind—is a ridiculous object, laughed at and despised—undesirable in company, unsought as a companion.

You don't have to be one of this kind. You can be a real 100 per cent. man. You can be just such a man as any one of the splendid fellows I have instructed. The world holds no parallel for the work I have accomplished in upbuilding weak men. And what I have done for others I can do for you through **STRONGFORTISM**—my world famed Course of health and strength building.

STRONGFORTISM

Will Do Wonders For You

I have made powerful men out of mere weaklings and many have become nationally famous. You may not seek tremendous strength. You may not want to become a professional strong man. But you do want good health and manly strength—every man wants that! You want energy and vitality. You want a clear, unflinching eye and a steady nerve. You want courage, "sand" and pep! And you can get all these by following in the paths in which I have directed thousands—you can be a real man. Above all, you can rid yourself of disheartening weaknesses and blighting ailments such as constipation, indigestion, rheumatism, high blood pressure, nervousness, lassitude, insomnia, catarrh, chronic colds, etc. if you are so afflicted.

Vibrant Life Awaits You

Many young men write me the most pathetic letters about their sorry plight and their hopeless state of mind. What I reveal to them, what I do for them, transforms their lives, makes them happy, joyous souls, with an entirely new outlook on life. My methods give to them speedily a bodily feeling so new, so different, so vigorous that they are like men reborn—vibrant with life, bubbling with energy, eager for contact with others, full of ambition and pep. Results are truly marvelous. Thousands testify to this fact. They tell a story of rejuvenation, restoration and rebuilding of the human body that is beyond dispute.

My Scientific Methods Are Beyond Physical Culture

Do not confuse the Science of **STRONGFORTISM** with gymnastic or ordinary physical culture courses. I am not merely a muscle developer. I am far more than that, for I have devised a system that restores sick, ailing, hopeless men to the Glory of Powerful Manhood—to the Summit of Health, Strength, Happiness and Success—without the use of dope and drugs, lifting and stretching machines, unnatural deep breathing, starvation diets, nerve-racking routines or other foolish fads and fancies. What I have done for thousands of others I can do for you.

SEND FOR MY Free Book

The experience and research of a lifetime are contained in my wonderfully instructive book, "Promotion and Conservation of Health, Strength and Mental Energy."

Learn to Play JAZZ by Ear in 90 Days

Be a master of jazz, syncopation, melody. It is easy to learn at home in your spare time. Wonderful Niagara Method shows you how.

By R. C. JAMES

How I used to wish that I could sit down at the piano and pour out the golden syncopation of American melody, like the jazz piano players I had heard. How I used to wish that I could be the popular one in every crowd.

But I could not play a note. I did not know a thing about music.

Niagara Method Shows The Way

Then somewhere—just as you are reading this—I read of the Niagara Method which makes piano playing wonderfully simple. I sent for Director Wright's book "The Niagara Secret." I read the book, and I knew it was right.

I followed Director Wright's principles, and in no time I had caught on to his ideas.

Simple—Easy—Delightful

And the best part of it all is that there is nothing hard about the Niagara Method. In a short time, by following Director Wright's principles and by devoting a part of my spare time to the practical application of his course, I soon learned to play.

No tiresome scales—no arpeggios to learn—no weary hours of practice—no do-re-mi—no meaningless exercises. If you know the Niagara Method, you can sit down and reel off any popular song which the high-priced orchestra leaders play in the cabarets, clubs, hotels, dance halls, or theaters.

Decide to Begin Now

If you have never played a note, or if you do play—no matter how well—you too may become a master of jazz and melody by learning the simple, wonderful Niagara Method.

FREE BOOK

Don't wait another day. Send the coupon now for the "Niagara Secret." This book is yours absolutely FREE. If 10c (coin or stamps) is enclosed you also receive wonderful booklet "How to Entertain at Piano."

Arthur Murray
way!

I'll Make You A Finished Dancer in 10 Days

By **ARTHUR MURRAY**

World-Famous Dancing Authority

I DON'T care how poorly you dance now—I don't care if you've never been on a dance floor in your life—if you can do the simple step pictured above *I'll guarantee to make you a finished dancer in ten days!*

Just think! In ten days' time you will be able to do the Charleston, the French Tango, the Ritz Fox Trot, the Debutante Waltz, and all the other smart new steps—or *I'll return every penny you have paid me!*

That's a fair offer, isn't it? There's no excuse now for playing wallflower—no excuse now for passing up good times because you can't dance! My method of teaching dancing is so simple and easy to understand that you can learn any of the latest steps in one evening, right in your own room, without music or partner. And in ten days' time you will be ready to take your place as the best dancer in your set!

How to Be Popular

You'll never regret being an accomplished dancer! Think what it means to be popular, sought after, admired! The dances I teach you in my course are not only the standardized steps, but also the brand new ones—the peppy, zippy Charleston that has captivated society, the sensational, modern dances that have swept the world!

The sooner you learn to do the new dances, the sooner you start upon this sure path to popularity—the sooner you get some real fun out of life. You'll always be welcome everywhere. Better still, you'll

be in great demand—for everyone wants to dance with the good dancer, the one who knows all the latest steps!

And when you learn by my method—when you have the Murray foundation—it will be easy for you to learn *any* dance. Once you have my training you will be able to follow any music with ease and grace—you will be able to master quickly and easily any dance step after having seen it just once.

Five Lessons FREE

To prove that I can make you a finished dancer in ten days' time, I am willing to send you five lessons from my remarkable course—*absolutely free!* Just send the coupon (with 10c to cover cost of printing and mailing) and these valuable lessons will be forwarded at once. Also a free copy of my new book "The Short Cut to Popularity."

Don't wait—you owe it to yourself to clip and mail this coupon NOW. Arthur Murray, Studio 656, 7 East 43rd Street, N. Y. C.

**ARTHUR MURRAY, Studio 656,
7 East 43rd Street, New York City.**

To prove that I can learn to dance at home in ten days you may send the **FIVE FREE LESSONS**. I enclose 10c (stamps or coin) to pay for the postage, printing, etc. You are to include free "The Short Cut to Popularity."

New Way to Learn

HERE'S BIG NEWS for men interested in Electricity, *men earning less than \$40 a week.* Here's the **QUICKEST** way to an Electrical **EXPERT'S** job at \$60 to \$125 a week. The first announcement of our new, rapid, simplified way to train you at Home in spare time, with **LESSONS, JOB-TICKETS** and **OUTFITS.** *Lessons* which take the mystery out of Electrical principles—*Job-Tickets* which apply what you learn in lessons, and give you step-by-step directions for doing actual Electrical Work. *Outfits* of standard tools and materials with which you **DO THE JOB.** Read this sensational announcement. It opens the way to a better job and bigger pay.

Chief Engineer
Dunlap

1 —with LESSONS!

The laws of Electricity **MADE EASY TO UNDERSTAND.** In simple language, written for the man with only common schooling. Starts you off with the simplest principles, then carries you by easy stages to the advanced work, the Engineering subjects absolutely necessary if you aim to fill one of the **BETTER-PAID** jobs in Electricity.

Seven (7) Electrical Outfits Given!

3 —with OUTFITS!

SEVEN (7) outfits of standard tools and materials now supplied without extra charge to every student. With lessons to explain *why* and job-tickets to tell you *how*, this valuable equipment enables you to get a practical slant on electricity—*quick!*

1. Soldering Kit and Furnace
2. Bell-wiring Equipment
3. Electric light wiring equipment
4. Voltmeter and compass
5. Transformer
6. Radio Receiving Set
7. Power MOTOR

I send the motor to you "knock-down" with job-tickets for wiring the field and the armature. For changing the voltage. For converting it to a Generator. The same kind of work they pay experts big salaries to do.

AMERICAN SCHOOL
CHICAGO

2 —with JOB-TICKETS

Job No. 11 Installing Service Box

A wonderful new system originated at the American School. After you have the **THEORY** from the **LESSONS**, we virtually send you "out on the job" with **job-tickets** and **outfits.** These job-tickets are illustrated, and give one-step-at-a-time directions for doing practical work. They show which materials and tools to use and tell you the **short-cuts** and **new ideas** used by Electrical **EXPERTS.**

ELECTRICITY!

BIG SALARIES

waiting for you in Electricity!

Electricity is one of the greatest, **FASTEST GROWING** businesses you can get into. Leaders like **EDISON, MARCONI** and **INSULL** say it offers bigger opportunities today than ever before, that young men can make more money and climb higher here than in other fields. Even skilled Electricians earn bigger pay than mechanics in other lines. But with my training you can prepare for the **BOSS-JOBS** in Electricity, positions as Chief Electrician, Superintendent of Power Plant, Electrical Draftsman, Electrical Contractor, Superintendent of Electrical Construction, etc. Positions paying from \$250 to \$500 a month and more.

Thousands of Opportunities!

Our Employment Service reports a big demand for trained Electrical men by Electrical Power Plants, Electrical Manufacturing Companies, Telephone, Radio and Cable corporations, by Contractors, Builders and Steamship lines.

FREE JOB SERVICE!

We can frequently help our students find a **beginner's job** in Electricity within a few weeks after enrolling. And in addition, we accept your enrollment with the positive agreement to help you find a well-paid Electrical position within 60 days after completing this training, **or your tuition will be refunded.**

TRAINING built by 23 Noted Engineers

This is no one-man, one-idea school. Engineers from the leading Electrical corporations and Universities have helped me develop this complete home-instruction, men of such high standing, that they would not lend their names to any instructor or school which did not give honest service to every student. Lesson texts prepared by men from:

- | | |
|---------------------------------------|---|
| 1. General Electric Co. | 7. Western Electric Co. |
| 2. Commonwealth Edison Company | 8. Underwriters Laboratories, Inc. |
| 3. Crocker-Wheeler Co. | 9. Columbus University |
| 4. Cutler-Hammer Mfg. Company | 10. Dartmouth College |
| 5. American Telephone & Telegraph Co. | 11. Massachusetts Institute of Technology |
| 6. Westinghouse Electric & Mfg. Co. | 12. Lehigh University |
| | 13. University of Vermont |
| | AND MANY OTHERS |

THE AMERICAN SCHOOL

Now beginning its 30th year of service. Chartered as an **EDUCATIONAL** institution. Not one dollar in profits has ever been paid out, every cent received for tuition has been returned to our students in instruction and service. Over 200 educators, executives and engineers have prepared the instruction we offer. Financial responsibility **ONE MILLION DOLLARS.**

CHIEF ENGINEER DUNLAP, Electrical Division

AMERICAN SCHOOL

**DREXEL AVENUE and
58th STREET
Dept. E-774, CHICAGO**

GUARANTEED TRAINING!

When we accept your enrollment for this wonderful home-instruction in Electricity we give you an agreement in writing, that it will lead to definite benefits in position and salary, *otherwise every penny you have paid will be refunded.* The American School believes home-training, like other things, should be *guaranteed* as proof of its value.

NEW WAY TO START!

Find out if you **LIKE** Electrical work—find out if our lessons and job-tickets are **EASY**

to master. Don't take our word for it—**SEE** for yourself before you decide. **START** with the **COUPON**, below. We'll send you 5 Job-tickets absolutely **FREE**—the same material sent to new students when they pay their money and enroll—to prove that you can learn at home in your spare time—to prove this training is honest, complete and **SIMPLE.** The most amazing offer in the history of home-training to enable you to get

started **IMMEDIATELY** without risking a penny.

Start with the Coupon!

Send no Money

**Chief Engineer Dunlap, Electrical Division
AMERICAN SCHOOL**

Dept. E-774, Drexel Avenue and 58th Street, CHICAGO

Send me please 5 Job-tickets, absolutely **FREE** and facts about the great Electrical business, without obligating me in the slightest degree.

Say Good Bye to Poor Pay!

Several Hundred more trained men needed NOW.

Several thousand more will be needed soon.

Your ONE BEST Opportunity to rise above small pay.

AGE NO BARRIER!

VERY PROFITABLE TRADE NOW OPEN TO ALL

Those looking for a Real Opportunity—good salaries, steady work, dignified and pleasant—demand great now and always will be—a chance to establish a business of your own if desired—can count their search at an end when they merely send us their name to receive full information about

MECHANICAL DENTISTRY

This is not a *new* trade. Dentists today do not have the time to make plates, bridges, crowns, etc., so they employ a mechanical dentist or send this work away to a dental laboratory. There is thus a wonderful demand for Mechanical Dentists—and the demand is only beginning!

IN THREE MONTHS

Easily learned by actual practice—no classes whatever—no previous training required. Ages range from 16 to 50. Opportunity, good pay, and advancement for all. Bodee training is recognized as best by dentists everywhere owing to our 34 years' experience at this work. Bodee-trained men have the ability, skill and knowledge to enable them to easily lead the field.

JUST COMPARE

Compare this with what you are now doing or with the best you can find in any other line! Then compare the unrivalled training we have developed in 34 years' teaching experience—step by step—every point thoroughly covered—no time or effort wasted! Compare also the very reasonable cost with the high charges of the newer and smaller schools which have sprung up!

\$3500 to \$5000

A YEAR

EARN WHILE YOU LEARN

For those who need financial assistance while in training we secure whole or part-time positions to meet their expenses.

OTHER ASSISTANCE

Besides providing the best of training at the lowest possible cost, securing jobs for students who need to earn while learning, giving free R. R. fare, etc., we help you secure good board at moderate price, conduct a Placement Bureau to select suitable positions for graduates and, should

FREE R. R. FARE

To make this exceptional opportunity equally available to all, we pay the student's railroad fare to our nearest school.

you desire to open a laboratory of your own, we assist you in securing a suitable location and equipping your laboratory.

"I Wonder How He Knows So Much!"

How many men do you know who surprise you by the wealth of their general information and the breadth of their knowledge? If you were to inquire, you would find these men make a daily habit of consulting an up-to-date Encyclopaedia. Here they have the knowledge of the centuries—accessible, concisely and plainly stated, easy to grasp and to remember.

Get Your Facts From Nelson's

Every subject on which man would be informed is changing constantly. Nine times out of ten, the information you want is of current issue—a topic of to-day. All Encyclopaedias except Nelson's are deficient in this important and essential thing. The information which is obsolete is worse than none at all. You do not use a City Directory that is two years old. Why use an Encyclopaedia that is five or ten years old? NELSON'S TREATS UPWARDS OF 1,000,000 TOPICS, has 500 maps in color and black and white, and 7,000 illustrations to clarify the text, including text cuts, colored plates, photographs, charts, etc.

Educational Reading Courses

A Reader's Guide to Nelson's Loose-Leaf Encyclopaedia, including thirty-three courses on as many subjects—from Aeronautics to Zoology—is furnished without cost to all subscribers. These courses are declared by educational authorities to be equal to a college course in each of these departments.

Nelson's Free Research Bureau

FOR SCIENTIFIC REPORTS AND SPECIAL INFORMATION AND CORRESPONDENCE. Every purchaser of Nelson's is entitled to free membership in this Bureau. If at any time you are in doubt on any subject, old or new, write to this Bureau with the positive assurance that you will promptly receive the latest obtainable and most dependable information.

An International Editorial Staff

NELSON'S PERPETUAL LOOSE-LEAF ENCYCLOPAEDIA—the Great American Standard Reference Work—is complete in 12 handsome volumes and new Index Volume. Its staff of upwards of 1,000 contributors includes men and women foremost in scientific, professional and public life, who are practically eye witnesses of that which they write. The Index of 900 pages embraces more than 200,000 references, immensely increasing the value of the Encyclopaedia. It is the Key which unlocks thousands of hidden treasures in Nelson's.

Get Into This

Are you ambitious? Are you seeking a better job or a business of your own? If so, here's your chance—a chance to really cash in. There are more amazing money-making opportunities in the automobile business now than ever before. Follow the lead of the thousands of "Michigan State" graduates. They

have already proved what real training will do for an ambitious man. They are making big money. You can too!

This school has over 20,000 graduates. Come to Detroit, a fine city. Big business, pleasant climate all year around. Come now, and fit yourself for a better job or to run a garage business of your own. Thousands of battery shops, auto electrical shops, tire and welding shops are needed now. Only trained men can run them. Good work is what car owners want, and it takes a trained man to do it.

LEARN THE AUTO BUSINESS IN THE HEART OF THE INDUSTRY

Without any previous experience—just a liking for mechanics—you can learn the auto business from A to Z in a few weeks at the Michigan State Automobile School—the factory-endorsed school in Detroit—the heart of the industry. Then step out, equipped with knowledge and training, to a future of certain, big money making. You have great advantages, learning the business here. It's the fountain head of the

automotive industry. You are taught under factory-endorsed methods. You learn both theory and practice on latest equipment. Go through the great Ford plants. Visit the other auto factories. Learn their methods first hand—and it all means greater opportunities and more certain success. The Michigan State Automobile School, in Detroit, the automobile center, is the logical place to learn the auto business.

Detroit-Trained Auto Men Earn More Money

Detroit-trained men are preferred. Your diploma from the "Michigan State" is a valuable money-making asset. The Michigan State Automobile School is known the world over. Wherever autos are used—Detroit-trained men get the best jobs, highest pay. Auto, truck, tractor factories employ M. S. A. S. graduates. Leading factories, dealers, service stations, garages, shops and farms want men who have trained their heads as well as their hands—the M. S. A. S. Detroit-kind.

Start Now! A thorough training in Detroit, at the "Michigan State," fattens the pay envelope or starts you in business for yourself. You can take a full Automotive Course in 12 weeks. Or our great Master Course in 30 weeks. Or specialize in any of its money-making branches; be an Auto Electrician, Battery Service Man, Engine Man, Welder, Tire Expert, or Machinist. All courses include training in Business, Shop Management, Service, Selling, etc., by one of the big men from Detroit's auto plants. Classes always open. You can start at once.

Earn While You Learn If necessary we can assist students to secure part time work to earn a small amount each week. Or students who wish to take our evening course will be assisted to full time day jobs. Ask for details, and when writing, please explain your circumstances fully.

Life Scholarship Your enrollment entitles you to life membership, with privilege of our service any time you want it. Many students come back to

brush up on latest ideas and new equipment. It doesn't cost a penny extra. The position of the Michigan State (The Detroit Auto School) in the heart of this industry, assures most thorough, most practical, systematic training, at a cost so low and terms so easy that any man, anywhere, can afford it.

PRESIDENT of your concern is what many S. of E. men prefer. We help and advise you to start in business for yourself. New opportunities in every town.

30 DAYS FREE Resident training is my reward when you finish your course, if you wish to accept. Complete details when you send coupon.

I'M IN TOUCH with the electrical industry every day, men, and take my word for it, there's never been anything like the present. Concerns are asking for men every day. Our training satisfies you or MONEY-BACK. I help you get the job, too.

ELECTRICITY is booming! and the shortage of trained men is the only reason we're making this special offer. Every kind of concern you can think of depends on Electricity and new opportunities open every day—power plants, electric railroads, electric refrigeration, battery and central stations, etc.

CONCERNS are looking to me to supply them with men. No matter what you are doing now, or how much money you have, we can train you without disturbing your present work. We bring complete expert's equipment right to you and give you the training you need to get a real job. Even screw-driver electricians make record money now. But my men, with expert training get the call for really important jobs. Just a few fascinating hours a week right at home.

BE INDEPENDENT with an electrical training. In a few months you are a graduate **ELECTRO-TECHNICIAN** with signed diploma that opens the door for you anywhere in the electrical field. S. of E. men are everywhere succeeding. The big concerns like Harnischfeger Corp'n., Cutler-Hammer, Allis-Chalmers, Commonwealth-Edison all endorse our training and try first to get our men.

NO SPECIAL TALENT or training is required for success and big money in Electricity. There's a right way to do everything in electricity. We give the tools and equipment and show you the right way. When you get on the real job you're right home because it's no different. Many of our boys are in their teens—some are men past 50—but all multiply earnings with this easy training. Give me a chance to do it for you.

**GIVE ME A CHANCE TO SHOW
 WHAT I CAN DO FOR YOU!**

"I guarantee to stand behind you and make you a success in ELECTRICITY. For 22 years I've helped men get a start. Just give me a chance. Mail the coupon today—without fail."

OSCAR WERWATH, President.

DON'T FAIL TO MAIL ME!

"He Used to Belong to Our Crowd"

"He's the only one of the old gang who made good"

"That's Bob Thompson, sales manager for Fink & Snyder. They say he makes \$15,000 a year."

"Yet it hasn't been long since he wasn't making more than \$35 a week. I know, because he used to belong to our crowd. There were six of us and there was hardly a night that we didn't bowl or shoot pool or play cards together."

"Lots of times we would sit down and talk about earning more money, but that's all it ever amounted to—talk! Bob was the only one who really did anything."

"I'm through wasting my spare time like this," he said one night. "I'm going to take up a course with the International Correspondence Schools and try to make something of myself before it is too late."

"We didn't see much of Bob after that—he'd always laugh and say he was 'too busy' when we'd ask him to join a party."

"Look at him now. A big man in a big job. Making five times as much as I'll ever make. Oh, what a fool I was not to send in that I. C. S. coupon when he did!"

How much longer are you going to wait before taking the step that you know will bring you advancement and more money? Aren't you tired working for a small salary?

It takes only a moment to mark and mail this salary-raising coupon and find out what the International Correspondence Schools can do for you. Surely it is better to send it in today than to wait a year or two years and then realize how much the delay has cost you. "Do it now!"

Mail the Coupon for Free Booklet

LEARN WATCHMAKING BIG PAY! Big Demand for SKILLED WATCH REPAIRERS

Big pay envelopes are waiting, throughout America, for skilled watch workers, repair men on all makes of watches, and engravers. The demand far exceeds the supply and is greater now than at any time in history.

The Elgin Watchmakers College has graduated more certified watchmakers—with degrees conferred by Horological Institute at Washington—than any other school. The College was founded and financed by the Elgin National Watch Company, hence students have access to the world's greatest watch plant for practical observation and actual work-bench study.

If you are frittering away precious time in poorly paid work, resolve to learn this highly lucrative trade now. And don't delay—for the few available vacancies in the Elgin Watchmakers College Fall enrollment will be filled rapidly. Write for catalogue today.

Address Dept. 26, ELGIN WATCHMAKERS COLLEGE, Elgin, Illinois. An endowed college—not operated for profit.

From \$1,800 to \$10,000 in Four Years

Thanks to Higher Accountancy

"LaSalle training in Higher Accountancy has enabled me in four years to increase my business more than 500 per cent." So writes John H. Lansing, Public Accountant, Income Tax Specialist, and prominent citizen of Amsterdam, New York, who deliberately resigned as purchasing agent for a large carpet manufacturing company to start on his own as a Public Accountant.

Mr. Lansing was 43 when he enrolled with LaSalle, and at the time was earning from his newly adopted profession less than \$2,000 a year.

Today, the firm of which he is head is auditing the books of 100 business houses, including 20 corporations; and his Income Tax Department has more than 500 clients. Each year his business shows a healthy increase.

"When you consider that the average bookkeeper does not receive over \$40 a week," writes Mr. Lansing, "it is obvious that \$10,000 a year has advantages well worth the consideration of any ambitious man or woman. I shall always be grateful to LaSalle for the help it has given me in building a greater income."

Send for This Book—It's Free

Do you appreciate what Accountancy means in the business world? Do you realize that it constitutes the indispensable foundation for success in any business undertaking? Would you seriously fit yourself for positions paying \$3,000, \$5,000, \$10,000 a year and even better?

LaSalle has prepared a 64-page book entitled "Accountancy, the Profession that Pays." The information it contains is of very real and definite value. It will pay you well to read it. And—LaSalle will send it to you free.

Balance the two minutes that it takes to fill out the coupon against the rewards of a successful career—then clip and mail the coupon—NOW.

— — — Find Yourself Thru LaSalle! — — —
LASALLE EXTENSION UNIVERSITY

\$25.00 DRAWING COURSE for \$2.98

Haven't you often wished that you could draw cartoons illustrate some idea, sketch some pretty face, etc. You can do all of these things. One of America's most famous Cartoonists and Illustrators has developed a great, simple system for success in all branches of Commercial Art. This system has revolutionized the entire theory of drawing. It means that drawing can be as easy for you as writing—much simpler than learning shorthand, bookkeeping or typewriting.

We are now placing this original system for learning Drawing, Art and Cartooning within reach of every one. If you will devote a few hours each week to the Course WE ABSOLUTELY GUARANTEE that you will learn to draw and draw well before you have half finished the Course. If we fail to make this claim good, we will refund every cent paid us. By eliminating a large office force for answering correspondence, expensive catalogs, etc., we are enabled to make a price of \$2.98 the cheapest price ever known for a high-grade home study course. Many have sent us letters similar to that of Rob't P. Davis of Detroit, who wrote "I can't see how you ask so little, when others with inferior Courses get from \$20 to \$60 for theirs. It is more than I expected." Learn to draw. It is a big asset, no matter what field you are in.

Send No Money

Just order the course, and \$2.98 on arrival pay postman plus a few cents postage, payment in full for the entire Course and Free Drawing Outfit. If not entirely satisfied, return within five days and we will REFUND MONEY. Address:

FREE: If you order the course at once, we will include a drawing outfit, consisting of artist's pencils, pens, paper, erasers, thumb tacks, etc., enabling you to go to work without any additional cost.

LEDERER SCHOOL OF DRAWING, Dept. 1950-U, Chattanooga, Tenn. Orders from outside the U. S. A. are payable \$3.28 cash with order.

BOOK FREE—SEND COUPON

Even the United States Government endorses S. of E. training. At left is shown huge generating unit made by Harnischfeger Corporation for Panama Canal for which S. of E. students made the Acceptance Test by special request.

Get a better training in America's Electrical Center—Milwaukee. Concerns like Nordberg Mfg. Co., Harnischfeger Corp'n., etc., are the leaders.

22 YEARS TEACHING THE ONE RIGHT WAY

DON'T WASTE another minute getting into the fascinating field of electricity. Never before has there been so many amazing opportunities. Electric refrigeration, radio battery work, central stations, power plants, are combing the country for men with electric training.

\$3200 AND UP with amazing opportunity for advancement awaits you in this most fascinating business of all. S. of E. training will prepare you in a few weeks time to step into a fine electrical job in a big corporation like General Electric, Western Electric, Commonwealth-Edison, Harnischfeger Corporation.

THE BIG CONCERNS are the ones who offer the big opportunities. And they prefer S. of E. men because 20 years experience has shown that they are the ones who succeed. The finest engineering talent available directs your work in classroom. They are big men like Prof. John D. Ball, for six years

CHARLES P. STEINMETZ electric wizard of General Electric was for the last six years of his life on the Advisory Council of School of Engineering.

assistant to Dr. Steinmetz, the electric wizard.

THREE MONTHS FASCINATING

training fits you to enter the big job with one of these concerns or go into business for yourself. Thousands of opportunities exists in every section for men with a little training to do house-wiring, operate battery service stations, to do automotive electrical work. In three months time S. of E. training gets you ready for the amazing opportunity of a lifetime.

S. of E. MEN GET PREFERENCE everywhere that men are hired for electrical work. For in nearly every electrical concern in America S. of E.

men will be found holding big jobs. They are on the lookout to help you succeed when you come in. In one of the 10 largest American cities the 3 biggest electrical jobs are all held by S. of E. men. To be an S. of E. man means prestige—preference!

ACT NOW BEFORE CLASSES FILL UP. Due to the enormous amount of personal attention given to each man, S. of E. classes fill up rapidly. Employers ask first for the S. of E. man. We suggest immediate action to avoid disappointment.

SPECIAL BOOK NOW FREE—Act! Clip and mail the coupon right away. A big 72 page book telling all phases of S. of E. training will be rushed to you. Get it by all means to help make up your mind. The most complete book on opportunities in electricity ever offered.

CLIP AND MAIL COUPON NOW! A PERSONAL CHALLENGE TO YOU

"Whatever your previous education our training will make you successful in Electricity! Put yourself in my hands for a few weeks and the big job is yours."

OSCAR WERWATH, Faculty President

You will find and enjoy a different spirit among S. of E. students than you find in the "trade schools." Good times mixed with work. Fraternities, daily broadcasting from Station WSOE. Above is photo of the student parade.

Men who make good are S. of E. Trained

"Thanks to the training you gave me I have never had difficulty in obtaining or holding very desirable positions. I am in the radio game and am bringing sound engineering principles to bear on the many problems that are usually solved by 'cut and dried' methods."—Waldorf A. Smith, Research Engineer, Carter Radio Co.

W. A. Smith

C. R. Lund

"The benefit of your training can best be attested by the product of the school. It is significant that the majority of S. of E. graduates obtain noteworthy and remunerative positions within a short space of time which is almost entirely due to the training received at their alma mater."—C. R. Lund, Electrical Engineer, Harnischfeger Corp.

School

The American School

A million Dollar *No-Profit* Educational Institution, now offers men a *double service*—training for a specific job, then help in finding the job. For one small price, on terms of only \$5.00 a month, you are now assured of definite benefits, both in position and salary. Write for complete information—*today!*

No machine can be built until the Draftsman first builds it on paper. My training prepares you for this work.

Has the world seen any-
like the building boom of
This has created engi-
neers and for real Drafts-

5 BIG-PAY Branches

The big money in Drafting goes to men who specialize in Machine Design, or Electrical Drafting, or Architectural Drafting, or Structural, or Automotive. It is not enough merely to know general Drafting practice. You must know how to calculate and design and plan original work. You need many Engineering subjects to fill the kind of a Drafting position that pays \$60 to \$125 a week. The American School now includes this specialized training in its Drafting course.

Costly Drafting Outfit Given!

Fine, imported instruments like these help you learn Drafting quickly and easily. These standard quality, full size instruments, board, table, triangles, T square, ink, protractor, etc., given to every student without extra cost.

O. C. Miller, Director Extension Work

AMERICAN SCHOOL

3 Drafting

to prove you can

We have invented a new, simplified way to teach Drafting—the first real improvement in Drafting home instruction in history. We want you to see a few of these new Job-lessons, try them, test your own ability to master them—without one penny of cost or obligation. For instance, you will see how we get away from the “copying” methods used in the past, so you develop into a DRAFTSMAN, instead of a “tracer.” See for yourself the ingenious new method which compels you to think, to solve problems, to do actual Drafting-room jobs from the very first lesson!

A New, Rapid, Simplified Training

Copying drafting lessons prepares you to be only a “tracer.” This new “Job-Method” gives you actual drafting-room jobs in a new one-step-at-a-time way. With pictures which you can understand almost without reading the “lessons.” And that is why the American School-trained Draftsmen can qualify for a good job at big pay when they graduate.

Win Success Thru Drafting

Drafting is easy, fascinating work. Short hours. Big pay. And the Draftsman is always in line for promotion to executive positions. This training is complete. It includes high school subjects (if you need them) and all the Engineering and Mathematical Drafting expert requires.

FREE Job Service

The American School now offers its students and graduates, without cost, the service of an efficient employment department keeping in constant touch with employers of Draftsmen all over the U. S. We have placed hundreds of men in good, big-pay Drafting positions. We've made this training so complete, so practical, so easy to master, that our students are bound to make good. And so, because the demand for real Draftsmen continues to exceed the supply and because this training actually prepares men for good Drafting positions we back it with a Free Employment Service.

Read These Letters!

City of Chicago
Department of Buildings
Gentlemen: The same day I received my diploma I got word that I was one of the two candidates who had successfully passed the examination for Deputy Commissioner of Buildings of the City of Chicago, a position paying \$3600 per year.

There were eight applicants examined besides myself, all men well known to the architectural and engineering profession. Seven of these failed to obtain a passing grade of 70%. My grade was 84.69. Inasmuch as I failed to pass this same examination three years before, my present success is mainly due to the knowledge gained through your School.

Yours very truly,
ROBERT KNIGHT

Got His Draftsman's Job

"I wanted to let you know how I came out in getting that job at the Brownell Co., Dayton, Ohio. I was to start and have a trial at Drawing, and I am still in the Drawing room. The engineer seems to like the work I make, and also the other draftsmen. I thank the School very much for getting me in at this place. Because your letter of recommendation helped me a whole lot to get the job."

BERNARD WEBER,
730 St. Nicholas Ave., Dayton, O.

Liberty High School
Bethlehem, Pa.

Dear Sirs:—This is to thank the American School for all that you have done for me since I signed up for the Drafting and Design Course.

In the eight years since then, I have gradually climbed from the position of tracer to that of Head of the Department of Machine Drawing and Design in our magnificent new \$2,000,000 High School here, at many times the salary which I received at that time.

The officials of the Pennsylvania State Department, and Dr. Wm. C. Ash of the University of Pennsylvania, all claim that our course in Drafting and Design is the best now being taught in this state. Every drafting graduate that we have turned out has proved successful, and one is now Chief Draftsman in a local steel concern. Yours sincerely, **J. S. LEAR**

Has Charge of Large Jobs

"Even before I had finished my course, I was put in charge of large construction jobs in different cities. I have been doing that ever since, and the jobs are getting larger all the time. I owe my success to the American School because of the knowledge I gained in mathematics and calculations."

ELMER L. LAMB,
1306 Smith St., Peoria, Ill.

Electrical Experts are in Big Demand!

It's a shame for you to earn \$15 or \$20 or \$30 a week, when in the same six days as an Electrical Expert you could make \$70 to \$200—and do it easier—not work half so hard. Why then remain in the small-pay game, in a line of work that offers no chance, no big promotion, no big income? Fit yourself for a real job in the great electrical industry. I'll show you how.

**I Will
Train You at
Home for a
Big Pay Job**

**5 Big Fine
Outfits
to work with
No Extra Charge**

With me, you do practical work—at home. You start right in after your first few lessons to work at your profession in the regular way and make extra money in your spare time. For this you need tools, and I give them to you—5 big complete working outfits, with tools, measuring instruments, and a real electric motor—5 outfits in all.

Be an Electrical Expert Earn \$3,500 to \$10,000 a Year

Today even the ordinary Electrician—the “screw driver” kind—is making money—big money. But it's the trained man—the man who knows the whys and wherefores of Electricity—the Electrical Expert—who is picked out to “boss” the ordinary Electricians—to boss the big jobs—the jobs that pay \$3,500 to \$10,000 a year. Get in line for one of these “Big Jobs.” Start by enrolling now for my easily learned, quickly grasped, right-up-to-the-minute, Spare-Time Home-Study Course in Practical Electricity.

Age or Lack of Experience No Drawback

You don't have to be a College Man; you don't have to be a High School Graduate. As Chief Engineer of the Chicago Engineering Works, I know exactly the kind of training you need, and I will give you that training. My Course in Electricity is simple, thorough and complete and offers every man, regardless of age, education, or previous experience, the chance to become, in a short time, an “Electrical Expert,” able to make from \$70 to \$200 a week.

Your Satisfaction Guaranteed

So sure am I that you can learn Electricity—so sure am I that after studying with me, you, too, can get into the “big money” class in electrical work, that I will guarantee under bond to return every single penny paid me in tuition, if, when you have finished my Course you are not satisfied it is the best investment you ever made. And back of me in my guarantee stands the Chicago Engineering Works, Inc., a two million dollar institution, thus assuring to every student enrolled, not only a wonderful training in Electricity, but an unsurpassed Student Service as well.

FREE Book on Electricity

I want to send you my Electrical Book and Proof Lessons, both Free. These cost you nothing and you'll enjoy them. Make the start today for a bright future in Electricity. Send in Coupon—Now!

Address Popular Mechanics Press, Room 810, 200 E. Ontario St., Chicago.

Automobile Experts in Demand

*Study with the same school that helped
to train many leading men in the
automobile industry*

THE best proof of the value of the home-study courses of the International Correspondence Schools is the success of I. C. S. students. This success is especially apparent in the automobile industry.

Jesse G. Vincent, Vice-president of the Packard Motor Car Co., is a former I. C. S. student. So is Walter P. Chrysler, President of the Chrysler Corporation. E. V. ("Eddie") Rickenbacker, Vice-president and Director of Sales of the Rickenbacker Motor Car Co.; Hiram Walker, Chief Engineer of the Chandler Motor Car Co., and John Moore, designer of the famous Ansted Motor, are also former I. C. S. students.

The first step they took was to mark and mail an I. C. S. coupon similar to the one printed below. Make your start the same way and make it right now. We'll gladly send you complete information about the I. C. S. Automobile Courses or any other course in which you are interested.

FREE This New Book

Tells how, with \$5 to start, I made more than \$100,000, as a Real Estate Specialist. Tells how I help other ambitious men and women make big money my way. Tells how you, *yourself*, can learn the secrets of my success—use my money-making system—build up a big-profit business of your own—right at home—in your spare time. Send at once for this intensely interesting book of fascinating facts and positive proof of amazing success.

WHEN I say that this new book tells you about a way to make *big* money—that's just what I mean—**BIG MONEY!** D. H. Garrett made \$630 his first week. F. W. Hovey made \$1,500 in one deal. H. G. Stewart made \$14,400 in less than a year. L. C. Clarke cleaned up \$4,500 in one transaction. And other wide-awake men and women are making more money in the Real Estate business than they ever dreamed possible.

But don't take my word for it—don't take *anybody's* word. Get the free book of *facts* and *proof*. It doesn't cost a penny. Yet it can be worth more to you than any other book you ever owned.

You will find this book one of the most amazing books of business opportunity you ever read. It tells just how you can get into Real Estate—the business of a million opportunities—where

Proof!

"It may astound some to know that I have made between \$8,000 and \$10,000 in three months, which may be directly attributed to your splendid Real Estate System."—A. W. Fosgreen, New York.

"I have been helped a great deal by your system. I have a new car, two typewriters, stenographer and dandy office, and money in the bank, all through my own efforts without any capital to start."—Alice Moore, Conn.

"I was a Ford salesman earning \$300 a month. Your System increased my earnings 200%. I now own a Chrysler Sedan, up-to-date office equipment and have increased my bank account."—Alfred J. Bennett, Mich.

"Your System is wonderful. Without giving up my job as stationary engineer I made \$900 in three months in my spare time."—Matthew J. Stokes, Penna.

"Connected with a firm that employs one hundred men. Have earned over \$2,300 this month."—E. M. Coffey, New Jersey.

trained men often make as much in *one deal* as the average man makes in *a whole year of hard work*.

Why be satisfied with small pay? Why be content with \$20, \$30, \$40 a week? Why struggle along, year after year, on an in-

come too small to meet your needs? Why keep plodding along in a business that is limited in its opportunities—a business that offers you no attractive future—no chance to make really big money?

There is no room here to tell of the money-making opportunities that Real Estate holds for you. So, get my free book—and *get it now*. It contains facts you can't afford to miss—positive proof of what I have done—what others are doing—and what you, yourself, can do.

Fill out the coupon at the foot of this page. Tear it out and mail it. Then you will receive—without charge—your copy of this book of business opportunity, which points a straight, sure path to a better business life and a bigger bank account.

Don't wait. Don't delay. Don't cheat yourself out of this big chance to make big money. Get the facts—the brass-tack facts—before it is too late. American Business Builders, Dept. 44-J, 18 East 18 Street, New York.

Free Employment Service

Real estate corporations, subdivision operators, auctioneers, realty bond houses, building and loan associations, insurance companies and others requiring trained representatives (men or women) should register at once for our free employment service. Address—Business Development, Dept. 44-J, 18 East 18 St., New York.

PLAY A SAW!

I'll Teach You in 24 Hours

Be Popular!
Amaze Everybody—
Play for Fun or Money

Wonderful music from a saw—sweet and mellow like a rare old violin. Tone effects that are positively startling—all so unexpected that nothing compares with it in winning instant popularity in your social group or as a salaried entertainer. *And it's so easy!*

Just to prove how quickly you can learn, I'll send you a genuine "Musical Saw" (special temper, process patented) for FIVE DAYS' TRIAL. I guarantee that in 24 hours you can play tunes like "Old Black Joe" and "Home, Sweet Home." Then the latest jazz and song hits, operatic and classical music. Amazingly simple—no notes to read, no dreary practice.

Thousands Successful by My Method

Just three short, simple lessons reveal every secret of my 12 years' success as a professional saw musician—secrets with which I have taught thousands. Many of my pupils are on the vaudeville stage, playing in dance orchestras, making big money as entertainers. Let me prove that you, too, can quickly play like a professional—amaze your friends and always be in demand at parties and entertainments.

PHONOGRAPH RECORD FREE!

of Saw Solo and Duet

Two beautiful selections, amazing to anyone who has never heard the Musical Saw's sweet tone. Send 10c to cover handling and postage. Or if you do not want the record, ask only for my big FREE Trial Offer with which all my pupils have made their start to fame and money.

Robert S. Alter, broadcasting celebrity, has delighted audiences of six leading stations, including an appearance from WSN "Steamship LEVIATHAN."

"Bud" Gamble is paying his way around the world with the Musical Saw. Is now in Europe.

Charles Guglielmo booked to play saw solos in Broadway (New York) motion picture theatre.

BIG DEMAND—BIG PAY for Mechanical Dentists

Lots of Jobs WE TRAIN YOU QUICK TO FILL THEM

This Stivison trained expert can earn more in one day than some mechanics in other trades make in a week. He got his training by the tool-using, actual doing method taught each student personally by a graduate Dentist. No books—no tiresome lectures. You do work that is actually worn away by patients who come to my clinic for dental work. Only a dentist knows what dentists need. I teach every branch of Laboratory Dentistry. Thousands of dentists do laboratory work because of shortage of mechanical dentists.

Dentists Want My Graduates

The average student is ready to go out and take a job after six months, but you can stay until you are satisfied that you have mastered mechanical dentistry. Anyone interested in a mechanical profession should consider it his first duty to find out what mechanical dentistry offers and why it is such a paying profession. If you would get in the big pay class you should get my latest book, "A Short Cut to Success," which explains the possibilities, my method of teaching and my amazing offers in regard to Real Dentists' Tools and R. R. fare to Kansas City. This book is sent without charge to anyone interested in a mechanical future that offers big pay opportunities. If you have a common school education, good eyes and hands you, can learn Mechanical Dentistry.

How to Get that RAISE in PAY

Scene in radio department. Here you can fit yourself for commercial operator's license if you wish. We teach code as well as theory. Thoroughly practical from start to finish—as in the entire Greer training.

This view shows some of our spare motors, ranging from 1-6 to 35 H.P. These are of all types and makes—for you to disassemble, strip, rewind and experiment with all you wish. They are here for your use and for no other purpose.

View of part of the interior of the bungalow for practicing house wiring—right in the Greer Shops. You learn here by real experience—with an expert always at hand to show you how.

Learning about parallel and series circuits in the Greer Shops. Individual instruction throughout this training. You go ahead as fast as you are able. No one is held back because someone else is slow.

Investigating the mysteries of an automatic telephone. This telephone system is rapidly replacing the old style in many cities. It takes an army of men to install the new mechanism and keep it in repair.

Come on up to Chicago for 12 weeks or less. I'll start you into Big Pay in fascinating Electrical Job.

Now — no more need for long years of flunky work. You can step into a Big Money job quick, this way. Actual experience here—with expert supervisors. No previous experience or higher education needed.

FIT YOURSELF FOR ONE OF THESE POSITIONS

Electrical Contractor	Up to \$25,000 per year
Electrical Estimator	Up to \$15,000 per year
Maintenance Engineer	\$3,000 to \$5,000 per year
House Wireman	\$1.00 to \$2.00 per hour
General Electrical Repairman	\$1.00 to \$1.75 per hour
Motor and Generator Expert	\$1.00 to \$1.50 per hour
Armature and Stator Winder	\$1.00 to \$1.50 per hour
Telephone Expert \$40 to \$75 per week
Trouble Shooter \$40 to \$60 per week
Radio Engineer Unlimited
Sub-Station Engr., Installer or Operator	\$150 to \$250 per month
Boss of your own shop Unlimited

More Electrical Men Needed

Now is the time to start into this fascinating field. The demand for electrical men is growing faster and faster. More and more power companies are extending their operations. More and more railroads are being electrified. Large electric companies now have actually started the tremendous task of electrifying the farms. One of the first in this field was the Milwaukee Power Company, which this year has installed electricity on about 100 farms per month. Think what all these electrical developments mean to you! With this practical training you can quickly become a valuable man—and just at a time when trained men are most needed. Don't wait. Send the coupon below now for full details.

GREER COLLEGE OF ELECTRICAL ENGINEERING
Dept. 1001 2024 S. Wabash Ave., CHICAGO

Free Electrical Book

Send the coupon now for this interesting book. All about electrical opportunities and how to make your start.

FREE

Until further notice, all men taking electrical training in our shops are offered the AUTOMOTIVE COURSE with no added charge. This gives you two wonderful courses for THE PRICE OF ONE. A very valuable combination.

Learn to Boss the Job

Your training in the Greer shops is by actual experience. That is why our men are able to pick off the good jobs so soon after finishing here. That is why they are able to boss the work of less experienced men or to go into business for themselves.

Regarding Our Equipment

On our floors are over 200 motors, of practically every kind, type and make. Complete armature and stator department, with latest equipment for winding, etc. Rotary converters, alternating current generator, high tension line, automatic telephone panel—all right here in our shops for you to use. We have found that men in our shops learn easier, better and quicker, when allowed to take apart and reassemble any equipment they wish. Instead of forbidding this, we now find it wise to encourage it—along with our regular methods of instruction. None of our apparatus is enclosed in glass show cases nor by railings with "hands off" signs. It is real working equipment and serves its purpose only when you learn something valuable from it.

Free Employment Service

Our employment department is ready to help you—while in training and for life. Day and evening classes.

The coupon below will bring you our big illustrated Electrical book free by return mail. Be sure and send the coupon now while you have it in your hands. Don't wait. Do it now.

Chosen Out of 100 Applicants

The Way to Bigger Income

"To LaSalle goes the credit for training me so that I was able to turn a refusal into an acceptance in preference to over one hundred other applicants," writes E. W. DeMotte, a New York man. "I cannot give too much credit to LaSalle and its Placement Department for the success of my application for this very fine position." LaSalle trained him. LaSalle got him the job.

"My investment in LaSalle training," writes J. B. Lewels, "has already paid me, during two months alone, an actual cash profit of 300 per cent."

Send for Salary-Doubling Plan

Such records as those just cited are within the reach of any man who will set his goal toward real success. During only six months' time as many as 1,248 LaSalle members reported definite salary-increases totalling \$1,399,507, an average increase per man of 89 per cent.

If you are in earnest when you say that you want to get ahead, you will not be satisfied until you have put this kind of training to the test—exchanged it, just as thousands have done, for a bigger income.

The details of the LaSalle Problem Method—often spoken of as the *salary-doubling plan*—will be sent you for the asking. Whether you adopt the plan or not, the basic information it will place in your hands, without cost, is of very real and definite value. And it's FREE.

Balance the two minutes that it takes to fill out the coupon against the rewards of a successful career—then clip and mail the coupon NOW.

*If You'll Use This
New Invention*

I'll Guarantee

To Keep You in Razor Blades for Life!

KRISS-KROSS marks such a radical advance in new shaving comfort and economy that it deserves to be classed as much more than a stropper. It's a **super-stropper**—a blade **rejuvenator**! Almost literally it makes a new blade out of an old one every day—makes hundreds of keen, quick shaves blossom where only one grew before.

KRISS-KROSS stops your blade on the diagonal just like a master barber. Pressure decreases automatically. Nickel jig flies up to notify you when your blade is ready with the **keenest cutting-edge steel can take!**

No wonder that this super-stropper prolongs the life of any make blade, single or double edge, for weeks, months and years! No more bother about remembering to buy new blades! No more "raking" with dull ones! KRISS-KROSS solves your blade problem for all time.

Sensational Offer

And now for my smashing offer! To introduce KRISS-KROSS stropper during the next 30 days I am giving with it, **free**, a new kind of razor. This unique razor, with 5 special process blades, completes the outfit with which I guarantee to keep you in razor blades for life!

**Rhodes' KRISS KROSS
STROPPER**

Rhodes Mfg. Co., Inc., 1418 Pendleton Ave., Dept. P-370 St. Louis, Mo.

Most astonishing razor you ever saw. Really 3 razors in one. Adjustable to any shaving position. Flip of finger makes it straight or T-shape in a jiffy. Nothing like it ever on the market before. I'll send you one FREE to introduce KRISS-KROSS super-stropper. Limited offer. Find out about it to-day!

Use the blades and keep renewing them with KRISS-KROSS super-stropper. If one of them goes back on you I'll recondition or replace them with new ones free. No strings. No red tape. I give my amazing guarantee in writing. It is an ironclad agreement to **KEEP YOU IN RAZOR BLADES FOR LIFE!**

Send for Full Details

This astonishing offer is limited. Send for information on amazing KRISS-KROSS inventions to-day. They are never sold in stores—and are even more remarkable than I can tell you here. Clip the coupon to-day! No obligation!

AGENTS: \$30—\$66 A Day!

Make big money with KRISS-KROSS! Free razor boosts sales amazingly. H. King made \$66 one day. C. E. Conklin made \$22 in 2 hours. Others average \$175-\$400 a month. Every man buys on sight. Unique sales plan brings big extra profits. Wonderful free illustrated salesmanship manual, too. Get details at once.

AUTO MECHANICS

Why go on begging for a raise? Why growl and complain because you don't get it? Why, when every city, town and farming community is pleading for more auto and tractor mechanics—trained as McSweeney students are trained, to know cars of every make and to know them "inside out"?

Every month my men are taking fine jobs formerly filled by half-trained students or half-baked, self-trained mechanical tinkers.

I Train You in 8 Weeks

Think of it! Working with real tools on real equipment you become in only EIGHT WEEKS a better auto mechanic than men who have "fiddled" around an ordinary garage for years trying to learn. Let me send you the proof, letters from former McSweeney students now earning up to \$10,000 a year. "Mac's SHOP WAY Means Bigger Pay."

Your Money Back Guaranteed

If, when you have finished your training, you are not perfectly satisfied; if you are not qualified to fill a big pay job, I will re-

fund every cent of your tuition. There is a reason for my making such a convincing offer. Ask yourself why. Then write quick for my remarkable SPECIAL TUITION OFFER. Save one-third now. See what you get:

FREE Your Board for 8 Weeks and Your Railroad Fare

For a limited time only I will pay your railroad fare to Cincinnati or Cleveland and give you your board free for 8 weeks. Send the coupon NOW—before it is too late—for my big illustrated book and full particulars of this amazing offer. Don't delay.

10 Thousand OIL BURNERS At Half Price

Amazing Advertising Offer To Introduce Improved Burner

Now, if you will act promptly you can own a new, improved oil burner at a cost so marvelously low it will astound you. No strings to the offer. No if's or but's. For 10,000 of the new improved Oliver Burners for ranges and heating stoves are going to be placed in representative homes at half price—as part of a gigantic advertising campaign.

NEVER before in oil burner history has such a sensational bargain been offered! And it is made now only because we want people to actually see how many advantages this improved device has over old, crude burners.

FOR EVERY STOVE AND RANGE

There is an Oliver burner model to fit every stove and range. Absolutely safe. Odorless, wickless. Installed in fifteen minutes. No holes to drill. No changes whatever to make. Lasts a lifetime. And complete heating satisfaction is guaranteed.

Now you must act at once to take advantage of this lifetime opportunity. 10,000 stove burners may seem like a great many. But remember, over 275,000 Oliver Burners have already been sold. They will go fast at this sensational price. Get rid of the dirt and drudgery of coal and wood forever. Have clean, quick, odorless oil heat for cooking or heating. Send no money. But get the full details, and register yourself for the opportunity to get a modern Oliver Stove Burner for only a few dollars, by sending in the coupon—right now. Don't miss your chance. **ACT!**

Aviators

Preparatory Institute

INCORPORATED

475 Fifth Avenue - - NEW YORK

WALTER HINTON

YOUNG MEN

PREPARE NOW

The Age of Flight is Here

A great industrial development in air transport has begun in the United States. The good places will go to young men with the necessary knowledge and training. These young men will be the aircraft engineers and executives, the operating officers and pilots who, during the next few years, will contribute to America's Air Supremacy.

You cannot learn to fly by home study, but the first step toward learning to fly or proficiency in any other branch of aeronautics is

A THOROUGH KNOWLEDGE OF PLANES, AIRCRAFT ENGINES, CONSTRUCTION, INSTRUMENTS, AND WHY AN AIRPLANE FLIES.

This knowledge is now available in easily understood form in the Thorough and Comprehensive

Spare Time Study Course

of the

AVIATORS PREPARATORY INSTITUTE

Under Mr. Hinton's Personal Direction

Mail the Coupon for Complete Information and Synopsis of the Course

AVIATORS PREPARATORY INSTITUTE, INC.
475 FIFTH AVE., NEW YORK.

Without obligation, please send me full details of Walter Hinton's aeronautical study course.

Walter Hinton, President of the Institute, former United States Navy Aviator, piloted the famous NC-4 in the first flight across the Atlantic Ocean, in May, 1919. He flew the first plane between New York and Rio de Janeiro in 1922-23. In March, 1924 Mr. Hinton returned to Brazil as a member of the Alexander Hamilton Rice Expedition where he explored and mapped by air thousands of square miles of unknown jungle territory.

STOP USING A TRUSS

Do Away With Steel And Rubber Bands

FREE TRIAL

FREE to 5,000 Truss Sufferers

To the extent of 5,000 sufferers who may apply I will send, ABSOLUTELY FREE, a sufficient quantity of the Plapao to positively convince them that this is the only logical, common-sense way of treating ruptures. Plapao is a highly astringent medication placed within the Plapao-Pad and being absorbed through the skin, creates a wonderful feeling of relief and at the same time tends to strengthen the weakened muscles and thus permanently close the rupture opening. The process of recovery is natural, so you'll have no use for a truss—you can throw it away forever! Old and young have testified under oath that the Plapao-Pads cured their rupture—many of them long-standing, aggravated cases—without delay from work. Patent allowed in U. S. and foreign countries. Awarded Gold Medal at Rome and Grand Prix at Paris.

Send No Money—for a sufficient quantity of the Plapao is sent without charge to enable you to give it a thorough test; you pay nothing for this trial now or ever. Write for it and full information today. Address: Plapao Laboratories, Block 1427 St. Louis, Mo.

"Been on a vacation Bill?"

"No, Jim— I've stopped smoking. Gained six pounds in a week. You know how I used to smoke—a package of cigarettes and a cigar or two a day—it sure had some hold on me. But I'm cured—

took a scientific home tobacco treatment—fixed me up in two weeks.

"Wasn't hard on me at all—noticed improvement the first day—I feel like a new man. It didn't interfere with my work—didn't leave any druggish after-effects—the money I saved in the last two weeks has paid for the treatment alone.

"Why don't you take it! It has cured men like you and me for over forty years—it is a doctor's individual prescription that sure fixes you up. Just send the coupon for full information NOW. No obligation. All correspondence is strictly confidential."

A Doctor's
Prescription

The Keeley Institute, Dwight, Ill.

Please send me, without any obligation on my part, your free booklet which will tell me how to rid myself of the tobacco habit.

Can you fix it

New books have "jiffy index," making all facts instantly available. You find anything you want to know in a moment in this *brand new 1926 edition*.

These books tell how

HERE are the most interesting, the most practical books we have ever published on automobile construction, operation and repairs. Brimful of facts, photographs and explanations so easy to understand that anyone can learn how in almost no time.

Over 2000 pages, with diagrams, blueprints and everything else needed to make anyone an authority on automobiles.

Whether you want to qualify as garage owner, auto repair expert or merely wish to know how to keep your own car 100% efficient, you will welcome these books, especially on our

No Money Offer

This plan brings this valuable information within the reach of everyone. You don't send us a single penny. You don't have to pay us anything—just send your name and address and we'll send you the complete set of 5 volumes, specially bound in Flexo covers.

Read them carefully; keep them 10 days; find out anything you want to know, and then if you want to keep them, send only \$2.00 then and \$3.00 per month until the special low price of \$24.80 is paid. There is no further obligation.

American Technical Society Membership Free

This is a great organization for the publishing and spreading of specialized knowledge—we have over a million dollars of resources, enabling us to get the cooperation of the largest automobile manufacturers and dealers, who have furnished us plans and photographs. If you send NOW for this new edition of Automobile Engineering, we will include a Consultation Membership in this great organization.

EMPLOYMENT SERVICE FREE

In addition to all this, those who send now will be entitled to the service of our EMPLOYMENT DEPARTMENT without charge. We are in daily contact with firms all over the country who need good men and are willing to pay big. This service costs you nothing. Don't miss this special offer. Send now.

Eighteen automobile experts will be ready to help you at all times. You can write or wire any time for special information. Answers will be sent to you promptly—without cost.

Don't Hesitate

There are no strings to this offer—it means just what it says. Send name and address on the coupon and *ALL* of the five books—the complete set—will be sent to you for examination.

Remember one fact only which you can find in these books may save you an expensive repair or help you to a better job.

Learn All About Autos

Get these five big books on this liberal offer and learn all the things you want to know about autos. Carburetors, engines, springs and spring suspension, brakes, 4-wheel drives, lubrication systems—all are fully covered.

These complete and comprehensive auto books are yours if you want them on this easy plan. Send for a set NOW; there's nothing to pay.

Jiffy

Index

You don't have to read the books through; the index enables you to put your finger on the information wanted in a jiffy.

For Free Offer, Use Coupon

American Technical Society,
Spec. Dept. A-719, Chicago, Ill.

I would like to look at the 5 Auto Books described above. Send them on your FREE offer. Discovered!

The Secret of Caruso's Amazing Vocal Power

"The Songbird of the Ages," Enrico Caruso. The richness, the fullness, the beauty and the astounding power of his voice was due to the exceptional development of his Hyo-Glossus muscles.

Eugene Feuchtinger, musician-scientist, who discovered the function of Hyo-Glossus in voice production, and whose famous "Physical-Voice-Culture" system has developed thousands of voices.

Diagram of the Normal Throat showing the Complete Vocal Mechanism. Your throat looks like this. So did the throat of the great Caruso. The Physical-Voice-Culture system of silent, scientific exercises will develop your vocal organ to its full strength.

THIS IS AN AGE OF MARVELS. Wonderful scientific discoveries have changed our mode of living and our mode of thinking.

One discovery of tremendous benefit to all humanity is the discovery of the principle of voice control by Eugene Feuchtinger, A. M.

His resulting system of voice development revolutionizes old methods, and changes voice development from a little understood art to an exact science.

More than that, it brings a Perfect Voice within the reach of every man and every woman who desires a stronger, richer voice for either singing or speaking.

Prof. Feuchtinger's method is founded on the discovery that the Hyo-Glossus muscle controls the voice; that a strong, beautiful voice, with great range, is due to a well developed Hyo-Glossus—while a weak or a rasping voice is due to under-development of this vital vocal muscle. A post-mortem examination of Caruso's throat showed a superb development of Hyo-Glossus muscles. But it required years of training under the old method to produce this development.

You can develop your Hyo-Glossus in a much shorter time by Prof. Feuchtinger's wonderful scientific method. You can take this training under the direction of the Professor himself, wherever you may live. And the cost is so low that it is within the reach of every ambitious man or woman.

100% Improvement in Your Voice—Guaranteed

Professor Feuchtinger's method is far simpler, far more rapid, far more certain in results than the tedious, haphazard methods of ordinary vocal instructors.

Under his direction, your voice will be made rich, full and vibrant. Its overtones will be greatly multiplied. You will add many notes to its range and have them clear, limpid and alluring.

We **ABSOLUTELY GUARANTEE** an improvement of 100 per cent. If you are not absolutely satisfied that your voice is doubled in volume and quality, your money will be refunded. You alone, are to be the judge.

You Do Not Know Your Real Voice

Until you have tried this system, you cannot know the possibilities of your vocal gifts. Physical-Voice-Culture **PRODUCES** as well as **DEVELOPS** the true voice. It corrects all strain and falsetto and makes clear the wonderful fact that any normal person can develop a fine voice if correctly trained. Thousands of delighted graduates

testify to this. Many of them grand opera stars, concert singers, speakers, preachers, actors and educators.

What Are YOUR Mistakes in English?

They may offend others as much as these offend you

Thousands of persons make little mistakes in their everyday English and don't know it. In a five-minute conversation or in an average letter, from five to fifty errors will appear. It is surprising how many people fail in spelling such common words as "business," "abbreviate," etc. It is astonishing how many men say "between you and I" instead of "between you and me," and use "who" for "whom," and mispronounce the simplest words. Few know whether to use one or two "c's" or "m's" or "r's," whether to spell words with "ie" or "ei," and how to punctuate in order to make their meaning absolutely clear.

A REMARKABLE INVENTION

Sherwin Cody, perhaps the country's foremost teacher of practical English, has for the past twenty years applied scientific principles to teaching the correct use of our language. He made tens of thousands of tests and found that the trouble with old methods is that points learned do not stick in the mind. In school you were asked to remember rules, and if you forgot the rules you never could tell what was right and what was wrong. Mr. Cody has solved the problem by creating instinctive habits of using good English through the use of his

SELF-CORRECTING METHOD

A patent was granted to Mr. Cody on his unique device, and now he places it at your disposal. This invention is simple, fascinating, time-saving, and incomparably efficient. You do the lesson given on any page, then you see exactly how Mr. Cody himself would correct it. You mark your errors and check them in the first blank column. Next week you try that page again, correct your errors, and check them in the second column. You see at a glance what you have learned and what you have failed to remember, until you have reached the 100% point in spelling, punctuation, grammar, and expression.

ONLY 15 MINUTES A DAY

A remarkable advantage of Mr. Cody's course is the speed with which these habit-forming practice drills can be carried out. You can write the answers to fifty questions in 15 minutes and correct your work in five minutes more. You waste no time in going over the things you already know. Your efforts are automatically concentrated on the mistakes you are in the habit of making, and, through constantly being shown the right way, you soon acquire the correct habit in place of the incorrect habit. There is no tedious copying. There is no heart-breaking drudgery.

FREE—NEW BOOK ON ENGLISH

A command of polished and effective language denotes education and shows your culture. It wins friends and favorably impresses those with whom you come in contact. In business and in social life correct English gives you added advantages and better opportunities, while poor English handicaps you more than you will ever realize. And now, in only 15 minutes a day—in your own home—you can actually see yourself improve by using the 100% self-correcting method. Write today for our new free book, "How to Speak and Write Masterly English." Merely mail the coupon or a postal card.

Learn How to BOX

JIMMY DeFOREST BOXING COURSE

Teaches by mail the same System he taught Champion JACK DEMPSEY

In 20 weeks, under the System of Jimmy DeForest, World's Greatest Trainer and Maker of Champions, you will master the priceless knowledge that made Jack Dempsey his millions, and fortunes for a host of other Jimmy DeForest-trained ring stars. Every 6 months 30 are selected from all classes and recommended to leading promoters for boxing engagements. That's how pupils are brought to the front at once. Boys who were once rank amateurs are today earning big money; weaklings have been made strong, courageous; men have learned the art of self-defense. Send today for the new famous book, "The Golden Age of Boxing," greatest book of its kind ever written; full of valuable information, photos of great fighters and pupils who became successes over night. Enclose 10c to cover cost of mailing, etc. With now.

ELECTRICITY and How to Make It Pay BIG! FOUR BIG BOOKS TELLING HOW

Your future lies before you. Between the covers of these four big books, filled with money-making facts, you may find the answer to all your problems. You will find them a veritable gold mine of facts on electricity, facts which RAISE MEN'S PAY. No need to spend long hours in grinding study if you know where to find the things you want to know when you need them.

SHORT ROAD TO SUCCESS

There is a shorter road than years of study and experience. Learn in an hour what someone else experimented on for a year. Let him tell you how he did it, look at the drawings others have made and learn from them. It's easy if you have these special volumes arranged for ready reference. These books were published for busy men, men who want to get ahead with the least waste of time. You'll find them a big help no matter what your present job or station in life.

COMPLETE IN EVERY WAY

This is the most complete 4-volume set of Electrical Engineering we have ever published. No such value has ever been offered here. Brimful of interesting and instructive electrical subjects, hundreds of drawings, blue prints and photographs. A marvelous array of pay-building material, but so simply told and so easily understood that anyone will enjoy them. Over 2000 pages bound in flexo covers.

EMPLOYMENT SERVICE FREE

To aid ambitious men to get ahead—to help them get better jobs when needed—we have established a big employment department. We are constantly in touch with large and small employers and frequently know of opportunities you would never hear of. This service is FREE with these books.

SHIPPED FREE

Our plan brings these four splendid volumes within the reach of every one. You don't send us a single penny—you don't make any deposit with us—just send your name and address and we'll send the complete set bound in special "flexo" covers. Read them carefully. Keep them 10 days, then send only \$2.00. After that, \$3.00 per month until the special low price of only \$19.80 is paid. There is nothing else to pay us.

AMERICAN TECHNICAL SOCIETY
 Electrical Division E-713, Chicago, Ill.

You may send me your complete Electrical Engineering library, 4 big volumes bound in flexo covers, with the understanding that I am to have 10 days to decide if I want to keep them. I will either return them then or send you \$2.00 then and \$3.00 per month until the special low price of \$19.80 is paid. Your employment service is to be free if I want it.

Are You Well Bred—But Still an Outsider?

*Then You
Need This
FREE Booklet*

The Development of Culture

"THE proudest gates fly open at the approach of courage and culture," said Emerson. "With culture you can make of yourself what you please," Lord Chesterfield claimed.

How about you? Have you culture? If so, are you employing it to the best advantage? The people who succeed most easily in this world are the cultured people. They make friends easily. They are liked wherever they go. People are always glad to help them.

Many people have culture but few show it. Not because they are afraid to show it but simply because they don't know how. Over and over they continue to do the very things that show lack of refinement. Day after day they continue the little habits—the little mannerisms that lower them in people's eyes. Why do they do these things? Simply because nobody ever told them. Nobody ever corrected them.

Do You Ever Feel Lack of Culture?

Do you ever feel that people are slighting you? Do you ever feel that you are not receiving the attention and respect you deserve?

No doubt you are well bred. But have you ever felt ill at ease in a gathering of cultivated people? Do cultured people take to you as much as you would like? They are polite, of course. And yet you feel a certain formality—a certain coldness in their manner.

Many people are confronted with this problem. Some of them realize the reason

—lack of culture. But very few discover the cure.

Good Manners Are Not Enough

A man or woman may be a master of etiquette and still be uncultured. Perfect etiquette does not insure culture. It is merely an outward indication. In fact, people sometimes concentrate on etiquette in order to hide their *lack of culture*. These people are always found out. There are innumerable little "give aways"—little casual remarks—little unconscious actions which show with startling clearness your culture—or your lack.

Don't Obey Rules of Etiquette Blindly

Uncultured people or people who are only half-cultured oftentimes obey rules of etiquette blindly. They do not discriminate—or interpret these rules. They obey the letter of the law rather than the spirit of it. Thus, unconsciously they make mistakes that a cultured person *could not possibly make*.

It does not matter whether your lack of culture is apparent or real. You can quickly overcome it. You can quickly gain poise—refinement—self-confidence. It is the simplest thing in the world to correct the little mannerisms, the little "give aways" that are holding you back.

Culture teaches you the *spirit* of etiquette. The cultured man knows *instinctively* just what to do and say at all times. He who understands culture—he who knows the principles—the "reason why" of etiquette, is never at a loss in any situation.

Get This New Booklet

We have just published a new booklet—"The Development of Culture." We will gladly send you a copy upon request. The booklet is beautifully printed and filled with interesting illustrations.

If you had to quit work for a month in order to read this booklet, it would probably be one of the most profitable months you ever spent. But you don't have to do that. It takes but an instant to sign the coupon. You get the booklet for nothing.

It tells about the most practical, common sense method of developing culture that was ever devised. It offers you the secrets of poise, refinement and self-improvement, both moral and physical as well as mental.

It shows you how to recognize true culture instantly—how faulty culture leads to failure—how true culture insures success.

It opens the gates of education, refinement, enlightenment and gives you a sure and satisfactory guarantee of social and business success. Send for "The Development of Culture" now. Do not delay.

Hawaiian Guitar

FREE

Worth
\$18

When You Enroll

This Hawaiian Guitar expert and professor wants the opportunity to welcome you as a student so you will quickly learn how to play a Hawaiian Guitar—yes, you will be able to play just like the native Hawaiians. To get you started and help your musical success, which will bring you popularity, you will receive a beautiful Hawaiian Guitar, the same as the one pictured, free when you enroll. Our short cut method of instruction will enable you to play a piece almost from the first lesson. Rush coupon for full particulars today and we will reserve a gift Hawaiian Guitar for you.

Play Quickly

With our short cut method of instruction you will quickly learn how to play Hawaiian Guitar, which will bring you popularity and social success. You learn to play from notes. If you never had any musical training, you will quickly get on, because our nine experts have perfected a course of home instruction which is as simple as learning A, B, C's.

Picture and Phonograph Record Method Easy

We don't depend upon printed lessons only for your success, but we also furnish pictures of our professors playing, diagrams, charts and phonograph records for each lesson. This practically brings our professors from our studio to your own home and enables you to listen to their playing just as if they were actually in front of you. To prove this is easy, we will send you your first lesson free. Rush coupon now.

It takes *only* 8 weeks to get a big job

Geo. Smith owns an agency and repair shop in West Alexandria, Ohio. He makes \$200 a week.

C. E. Gillespie has charge of a fleet of trucks and tractors with the State Highway Commission, due to McSweeney training.

In the Auto, Tractor and Electrical Business

Read what these men are doing—here is your big chance to get "on easy street." Come to these great shops on the biggest SPECIAL offer ever made.

Big firms need trained men. The Auto and Tractor Business is on the boom. Thousands of trained men will be needed during the next few months. I get calls every day from Garages, Battery Stations, Auto Repair, and other successful concerns for McSweeney men. When the big fellows need high grade men they know where to come for them. They want McSweeney trained men.

My training is unusual. Scientific tool training—that's the secret. You do things here according to the latest engineering standards. Thousands of dollars have been spent in modern tools and equipment. You'll know a motor like a brother. That's why my men are at home with the biggest shops in the country. If you want to succeed the way Smith, Collins and the rest have—qualify by the same method.

I'LL PAY YOUR RAILROAD FARE AND BOARD YOU!

In order to fill the openings that now exist, I am making an offer no one has ever made before—FREE RAILROAD FARE, FREE BOARD. But even that is not all. I'll tell you about the rest in my letter.

D. M. Collins, Williams-ville, West Virginia, writes, "After finishing McSweeney training, I started in as manager of a garage at \$300 per month."

Send for FREE BOOK

My big illustrated training book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and my short time offer NOW. It soon expires.

His Salary Was Raised while others were reduced

"Up to the time I enrolled for a course with the International Correspondence Schools, I had only a grade-school education. Since enrolling, I have advanced to a much better position, where my salary is nearly four times as much as I was making previously. I would not be able to hold my present position had I not taken your Course. Recently I received a nice increase in salary, while other men were being reduced."

Read that last sentence again—"Recently I received a nice increase in salary, while other men were being reduced."

There could be no better proof of the value of an I. C. S. course than that. It shows that the trained man is given preference over all others and paid more money, even in slack times, if his work deserves it. It shows that there are always bigger, better jobs open for men who have the foresight to prepare for them in spare time.

Why don't you study and get ready too? We'll be glad to help you if you will only make the start.

Choose the work you like best in the coupon below; then mark and mail it to the I. C. S. today. This doesn't obligate you in the least, but it will bring you information that will start you on a successful career. This is your opportunity.

Big Money for You as an Automobile Mechanic

These four practical books, written by five well known teachers of automobile practice, will teach you right in your own home during your leisure time just what you need to know about automobile troubles and repair. They will teach you automobile construction, maintenance and repair as experts know them and will help you to earn an expert's pay.

Practical Automobile Library: Four Books—\$1.50 in 10 days and \$2 monthly for 6 months—only \$13.50 in all!

Hundreds of question-answering diagrams—hundreds of clearly-marked illustrations—make the books plain and readily understandable. All the explanations and descriptions are clear, simple, direct. Every chapter is packed with definite, step-by-step, how-to-do-it information. Here is your opportunity to enter a big-pay field.

Here's SUCCESS in SELLING for YOU!

If you **KNOW** and **USE** the principles of **SELLING** which are so clearly illustrated in these twelve little books, *you are a successful Salesman.*

If you don't know and use them, you will have to do so before you can hope to be a successful Salesman.

There are **TWO** ways to learn them, however;—you can plug along, maybe for a dozen years or more, until they are pounded into you by experience; or you can read these twelve little books **NOW** and start twelve years ahead of the game!

Endorsed and used in their own sales-promotion work by hundreds of great companies, including:

The Hudson Motor Car Co.
E. C. Atkins & Co.
Congoleum-Nairn, Inc.
Ely & Walker Dry Goods Co.
G. I. Sellers & Sons Co.

Calumet Baking Powder Co.
Phoenix Chair Co.
Ajax Rope Co.
Lennox Oil & Paint Co.
U. S. Slicing Machine Co., etc.

THE COMPLETE SET of twelve books will come to you pre-paid by mail in return for **ONE DOLLAR BILL.**

For 2 Cents BUICK Himself Will Show You How to Earn MORE MONEY

Will you spend a postage stamp to prove that you CAN tear away from small pay? That you can earn just as big money as the man who has everything he wants? Stop working for nothing right now! In an amazing short time you can be master of a real trade—earning real money.

The great Detroit School of Trades—supervised by the Michigan State Board for Vocational Education—has retained D. D. Buick, pioneer of the Valve-in-The-Head Motor and one of the organizers of the Buick Motor Car Company, as chief engineer. Already Mr. Buick has graduated hundreds of men into big pay jobs. Send the coupon to him—he'll show you how you, too, can smash into the big pay class quick—and at amazing low cost.

**STOP
Working
for
Nothing**

D. D. Buick, pioneer automobile manufacturer, once was a tradesman himself, then a great manufacturer. He knows exactly what you need to fit you quick for one of the big money trades. He supervises your training personally.

Mr. Buick knows exactly what you need to fit yourself for the big jobs. Some of the biggest industries in the world cooperate with us.

**This
Beautiful FREE
Book Shows
You How**

Our FREE employment placement department places hundreds of men every year in big pay work.

We have day and night classes—you can work and go to school too. Detroit is a magic city—a mammoth city of industry. What better place could you want to be trained right.

What place can offer you bigger opportunities. Right now you can forget small pay, break free from shackles. Send for this beautifully illustrated FREE book and learn exactly how quick you can be earning big wages—and how easy you can step into a real job. Send the coupon this minute.

**NOW!
Step Into
Steady
WAGES**

CHOOSE!

In This Great School We Teach These Big-Pay Trades

Bricklaying—\$1.50 to \$1.00 per hour
Plastering—\$1.50 per hour
Plumbing—\$1.25 to \$1.75 per hour
Carpentry—\$60.00 to \$125.00 per week
Electrical—\$10.00 to \$15.00 per day
Sign Painting—\$1.00 to \$2.00 per hour
Paper Hanging—\$10.00 and up per day
Interior Decorating—\$10.00 to \$14.00 per day
Plan Reading and Estimating—\$70.00 to as high as \$250.00 a week
Auto Mechanics—\$1.00 to \$2.00 per hour
Auto Painting—\$9.00 to \$12.00 per day
Auto Trimming—\$9.00 to \$14.00 per day
Metal Finishing—\$10.00 per day
Acetylene Welding—\$1.00 to \$2.00 per hour
Tool Making—\$70.00 to \$250.00 per week

The nation sends out a steady cry for more and more skilled tradesmen. But they must be trained—and trained right. Thousands of Detroit School of Trades graduates step at once into big money—or their own business. Joe Hansen was making 65 cents an hour and the very day our experts graduated him our employment dept. put him right out on the job at \$1.65 an hour. Now he's going to be a contractor for himself. Brooks was a low pay bank clerk—He came to this school and in an amazing short time stepped into \$1.25 an hour. Gerald Walet, George Wells, hundreds of others have done it too. And so can you. We train by actual work—NO BOOKS.

In his great college of trades each department is a big school in itself.

Learn a GOOD Trade LOOK ABOUT YOU

Pilot \$500 an hour

*Airplane Mechanic
\$85.00 to \$125.00 a week*

*Batteries
\$300.00 a month*

From ground to sky there's ACTION. Young men mechanically inclined have taken our old civilization and turned it upside down. THE BEST TRADES are mechanical. Over 20,000,000 cars and trucks running. All accessory trades such as welding, vulcanizing, auto painting, developing by leaps and bounds. In the air HUNDREDS of daring men are making fortunes flying. On the field it takes five mechanics to keep one flyer in the air—and what with aircraft manufacture, repair and general ground work, every month opportunities are doubling for the man who knows his trade. If you want to be independent—prosperous—see the world—do the work you like—own your own business, BE A LEADER in our mechanical civilization—HERE'S YOUR CHANCE. MY BIG FREE BOOK IS THE KEY to ten thousand opportunities. Write for it today. It will open your eyes; it will change your whole future.

Sweeney Flying School

Here's the great business of the future. The Sweeney School teaches flying with skilled instructors, fine planes, a great flying field, all equipment. All the time in the air necessary to make you a skilled pilot. If you want to be a pilot, fit yourself for government mail or commercial service, exhibit at fairs, etc., here's your chance.

Easy Now to Learn Expert Flying

At the completely equipped Sweeney airport in North Kansas City—a few minutes from the post office—you are taught in latest model planes, Swallows and others, with dual controls until you are a master aviator. Some learn flying for pleasure; many learn to become mail or commercial pilots—crop dusters—aerial advertising—photo work—taxi service, etc. These jobs pay \$125 to \$225 a week.

Ground School Trains Mechanics

SWEENEY GROUND SCHOOL is a thorough course in practical airplane mechanics. You don't have to take flying unless you want to. Airplane mechanics are in great demand. Five men on the ground needed to keep one man in the air. Learn by doing. Construction and repair of planes—all about motors—re-covering wings, etc. Mechanics and engineers earn from \$50 to \$125 a week. Riggers earn \$50 to \$75. You work on latest type equipment and become a skilled man in a great new business. Mechanics and ground men always assured of interesting, profitable steady work.

-the sky's the Limit!

THE MILLION DOLLAR SWEENEY SCHOOL

with over 65,000 graduates, trains you in a good trade. What appeals to you? Auto repairing—bus line driving—garage—repair shop—tire shop—welding—radio broadcasting—auto painting, or does opportunity call you FROM THE AIR? Do you want to be a pilot—or airplane mechanic? Write me today—GET THE FACTS—about wages—profits—opportunities and HOW THE SWEENEY SYSTEM is equipped to give you successful training.

Garage
Owner \$3000⁰⁰ up

Auto Mechanics Wanted

Auto Mechanics make \$50 to \$100 a week. Learning is easy by the Sweeney System of Practical Training. Use tools not books. Be an auto mechanic—driver—truck driver—repair man—tire man—demonstrator. Own your garage or repair shop. Run a welding and vulcanizing shop. You can learn these trades separately or in a combined course.

Sweeney System "LEARN BY DOING"

If you are mechanically inclined, if you like to work with tools, you will learn under the "SWEENEY SYSTEM" by actually doing the work on the most complete gas engine and electrical equipment. Over \$200,000 invested. \$50,000 Radio Station WHB. You'll get dirty and greasy, but you'll learn through the SWEENEY SYSTEM OF PRACTICAL TRAINING that fits you for the big pay jobs waiting for Sweeney Trained Men.

Send for This Big FREE Book

That's the first step. It obligates you to nothing but gives all the facts. Tells all about different mechanical trades. Shows how men LEARN BY DOING. How we teach with TOOLS—not books. Tells all about wages and opportunities. Fully illustrated; pictures of men at work. Takes you through the million dollar school—one of the sights of Kansas City—on Union Station Plaza—right by the great Liberty Memorial. Men come from all over the world to this school. Read letters from happy graduates, making good. Special section devoted to flying—pictures of planes and hangars and Sweeney Students at work. Clip coupon—or postcard will do—but DON'T PUT IT OFF. This book costs me a dollar but I send it absolutely free. No colored students accepted.

Vulcanizing
\$5⁰⁰ a day

Welding
\$12⁰⁰ a day

Tractor Road Work
\$10⁰⁰ a day

10 DAYS' TRIAL
SEND NO
MONEY

NO
NEED
FOR A
NEW
PHONOGRAPH

New PHONIC Reproducer

makes an up-
to-the-minute
Phonograph out
of your old one! **\$3.85**
Direct
from
Factory

Now at last you can say goodbye to the squeaky, nasal, rasping, metallic tone of your phonograph. Now you can have the beautiful, natural, full-rounded tone of the expensive new machines which are startling the world. Yet you need not buy a new phonograph if you have an old one. The reproducer is the HEART of any phonograph—and the New PHONIC reproducer makes your old phonograph like an entirely new one. Based on the new PHONIC principle. Makes you think the orchestra or artist is in the same room.

Gives the New Tone and Volume of Latest New Phonographs

Tones never before heard are clearly distinguished when the new PHONIC reproducer is used. Test it on an old record. Hear the difference yourself. Listen to the deep low notes and the delicate high notes. Hear how plainly and clearly the voice sounds. Note the natural tone of the violin and the piano, and the absence of "tinny" music. You will be amazed. The new PHONIC reproducer is ideal for dancing or for home entertainments. Its volume is almost double that of the ordinary reproducer.

10 Days' Trial—Send No Money

You cannot realize how wonderful the New PHONIC is until you hear it. That is why we want to send it to you on 10 days' trial. Send no money now—just the coupon. Pay the postman only \$3.85 plus a few pennies postage when the New PHONIC arrives. Then if you are not delighted, send it back within 10 days and your money will be refunded. If sold in stores the price would be at least \$7.50. Our price only \$3.85. Over 350,000 people have dealt with us by mail. You take no risk. Mail the coupon now for 10 days' trial. **BE SURE TO STATE THE NAME OF PHONOGRAPH YOU OWN.**

Do You Make These Tell-Tale Mistakes in English?

Are you always SURE of yourself in conversation—or do you often unconsciously make mistakes that cause others to judge you unfavorably? For example—how would you pronounce “abdomen,” “demonstrate,” “ennui”? Can you discriminate between “emigrant” and “immigrant,” between “disinterested” and “uninterested,” “further” and “farther”? Would you say “Whom shall I call” or “Who shall I call”? Don’t let your English handicap you—learn now the simple secrets of making it well-bred.

THE English you use is the surest index to your education and culture. No matter how particular you may be about your appearance, clothes and grooming—the moment you begin to talk you tell the world *what you are*. And the impression you create depends entirely on *how you say* what you have to say.

If you unknowingly mispronounce words, if you make grammatical errors, if you have to search frantically for the right words to express your idea, you make an unfavorable impression. Your listeners naturally assume that you are lacking in culture and education.

Make This Interesting Test

How would you pronounce “epoch,” “era,” “data”? How would you pronounce “finance,” “advertisement,” “evening,” “column,” “coupon,” “incomparable,” “ascertain,” “appendicitis”? Are you *sure* that you pronounce them correctly?

Do you ever say “effusive” for “effusive,” “affect” for “effect,” “irre-

levant” for “irrelevant”? Do you ever say “can” for “may,” “shall” for “will,” “sure” for “surely”? Should you say “between you and me” or “between you and I”? Should you say “He is apt to do this” or “He is likely to do this”?

A perfect command of your English enables you to express yourself clearly, correctly and well on all occasions. It not only marks you as a man or woman of education and breeding, but it also helps you to win the things you want most in life—a better position, bigger pay, prestige and popularity.

“Well-Bred English”

An Authoritative New Book About Voice, Speech and Conversation

“Well-Bred English” is an extraordinary new book that is not only a pronouncing dictionary, not only a very useful source of information on the choice and use of words, the building of a vocabulary, the construction of sentences, the wording of thought—but also *the only book ever written that gives examples of actual conversations between cultured men and women in ball-*

room, at fashionable dinners and teas, at country clubs, in business. These conversations are given word for word, written phonetically so that they reveal not only valuable secrets of speech and conversation but the pronunciation of familiar words.

“Well-Bred English” tells you what to talk about in different environments—how to be an interesting conversationalist. It tells you how to make your voice rich and vibrant, how to increase your vocabulary, how to choose words, how to pronounce words correctly, how to overcome lisping, stammering, stuttering. It gives the pronunciation and meaning of foreign words in frequent usage, and even tells how to overcome a foreign accent. It is complete, useful—unlike any book of the sort ever attempted.

5 Days’ FREE Examination

Send no money. Just mail the coupon and we will gladly send you without obligation a copy of “Well-Bred English” for 5 days’ FREE examination. After the five days you have the privilege of returning it or sending only \$3 in full payment and keeping the valuable book as your own. Mail the coupon NOW. Nelson Doubleday, Inc., Dept. E-2310, Garden City, New York.

Nelson Doubleday, Inc., Dept. E-2310
Garden City, New York

Send me “Well-Bred English” free for 5 days’ examination. Within that time I agree to return it without obligation if I am not delighted, or keep it and send only \$3 in full payment. I am to be sole judge.

OUTDOOR SPORTS THE YEAR 'ROUND

Popular Mechanics New Useful Book—Outdoor sports appeal to us all. But the fun is double when you make your own devices. There are 226 clearly written and concise articles telling how to make equipment for new and popular sports of many kinds in the new Outdoor Sports book. There are clever devices for such sports as:

Swimming	Trapping	Photography	Kite flying
Camping	Tobogganing	Tennis	Summer games
Football	Baseball	Outdoor winter games	Nutting
Swinging	Fishing	Skating	Pushmobiling
Trolley coasting	Golf	Boating	Racing
Roller skating	Boat sailing	Toy making	Skating

It is easy to make the devices described because there are 317 helpful illustrations. The articles are clear enough for boys, yet interesting enough for any man.

Send No Money Just write your name and address on a postal card and say that you want Outdoor Sports the Year 'Round. When the postman hands you the book, give him \$1.50 plus the few cents postage, that is all. If you live outside the U. S. or if you are not at home when the postman delivers the mail, then send \$1.50 with your order. Address your postal to

POPULAR MECHANICS PRESS Room 710, Popular Mechanics Bldg. 200 E. Ontario St., Chicago

Build a Boat Popular Mechanics Boat Book tells how to make 21 kinds of boats and canoes. Fully illustrated. You can build a boat any time of the year. Many do the building in winter. Price 50 cents. **POPULAR MECHANICS PRESS**, Popular Mechanics Bldg., Rm. 710, Chicago, Ill.

**We have
Auto JOBS
WAITING
here for you now!**

Our Free Employment Service has hundreds of jobs for National students. You can work at part time jobs to earn board and room while training. When you graduate we help you get the job you want—in a garage—a service station—or help you start in business for yourself. Even years after you leave, this free service will help find jobs for you. This 21-year old school has 16,000 graduates, many of them heads of big businesses. They want other National-trained men to help them. The leading auto manufacturers and associations endorse National training methods and give preference to National students.

Special Reduced Tuition NOW!

To get good men quick I am cutting the price of my training 30%. This offer can't last. Ambitious men will mail this coupon right now and in a few months they will be on the way to become high-paid Auto Experts holding good, steady jobs. Sign below for bigger pay!

This Remarkable New... **AUTO BOOK FREE**

free
to men
west of the
Mississippi

\$1.00
to
Easterners

this book

**is only for men who can
Come to California
to Learn Autos!**

I need men right now to learn the auto business and go right to work. The best service shops in Los Angeles are paying National-trained men \$60 to \$100 a week. They need more thoroughly trained auto repair men—quick!—so I can make you a special offer if you can come to California NOW!

I'll Help You Make More Money—Quick!

It costs me a dollar to send you my 84-page book that tells you the **Truth** about your opportunity to make money in Autos. It gives plain facts—shows just how 16,000 other men have succeeded through my training—and proves that I have the equipment, the instructors and the location to fit you to become a real Auto Expert. I don't rush you through half-trained. I guarantee to employers that my graduates know their stuff. That's why National graduates make good everywhere. It pays to come to Los Angeles and get **quality** training. I have no "free offers"—no free railroad fare—but I do guarantee to give you the most thorough, practical training. And my catalog proves it! Before you pay any money for automotive training—read my book and judge for yourself where you'll get the best, most thorough training.

NOW! Are you ready for My Special Offer?

If you live west of the Mississippi River and are ready to go to work right away—I'll send you my \$1.00 catalog **absolutely free**. It explains everything. If you live in the East, send me \$1.00 and I'll mail you the catalog. Then, when you enroll, I'll credit you with a dollar, so you won't be out any money.

Learn to Write For Newspapers *This New, Easy Way*

**New "Copy Desk" Method Enables
You to Prepare Quickly for Success
—Right at Home—In Spare Time!**

IF you have ever dreamed of a career as a writer, here is your opportunity to prepare for success in a fascinating, money-making profession, and at the same time acquire a broad background of knowledge and experience that may lead to distinction, even fame, in the field of literature.

As a newspaper writer, you have the opportunity to see more of life—its adventures, romance and mystery—than would be possible in almost any other vocation. Probably no other line of endeavor affords the opportunity of seeing so much of life.

Well Paid and Full of Opportunities

Salaries for newspaper writers, both men and women, compare most favorably with those in other important professions. Furthermore, those who develop real ability stand out so prominently in the spot light of publicity, that they are singled out for big money offers, not only from competitive publishers but from important corporations in other lines of business.

A Remarkable Method of Training

Our remarkable course of instruction—called the Copy Desk Method—is especially arranged for home instruction, and is conducted by practical newspaper men—men who know from personal experience the things they teach you to do.

Through this Copy Desk Method which actually reproduces the conditions under which the staff writers of big newspapers work, you receive a thorough, practical, training in every branch of this fascinating subject. You learn newspaper writing as it is actually done in the big newspaper offices. Your training is carried on exactly as though you were at the copy desk of a New York Newspaper.

Every phase of newspaper work, every kind of writing, is covered so thoroughly that you will be amazed at how rapidly you progress. Yet the price of the course is very moderate.

Illustrated Booklet—FREE!

Our FREE 32-Page Booklet, "Writing for Profit," describes the course in detail. The coupon below will bring your copy to you, without any obligation whatever. If you are ambitious for a career as a writer, fill in and mail the coupon now! Newspaper Institute of America, Dept. 710, 25 West 45th St., New York City.

**Newspaper Institute of America,
Dept. 710—25 West 45th Street, New York City**

Own a Typewriter!

A Bargain You Can't Ignore!
Try It Free, and See!

GET YOUR typewriter now. A genuine Shipman-Ward rebuilt Underwood is the one you want—"the machine you will eventually buy!" Everyone needs it; now anyone can afford it. Don't send a cent—but do get our big special offer—our valuable book on typewriters and typewriting—free. You can learn to write on this standard-keyboard machine in one day. A week after the expressman has brought it, you'd feel *lost* without it. A trial will prove it—and doesn't cost you a penny!

A New Plan

Our rebuilt plan gives you the *best* machine and saves you a *lot* of money.

The Underwood is so famous a make, and No. 5 so popular a model, you'll have to speak up if you want one of the lot we are just completing now!

We rebuild from top to bottom; replace *every single worn part*; each machine is in *sparkling* condition. New typewriters are commonly guaranteed for a year; we guarantee these completely rebuilt Underwoods *five years*. That's our Better-Than-New Guarantee! And we guarantee a big saving in money!

We don't ask for a cent now. Nor any money at all, unless you are completely won by the wonderful writing machine we ship you for an unrestricted 10-day free trial. When you do buy, take advantage of our very liberal scale of monthly payments. A host of our patrons have paid for their typewriters out of money made typing for others. (One woman made a *thousand dollars* at home last year with her Underwood.)

Free Trial Offer

If you know typewriters, you know the perfect work and the ease and speed of an Underwood. If you have never owned a typewriter, start with the finest! You can try this one at our risk. But, the time to act is **NOW**. Don't miss out on this present bargain offer. Don't

Tobacco Is Hurting You

Look at the facts square in the face, Mr. Tobacco User. You may think tobacco is not hurting you.

That is because you haven't as yet, perhaps, felt the effects of the nicotine poison in YOUR system. For you know that nicotine, as absorbed into the system through smoking and chewing tobacco, is a slow working poison. Slow, yes—but sure.

Tobacco is lowering your efficiency. It slows a man down. Makes it harder for you to concentrate your mind on your work. You haven't near the amount of "pep" and energy you would have if you stopped using it. There's many a man twice as old as you in years who's twice as young in energy, simply because he lets tobacco alone.

Some day you will realize to what an alarming extent tobacco has undermined your system.

When your hands begin to tremble—
and your appetite begins to fail—
and your heart seems to "skip a beat" now and then—
and slight exertion makes you short of breath—
then you have a right to suspect that
TOBACCO is getting the upper hand.

Any well-informed doctor will tell you that these are only a few of many symptoms of tobacco poisoning.

And YOU know that the use of tobacco in any form is an expensive, utterly useless habit. You know you ought to quit.

Tobacco Habit Banished Let Us Help You

It doesn't make a particle of difference whether you've been a user of tobacco for a single month or 50 years, or how much you use, or in what form you use it—whether you smoke cigars, cigarettes, pipe, chew plug or fine cut or use snuff—**Tobacco Redeemer** will positively remove all craving for tobacco in any form in a very few days. Not the slightest shock to the nervous system. Your tobacco craving will usually begin to decrease after the very first dose—there's no long waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is marvelously quick, scientific and thoroughly reliable.

It is in no sense a substitute for tobacco. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It helps to quiet the nerves and make you feel better in every way.

Results Guaranteed

A single trial will convince you. Our legal-binding, money-back guarantee goes with each full treatment. We will refund every cent you pay for the treatment if after taking it according to the easy-to-follow directions, it should fail to banish the tobacco habit completely.

SEND Coupon for Free Proof

Let us send you our free booklet on the deadly effects of tobacco, together with testimonial letters from men all over the country telling how they have been absolutely freed from the tobacco habit by this simple home treatment. You could not ask for stronger proof that **Tobacco Redeemer** will free you from the habit than the evidence we will gladly send on request. Just mail the coupon—or a postal will do.

Sensational Sample Offer

Amazing Tire Fluid Seals Punctures!

Startling Discovery Makes Old and New Tires Puncture Proof. Increases Mileage Tremendously. Seals Slow Leaks, Valve Leaks and Porous Tubes. Prevents Rim Cuts and Broken Side Walls. Read Inventor's Free Trial Offer Below!

HERE is a wonderful new scientific discovery called Aer-Pruf, which seals punctures instantly while you are driving. You never even know you have a puncture. It doubles tire mileage because it prevents driving with partly flat tires—the biggest cause of tire trouble.

No injurious effects on casing or tubes. Will last the life-time of the tube. Applied in a minute. Aer-Pruf does away entirely with changing tires and patching tubes on hot, dusty roads—in blazing sun or in freezing snow storms.

Tests on this boon to autoists have been astounding! Steve H. Temple drove a tire that had been punctured 50 times over 3,000 miles and it did not leak a pound of air! An old tire, after being treated with Aer-Pruf, was punctured with 857 nails without a single leak. Another tire was punctured 1,100 times!

Sensational Money Maker

So startling is this invention, so marvelously successful that our representatives are piling up big profits for just a few hours' work. Every auto owner, whether he drives a Ford or a Cadillac, is eager to buy—he detests the fuss and bother of changing tires on the road and mending tubes. Absolutely no sales talk is necessary—a deaf and dumb man can sell Aer-Pruf. If you have a car you can equip one of the wheels with an old tube to use for demonstration. But you don't need a car—an old discarded casing and rim will be sufficient to bring in \$15 to \$25 every day.

Sample Offer Free

Right now we are making a big, special offer to send you sample sets of Aer-Pruf at the inventor's risk. And also, we agree to actually pay you for testing Aer-Pruf if you are not amazed and delighted with it. Send the coupon for full details—and generous money-making proposition. Mail it today.

AER-PRUF MFG. CO.

P-2212 Logan Bldg., Mitchell, S. Dakota

\$75 to \$150 a Week to Agents!

Aer-Pruf is the most remarkable selling proposition ever seen. And the biggest quick-money discovery of all time! Read what these full-time and spare-time demonstrators say:

\$57 One Evening!

"Demonstrating on Main Street Saturday evening have made as high as \$57 for one evening's work."—FRANK RYMAN.

\$9 in 5 Minutes!

"Aer-Pruf is everything you claim. On first demonstration I made \$9 in about 5 minutes—with plenty of prospects left to call on."—HENRY DUBOIS.

You Can Do As Well!

AER-PRUF MFG. CO.

P-2212 Logan Bldg., Mitchell, S. Dak.

Please send me full details of your Free Sample Offer and your offer to pay me for my time in testing these samples if I am not amazed and delighted with them.

Don't miss it

This Tenor Banjo

FREE

When You
Enroll

This handsome full size, professional tenor banjo is yours when you enroll. We want to make one thousand new friends this month. We want to present one of these wonderful, delightful instruments as a gift to each of one thousand readers of this magazine—and here's why. Before becoming a professor, and a lover of music, particularly the tenor banjo, Prof. Six yearned and yearned for the possession of a genuine, professional instrument, the same kind used by the big, successful professionals of the world. Now we want you to succeed. We want to help every music-lover that we can, attain success, and this gift offer is made to pave the way for you, and no previous musical knowledge is necessary.

We have another surprise for you! Not only do we start you on the way to popularity, success and fame by supplying you with an instrument that you can compare to any used or displayed in your town, but under personal supervision you will be given, by mail, the benefit of Professor Harry S. Six's twenty-two years' experience as director of Glee and Instrumental clubs of New York University. We don't just send you a lot of printed words and instructions and trust to luck that you will catch on. Our method is different and has proven to be the simplest devised by man—that is why we claim you'll be able to play in thirty minutes. Put us to the test.

Learn in 30 Minutes

With My Picture Method

Arthur Brisbane, the highest paid journalist in the world, once said that "a single picture is worth a thousand words." He was right, for it stands to reason, when you take your instrument in hand along with the actual photographs of our professor in action as your guide, it is easy to imitate and do the right thing. But that is not all.

We also furnish as an additional guide, phonographic records of our professor playing the piece you are learning, along with our thorough, printed and illustrated, easy-to-read course.

Doesn't that sound easy? It is easy. If you could sit at our desk and see the letters and telegrams from our pupils you would be convinced that we have perfected the simplest, yet most highly efficient course to insure your mastery of the tenor banjo.

Don't Send a Single Cent

Investigate offer today. Don't put off until tomorrow, because you might forget and miss this wonderful opportunity. It might be the turning point in your career. Don't send a single cent. Just drop a line—use coupon or postal card will do—telling you are interested in receiving full particulars about course and to reserve one regular eighteen dollar, full size professional tenor banjo for you, which is offered as a gift. Act quickly, because there may not be enough gift banjos to go around for the million or more readers of Popular Mechanics. This does not obligate you in any way. Therefore, do not hesitate—put in your reservation now, this very minute. You will soon join our happy army of enthusiastic finished tenor banjo musicians.

EARN BIG MONEY

Hundreds have started orchestras and are making money.

FREE BANJO COUPON

Join The Gasoline War!

Cut Your Gasoline Cost to 9¢ Per Gallon

\$51
an Hour

The Stransky Vaporizer is one of the biggest sales propositions of the century—you can make big money quick. But don't take our word for it. Read what these men say. J.W. Cronk made \$51 in one hour. He says: "The results of one hour's work—17 men gave me orders for the vaporizers."

\$120 in One Day!

I have found out that the Stransky will do what you said it would. I took forty orders in one day and won't out long. My Ford runs better than it ever did. I can save half the gas and it pulls better.—J. M. James.

\$48 in 3 Hours

My gas bill has been cut nearly in half. I have removed every particle of carbon from my engine. Since I installed it my engine runs as good as new, starts easier and quicker. I went out Saturday about three hours and secured 16 orders.—J. A. Williams.

ONE MILLION Satisfied Users

Ford Runs 60 Miles on a Gallon

I made approximately 60 miles on a gallon of gas in a Ford sedan, and I made 15 miles on one quart of gas.—O. C. Zeigler, Pa.

32 Miles with Buick

Vaporizers installed on both Buick and Ford are doing wonderful work; getting 32 miles on Buick and 61 miles with Ford.—Harvey C. Hipple.

Say good-bye to the high cost of gasoline! For now an amazing new invention—a ridiculously simple little device—makes practically any car give twice its regular mileage to the gallon! Already it is being used by over a million satisfied car owners—on all makes and models of cars. And now the inventor will send you a sample at his own risk! Read his offer below.

\$250 to \$500 a Month

WITH this wonderful new invention, auto owners in all parts of the country have chalked up records of from 37 to 57 miles and even up to 61 miles on a gallon of gasoline.

And now this amazing new invention is making big money for agents and distributors. Now you, too, can make good money—just telling your friends about it. You can easily earn astonishingly big profits in full or spare time—many are earning \$250 to \$500 a month.

Fits Any Make or Model Car

Here's how this wonderful little device works—how it adds more power and mileage to any make or model car. Every carburetor is adjusted to make starting easy—it gives a rich mixture to start a cold engine. But once the engine gets heated up the mixture is far too rich, resulting in faulty explosion.

Half the gasoline is drawn into the cylinders in a raw state and instead of exploding, it burns. This causes a heavy deposit of carbon.

But with this startling little device in a car all this is changed. As soon as the engine warms up, this device automatically begins to admit a much larger volume of air, thoroughly vaporizing all the gasoline, giving it fully 50% more power—breaking it up so that it explodes instead of burning.

Introductory Sample Offer

To introduce this new invention Mr. Stransky, the inventor, will send a sample at his own risk. Not only that, but he will actually pay you for testing his Vaporizer if you are not delighted with it. Write at once for his proposition.

The demand for the Stransky Vaporizer is enormous. Agents handling this device are simply coining money. Splendid for spare time work.

Be the man to cash in big in your community.

MAIL THIS COUPON TODAY

Everyone Can Write Shorthand This New Way

Used by

Executives
Sales-
managers
Salesmen
Reporters
Engineers
Physicians
Writers
Clergymen
Teachers
Students
Stenogra-
phers
Clerks

At last—a really scientific way to write shorthand! No drudgery! No tedious memory work! No unfamiliar signs and symbols! Just your ABCs, written with pencil or on the typewriter. After your first hour's study you can begin to use this system. The most accurate and rapid shorthand ever known.

Only 3 Weeks Required to Complete the Course

Contrast this short time (three to eight weeks) with the months of study and years of practice necessary to attain proficiency in the use of any other system. (Government statistics show that 88% of those who study other systems fail to make use of them!)

Amazing Speed Quickly Developed

No one ever fails to master this new, easy method. Students and graduates make speed records never attained before. Notes made by one person can be transcribed by another.

Speedwriting

The NATURAL SHORTHAND

—was originated by Miss Emma B. Dearborn, a nationally recognized authority, who for eighteen years trained teachers, students and speed contestants, in practically every kind of conventional shorthand, in such notable educational institutions as Columbia University, University of California, Rochester Business Institute and Simmons College, Boston. Throughout the United States and in foreign lands Speedwriting has been welcomed enthusiastically by business and the public. It is used in the U. S. Army and Navy. Everywhere this new, natural shorthand is hailed as the perfect system that will eventually supplant all others.

Mail Coupon for FREE Book

Let this inspiring, illustrated book tell you what Speedwriting is like, how it will save your time, money and strength and make you more valuable in your work, whether you are an executive, professional or business man or woman, experienced stenographer or beginner.

Brain Tools

For Architects, Draftsmen, Carpenters, Contractors, Builders and all who expect to build

Men who work with their hands know that headwork gets them more money.

Brain tools make the tools in your tool box at least twice as effective, and the best brain tools you can get are good books—not just any books, but books which tell you the things you want to know, and do it instantly. Carpenters make themselves contractors by learning how to estimate correctly. Contractors are able to handle bigger and more profitable jobs by learning how the big fellows do it, and architects and those who want to enter this highly paid profession earn more money by having facts and figures at their finger tips.

This brand new set of five handsomely bound books covering all phases of architecture, carpentry and building, enables you to get authoritative, specialized information in a moment. No tedious long hours of reading—no hard grinding study, but instant reference to the vital facts. You don't waste a minute—the new jiffy index puts before your eyes, without wasted time, the things you want to know.

The most complete work of its kind we have ever published; nothing has been overlooked. Use of tools—building construction, heating, lighting, plumbing, architectural drawing, blueprint reading; in short, the most comprehensive and easily understood work of its kind.

These Books Sent FREE

Yes, this is true. We ship them to you without a penny of down payment. When you get them, look them over carefully—note how easy it is to find what you want to know—turn the index in any way you want to and then, if after 10 days you agree that you have at hand a veritable mine of invaluable information, send only \$2.00 and keep the books. After that send us only \$3.00 per month until the small total of only \$24.80 is paid. For a short time we will include with each set a complete portfolio of the five basic orders of Architecture. These 58 beautifully illustrated plates are drawn to scale and carefully figured. Size of each 11x15 inches. You'll thank the day you sent for your set.

Learning Means Earning

and here you have at hand information gathered from hundreds of experts, all for so small a sum you'll never miss the money. Use these books as others have done and you'll get many times their price in a few months. One job alone may repay you several fold. Send for your set today.

FREE EXAMINATION COUPON

AMERICAN TECHNICAL SOCIETY
Dept. G-719, Chicago, Ill.
You may send me, entirely without obligation, this handsome set of 5 volumes—Architecture, Carpentry and Building. I am to have full ten days in which to look them over and decide if I want to keep them. After which I will either send them back or send \$2.00 down and \$3.00 per month until the special price of only \$24.80 has been paid. Please include FREE the portfolio of 58 handsome plates.

*"They last twice as long as
the smaller batteries
of equal voltage"*

"THAT's a pretty broad statement, Tom. Won't you have to make it conditional on the number of tubes in the set or the use of the new power tubes?"

"No, sir! Under the same operating conditions—whether you use four, five tubes or more, whether you use a power tube that uses up to 135 volts, the Eveready Heavy-Duty No. 770 or the even longer-lived Eveready Layerbilt No. 486 will last twice as long as the smaller sized 45-volt batteries."

"Well, they ought to, they cost more."

"Yes, about a third more—but lasting twice as long as the smaller batteries, they cost much less."

"Your arithmetic is good, Tom, but if that's so, when I bought my set why did the dealer equip it with the smaller Eveready 772? Why didn't he put in the Eveready Heavy-Duty Batteries?"

"He probably thought he was doing you a favor—making your first investment cost you a little less. That little difference looks like a lot to a good many folks who are buying their first set, equipped with tubes, loud speaker, 'A' and 'B' batteries and everything."

Heavy-Duty batteries last twice as long as the smaller

batteries of equal voltage. Eveready Heavy-Duty Batteries are the great contribution that the world's foremost electro-chemical laboratory has made in "B" battery economy, dependability and satisfaction, and the satisfactory reception of radio programs.

Dry "B" batteries give a noiseless current, pure D. C. (direct current), the kind that is essential if you prize pure tone.

Send for booklet, "Choosing and Using the Right Radio Batteries," which we will be glad to send you upon request. This booklet also tells about the proper battery equipment for use with the new power tubes. There's an Eveready dealer nearby.

NOTE: A "C" battery gives a quality of reception unobtainable without it and greatly increases the life of your "B" batteries.

OCTOBER, 1926

No. 4

By ANDREW R. BOONE *931 7th Ave. Los Angeles, Calif.*

"THE Marines have landed and have the elephants well in hand."

In these words might that famous message from the United States marines be paraphrased, and no levity intended. Uncle Sam's soldiers of the sea recently boarded the U.S.S. "Eagle No. 34" at San Diego, Calif., proceeded 240 miles south and west to Guadalupe island, 135 miles off shore from Lower California, and brought back three members of the only known herd of northern elephant seals.

They braved the perils of a Pacific storm and a rocky landing on the wind-swept island. A quarter of a mile from shore, where the little navy craft remained, the ocean was 10,000 feet deep, and thus anchorage was practically impossible. Crates in which the sea elephants were transported upset; their man-powered

whaling boat that they rowed from ship to island and back again, capsized; they worked in chilling water for hours and defended themselves against the sharp teeth of 6,000-pound seals—and returned with the last trophies the Mexican government will ever permit to be taken from the shores of Guadalupe.

As the first step in capturing sea elephants for the San Diego Zoological society, the marines made fast to the motor dory three crates, made of heavy wire screening and wood. After a battle with the waves, the crates were landed and then came the task of inducing the animals to enter captivity.

Lieut. E. W. Dort, U. S. N. reserve, in charge of the expedition, had the men spread out wire wings toward the elephant which was driven into the cage

After much prodding. The same procedure was followed with two others. Then, by man power, the crew dragged each crate to the edge of the water. At that point barrels were lashed to each side to float the captives to the boat where they were slung aboard easily by means of a crane.

Difficulties greater than any physical dangers of catching and transporting the sea elephants were found in their feeding, members of the party reported. The seals eat live fish only, when in their wild state, and when, on a previous expedition, one was being taken from Guadelupe to the United States, it soon died because keepers did not know how to feed it.

Zoologists had attempted to learn, by examining the stomachs of those found dead on the beach, what they ate, but nothing other than black, volcanic sand was ever discovered. Apparently they frequently fasted for considerable periods. Lieut. Dort, by virtue of a former experience of the kind, was prepared to force-feed these three prizes, and soon after they were deposited aboard "No. 34," all were eating and looking for more dead fish. At San Diego the animals were hoisted again and again let down, this time on a motor truck, which bore them safely to an artificial pool of salt water where they will spend the rest of their lives.

Guadelupe island, named for the patron

saint of Mexico, is of volcanic origin and lies far away from the lanes of travel. The first inroads there took place in the late eighteenth century when fur seals were discovered. Until 1830 they were subjected to annual raids by sealers who built stone houses on the island and completely depleted the fur-seal herds.

Next came whalers, presumably only to fill their waterbags.

After the whalers came hunters of elephant seals. During the early days of California, the demand for whale oil for lighting purposes soon exceeded the supply. Whales became scarcer and were found only in more distant regions. It was about this time that some ingenious follower of the sea found that the blubber of the elephant seal contained a large quantity of oil.

The natural sluggishness of these animals, sunning themselves on the beach, made them easy prey for the killers, and they were slaughtered by the thousands, to become victims of the try pot. As a result, the herd at Guadelupe is the only one remaining today.

The elephant seal is a true seal, differing from the more commonly known varieties by its great size and by the presence on the adult males of a short trunk, from which they derive their name. Unfortunately, little is known of their habits.

Trying to Isolate a Prize Specimen from the Herd; Using Barriers of Wood and Wire to Surround Elephant Seal and Direct It toward the Cage

Folding Monoplane with One Side of Wing Laid Back against the Fuselage

MONOPLANE THAT FOLDS UP FITS INSIDE GARAGE

Successful test flights with a folding monoplane are reported from Roosevelt field, Long Island. The wing can be bent back flat against each side, reducing the width from forty-four feet to twelve and one-half so that the plane can be housed in an ordinary garage. An additional feature is an air brake on the wing, which makes it possible to reduce the speed considerably in landing and thus to stop the plane in a shorter distance.

TRAFFIC JAMS COST NEW YORK MILLION DOLLARS DAILY

In New York city, loss by traffic congestion costs its citizens \$1,000,000 a day, according to estimates, and \$600,000 every twenty-four hours in Chicago. The problem has a direct relation to the high cost of living, for the expense of delivering products affects the price to the consumer. In one center, it is said to cost as much to distribute potatoes from the freight station among the buyers as it does to haul them 1,000 miles by rail. Six cents a minute is the approximate expense of keeping a motor truck of average size on the streets, whether running or not, according to careful figuring. A small car will consume one gallon of gasoline in forty minutes of idling. A large taxicab company states that it would save \$100,000 a year in gasoline if it could save only two minutes on each trip. Public-transport

concerns must provide a large number of units to offset delays caused by traffic congestion. Lack of parking space is an additional costly result of clogged streets to the other inconveniences and expenses which must be borne by the ultimate consumer. It is evident, therefore, that the traffic problem affects all citizens.

ELECTRIC FAN FOR CLOSED CARS 201 RUNS ON SIX VOLTS

Among recent accessories for the comfort of the autoist, is a six-volt electric fan that may be attached to the interior of the car. It affords healthful ventilation and a cooling current when the auto is stopped in congested streets on warm days.

**BALANCE OF HEAT
AND HUMIDITY
FOR COMFORT**

Tests at the bureau of mines in Pittsburgh, Pa., have established what experts declare to be the proper balance of heat and humidity favorable to the greatest human comfort. In perfectly

still, saturated air, a temperature of sixty-four degrees is the most satisfactory to the average person of European race, the measurements indicated. Two degrees more are necessary for complete comfort if the air is only eighty-per-cent saturated, and if the moisture is reduced to fifty per cent, sixty-nine and one-half degrees are needed. Such conditions were held comparable to those of an ideal day in May or June. With a relative humidity of twenty per cent, the comfort line lies slightly over seventy-two degrees. The "still" tests represented only half of the problem, for when the air is moving, a higher temperature is necessary since the skin is cooled by air movements. The experiments showed that a temperature of seventy-six degrees with a relative humidity of forty-five per cent, when the air was drifting 340 feet a minute, was just as comfortable as a temperature of seventy degrees in perfectly still air of the same degree of humidity. At eighty degrees and a relative humidity of fifty per cent, the air had to be circulated several times as fast as in the preceding test, to give equal comfort. The amount of clothing and the activity of the person, change these "comfort levels."

**ELECTRIC REVOLVING TABLE
HELPS GATHER REPORTS**

An electrically driven revolving table is being used in the ~~department of agriculture~~ at Washington to facilitate the collection of separate sheets of reports into complete

Revolving Table Used in Government Department to Enable Old Employees to Do Work of Gathering Pages of Reports While Seated

groups. Formerly the stacks of sheets, as they came from the printers, were laid out in rows on long tables and the workers walked down the row, taking a sheet from each pile. The process involved much loss of time and required strong employees to stand the continuous walking. The

Capt. Bleasdale and Machine Gunner Demonstrating Accurate Fire; Holding Target, the Captain Advances toward the Gun While Bullets Whiz Close By; Inset, Supporting a Dummy Figure in Accuracy Test

revolving table now in use brings the sheets to the workers, and enables the employment of aged and crippled government servants, who otherwise would have to be pensioned. At the end of the revolution a complete copy is gathered.

BIG STEAMER WITH NINE DECKS LAUNCHED IN FRANCE 182.

One of the largest vessels afloat is the "Ile de France," a 40,000-ton ship with nine decks. The hull has the approximate height of a twelve-story building. The steamer is considered an innovation in French maritime enterprises as, heretofore, emphasis has been on elegance and comfort rather than size.

MARINE FLIRTS WITH DEATH TESTING MACHINE GUNS 110.

Walking down a ten-inch lane between machine guns spitting lead, Capt. Victor Bleasdale, of the Marine corps, seemingly invites certain death in his daily work at Quantico, Va. He does it to show that the bullets do not vary in direction after discharge, and to convince recruits that they could walk safely close to a protecting machine gun barrage in making attacks on an enemy. The secret of the test is to walk straight. In another demonstration, he holds a man-size target while bullets shoot over the head of the dummy, showing that fire directed close above advancing soldiers would not harm them.

PATRON WATCHES HIS HAIRCUT IN DOUBLE BARBER MIRROR

Double Mirror in Use; It Affords Both Front and Rear View, and Is Easily Turned Out of Way

Raised or lowered by a pulley, a special mirror arrangement over the barber chair affords the customer a view of the entire haircutting process. The glasses are quickly swung out of the way and do not interfere with the barber's movements.

PORTABLE BOAT FOR BATHING FOLDS INTO SMALL BAG

A sailboat that can be folded into a small case for carrying is one of the latest accessories for the bathing beach. It is brilliantly colored, weighs but twenty-five pounds and contains balsa wood, the light tropical product more buoyant than cork. It is said that the craft is constructed to serve as a life preserver for four persons, should such use be necessary. Besides the sail, which can be erected in three minutes, a wooden paddle is furnished. The boat folds up on brass hinges and is

Swimmer with Boat and Craft in Bag

only three feet in length when closed, so that it can be carried in a car without projecting.

BRACELET OF COCONUT SHELL LATEST FAD IN EUROPE

Coconut-shell bracelets, studded with precious stones and ornamented with gold or platinum, have become popular in European fashion centers. Those from the South Sea islands are considered the best as they are less likely to break. To make the bracelets, the nuts are gathered about a month later than usual, the inside is scooped out and the shells buried in clay soil for six months to improve the grain. From fifteen to twenty bracelets of different sizes can be cut from some of the larger nuts. They are finished in various patterns, and the more elaborate ones are priced at several thousand dollars, depending largely upon the value of the stones with which they are decorated.

NEW WAY OF FREEZING FISH PRESERVES THEIR FLAVOR

By immersing fish in brine baths then freezing them quickly at low temperature, chemists are reported to have discovered a way of preserving them without any loss of flavor. Laboratory tests indicated that fish so treated would keep in good condition for two years. Under old methods, large crystals, formed during the freezing, puncture the delicate tissues, permitting certain fluids to escape and thus spoiling the flavor. Persons blind-

folded and asked to taste, alternately, fresh fish and those prepared by the improved process, are said to be unable to detect any difference. After the fish are frozen, they are wrapped in parchment paper. No metal except aluminum is allowed to touch them. Cross-country shipping of fish thus is thought possible.

8 ELECTRICAL VOICE IS GIVEN THE CHORUS GIRL

Apparatus Installed in Orchestra Pit, as for Reproducing Voices of a Musical Chorus Number, and Examining Details of the Recorder

THAT nature does not put all her eggs in one basket is again instanced in the assembling and training of a chorus for a musical revue. Some girls are good-looking, some are graceful, some are excellent dancers, and some can sing; but to seek a combination of all these attainments in one chorus girl is to ask for the impossible. So a well-known producer of musical comedies decided some time ago to raise the vocal side of his presentations to the same high standing as the other features. Realizing that even if a chorus girl could sing, the physical effort might be too much in addition to dancing and acting, he sought the aid of scientists in evolving some means of supplying the desired vocal effect. The electrical reproducing device now available for home use

caught the fancy of the producer, and he immediately set to work on a plan for utilizing this general idea on the vast scale necessary for theatrical purposes. First, to meet the requirements of ample volume, to overcome the sound absorption of scenery, upholstery, draperies and closely packed audience of the theater, the power of the electrical voice, for such it is in truth, was increased tenfold. Even so, the volume was insufficient, especially as a complementary chorus to accompany the supporting orchestra, to be clearly heard. Then a hundredfold increase was tried and proved more than ample. Indeed, on the outdoor tests the electrical voice was heard at a distance of seven miles. Meanwhile, the producer commissioned the recording studios to attend to the vocal

Ant. Austin C. Leccarboara, Croton. n. Hudson. N.Y.

numbers. The best vocal talent was secured, trained in the quiet and orderly studio, and the polished performance recorded by the light-ray method, which assures a faithful record of exact rendition. It might be added that the light-ray apparatus consists of a minute mirror which vibrates with the impact of the sound waves striking a minute aluminum cone, thus sweeping a group of light beams more or less into the slots of a photoelectric cell. The latter has the property of varying its electrical conductivity according to the light which reaches it. Thus the sound values are translated into electrical values and delivered to an electromagnetic cutting tool, which, vibrating accordingly, engraves the soft-wax master record with a corresponding wavy groove. In due course, therefore, the producer obtains the necessary records for his vocal numbers. Perfectly synchronized, perfectly matched in pitch, the electrical voice has blended with the usual chorus and the supporting orchestra so perfectly that even the critics attending the first-night performance were unaware, at first, that the vocal effect of the chorus was assisted by mechanical means. The voice starts with a disk record which, in outward characteristics, seems much like the usual home-phonograph record. It is placed on a motor-driven turntable. An electromagnetic pick-up or reproducer translates the wiggles of the needle into corresponding electrical wiggles or variations, which in turn are amplified. The final stage of amplification makes use of a 250-watt tube—power comparable to that of many first-class broadcasting stations. The amplifier output is sent to cone reproducers in the theater. The entire equipment is in duplicate, to guard against possible breakdown. An operator stands by the mechanism, which is placed beneath the stage or in some other place, invisible to the audience.

More Comfort for the Baby and Mother While Traveling; Crib at End of Parlor Car

CRIB IN RAILROAD PARLOR CAR LATEST TRAVEL CONVENIENCE

Spacious cribs attached to the wall at one end of parlor cars in service on a southern railroad have proved of great aid to mothers caring for babies while traveling. They have railings to keep the infant from falling out, are comfortable and sufficiently roomy to provide the child with ample playing space.

INFLATED CAP HELPS SWIMMING

Cap, Inflated, Is Easily Slipped On or Off and Is Securely Held by Chin Strap

Buoyant rubber caps for bathing keep the head up so that the beginner is encouraged to be less timid and the experienced swimmer can float more easily. The cap is helmet-shaped, fitting well over the ears to keep out the water; the air-inflated double walls are soft and comfortable, and the protector is slipped on or off easily.

Stand By to Come About!

With Spinnaker Set and Wind on Quarter
the Yacht Heads for the Finish

By J. EARLE MILLER

"OUT spinnaker and ease the sheets!"

The skipper, from his post at the wheel, barks the best command the racing crew of a fore-and-after ever hears. The starboard watch is on, but the port watch comes tumbling up from below to lend a hand, for luck has changed, after four days and five nights of waiting, and now, almost in sight of the finishing line of the world's longest fresh-water yacht race, we've got a freshening breeze on the quarter to blow us into port, all our light racing canvas drawing.

Not all, rather, but most of it, for last night, to climax one of the slowest, most exasperating races ever run in the nineteen years of Chicago-to-Mackinac island duels—the classic of the Great Lakes—a three-minute squall popped up out of the southeast, snapped our fore topmast off three feet below the peak and sent our giant reacher and

Slipping Along in a Light Breeze, with More Sail Being Set, a Cutter Presents a Beautiful Sight; This Is the Favorite Rig for Large Racing Yachts Abroad; It Points in the Wind as Well as a Sloop and Has a Big Canvas Spread Approaching That of a Schooner

Compared with Men on Deck, the Lofty Spar of Sir Thomas Lipton's Last "Shamrock," Challenger for the America's Cup, Shows the Enormous Sail Plan Carried by a Fast Racing Yacht; It Takes a Heavily Weighted Keel to Counterbalance the Canvas in a Blow

one of the biggest fishermen the Great Lakes ever saw over the side in a slatting, tumbling, jumbled mass of flapping canvas and snarled rigging.

The single puff of that baby-sized squall left two hours' work behind it, clearing away the mess, but it was followed by a bit of rain and a capful of wind that hauled a couple of points to the southeast. This marked the end of 105 hours of constant beating up to windward and tacking back on long slants into the northwest, far off our true course to the northeast.

And now it is Thursday morning. The reefs and shoals of Waugoshance and Ile aux Galets—the Skilligalee of Great Lakes sailors—are left behind, along with the tricky winds and calms of Sleeping Bear point and the Manitou passage, and at last the telltale bit of bunting below the main mast crosstrees is whipping out to point directly over the port bow, advertising to all the world a fair wind over the starboard quarter.

With our fore topmast gone, the spinnaker boom, which should be rigged out to windward from the foremast to balance the main and foresail, the jib and staysail and the jury-rigged fishermen to leeward, can't be hoisted in its usual position, for there are no halyards left to raise it.

But the mainmast still has a spare halyard, and so the spinnaker goes up there, with its long, light pole, thrust far out to starboard, the outhaul ready in the block at its end. "Stand by to come about," the order of a few moments ago, has marked the turning point of the race. Our last long hitch to windward is over. The big spinnaker, a giant balloon of a sail, made of the lightest racing canvas, is hauled aloft by willing hands and begins to draw. Inboard, its peak spills the freshening breeze into the belly of the jury-rigged fisherman—one advantage of having it on the mainmast—and we are on our way.

A sailor speeds aft to the fantail and squats down over the recorder of the patent log, calling off the mileage to another standing by the chronometer. Five minutes pass, and the man at the clock calls time, and gets the figures back. A hasty calculation—the difference between two readings, multiplied by twelve—shows eight miles an hour, and the wind is freshening a bit as it hauls farther to the south.

"White Heather" Chasing "Lulworth" Home in a Stiff Breeze at Plymouth, England; with Everything Drawing and Decks Heeled Over, the Low Freeboard of the Yachts Is under Water to Lee

The next five minutes we foot along at nine miles, just about the best we have done since last Saturday night, when, eight hours out from the starting line, we rode out a four-hour squall with lee rail under, water swishing around the cabin trunk, and the bow bringing up tons and tons of green seas as it dipped into each choppy roller. We rode it out with our heavy canvas on, even up to a jib topsail, and logged better than twelve miles an hour—while it lasted—and that's not bad for the "Rainbow," our ex-Nova Scotian fishing schooner, built to battle heavy seas off the Grand Banks, but not for piling up the miles in fair-weather racing.

The main and foresail, eased far off to port to balance the hefty spinnaker, are drawing perfectly now, and the little four-bladed "spinner," trailing 125 feet astern at the end of the log line, turns over and over as it is dragged through the water, transmitting, through the twisting line, steadily mounting figures to our patent log—the speedometer of a ship.

We've left St. Helena, a pretty little island, astern, and off the port bow, five miles away, the lookout sights the bobbing iron-work tower of the Graham shoals gas buoy, the turning point where we will enter the Straits of Mackinac, better known as the Great Lakes' counterpart of the corner of Forty-Second and Broadway.

Down the straits, from the opening of navigation in the spring to the coming of the ice in the winter, there rolls a constant procession of huge lake-type freighters, 600-foot steel giants, loaded with their 12,000 tons of iron ore, bound for the blast furnaces of South Chicago and Gary. They come out of the northwest—down-bound from Lake Superior ports—pass Mackinac island under the whitewashed walls of the old fort, where the flags of France and later of England once flew, swing into the straits and join the parade from the lower lakes. There are big coal carriers from Ohio ports, bound for the Wisconsin shore, and equally big ones out

of Detroit, with new automobiles stowed by the hundreds in the hold and by scores on the deck.

Meeting them, north-bound from the southern ports of Lake Michigan, are the empty ore and coal carriers, hurrying back for another cargo, big grain freighters out of Chicago, and through and among these trucks of the seas scurry passenger liners, speeding to keep their schedules, and important, fussy little ferries, some with passengers aboard and others moving railroad trains from old Mackinaw, the northernmost point in lower Michigan, to St. Ignace, the tip of the upper peninsula.

From our position, we see them all and are glad the breeze is bowling us along at a good speed, with plenty of steerage way to dodge the lumbering red and black-painted freighters, for they are slow to give way for anything as small as our fifty-three-foot schooner. Last night, just before the moon popped up to lift the darkness around White shoals, a 500-footer, loaded with flivvers, came charging down, way off the regular steamer course, and for an anxious fifteen minutes it looked as though we and they were going to run a dead heat for an unmarked watery spot in the lake. Flashlights, played on our white canvas to supplement the usual running lights, had no apparent effect, and a

red Coston light, with cap snatched off, was just ready to be struck when the steamer's wheelsman came up a point and they passed us 200 feet astern. That was one race we won, even though we have lost—as we know we have—this one.

By how much we have lost it we begin to suspect when the glasses pick up a sloop scudding southward down the straits, eight or nine miles away, with all canvas furled, her engine sending her along at a good clip. By hull and rigging it is unmistakably the schooner "Gaviota," one of our worst enemies. Headed home under power means that she finished some time yesterday, while we are still bowling along under sail, with the regatta committee seals on our auxiliary motor intact.

The homebound "Gaviota" is the first of the fleet of fourteen we have seen for more than two days. Tuesday, while still trying to find a favorable breeze far over on the west shore, many miles south of Washington Island and the Porte de Mort—the "Death's Door passage" that some long forgotten Frenchman named in the days of Joliet and Father Marquette—we saw the last of our opponents. She was the yawl "Jeanette," sighted some miles ahead and several to windward, close inshore and still beating northward, when we caught a favorable wind to blow us

Getting In the Spinnaker Is a Job for Many Hands; as the Halyards Are Slackened Away, the Great Folds of Fluttering Canvas Must Be Subdued and Brought Down to Deck

across the lake to the usual Mackinac course, around Point Betsy and the Manitou islands.

We learned later she kept on north clear to the Whiskey Islands, and then bore east to beat us across the finish line by less than two hours.

While we watch "Gaviota" chugging southward, "Rainbow" breasts the gas buoy off Graham shoals, the helmsman spins the wheel hard over and we trim sail and point up for the finish line, in plain sight seven miles ahead. A long string of signal flags, whipping in the breeze from the tall wireless mast atop the highest hill above Mackinac fort, spell out a welcome in international code.

Beneath the fort on the narrow strip of beach nestles the town, and at the water's edge the glasses pick out the tent of the regatta committee, pitched beside a flagpole from which flies the burgee of the yacht club. A lone committeeman, lounging on watch in the shade, comes to life, and through the binoculars we watch him slip a shell into the signal gun and stand by, lanyard in hand, ready to give us the finish signal.

The skipper, at the wheel, orders the crew to stations ready to take in the spinnaker as soon as we get the gun. A puff of smoke leaps from the signal gun and on its heels we get the report. Down spinnaker and stand by to take in the fisherman, foresail and the main topsail. A sailor at the chronometer calls the time, 12:43 o'clock. We made it in four days, twenty hours and forty-three minutes.

Under main sail, jib and staysail we glide up the harbor, passing across the bows of the sloop "Intrepid." No need to ask the name of the winner—from the tip of her lofty Marconi spar she flaunts a broom, and one of her crew calls across the news that she won that more than 300-mile race by ten seconds!

That's yachting on fresh water.

Umbrella Bag Open, in Carrying Position and Loaded with Articles for the Beach; It Is Light and Waterproof

Courtesy American Exporter

FANCY PARASOL FOR BATHERS ALSO SERVES AS BAG

Besides keeping the sun from the bather while on the sands, a brightly colored rubberized parasol may be used as a bag for taking articles to or from the beach. A wet bathing suit, for instance, can be tucked inside and will not drip, and other things may be carried. A string connects all the ribs of the parasol, to bind them together when it is used as a carrier.

BOX FOR SHUFFLING CARD DECK REQUIRES NO SKILL

Cards are mechanically shuffled in a box containing compartments which mix them thoroughly as the holder is moved up and down. A small door which

closes tightly prevents the cards from falling out. The device insures a good shuffle and eliminates possibility of stacking deck.

SUB'S WRECKAGE TELLS MUTE STORY OF TRAGEDY

Secure at Last in Drydock at New York, the "S-51" with Two of the Pontoons That Helped Lift It from the Ocean Floor; the Gash Cut by the "City of Rome" Is Visible in Front of Conning Tower

Examination of the "S-51" has shown the crew's efforts to prevent sinking when the submarine was rammed by the "City of Rome," Sept. 25, 1925. According to testimony before the naval board of inquiry, the engine telegraph in the control rooms registered "ahead, both engines." Evidently, this was the last order from the commanding officer to the engine room. But the clutch to the starboard engine had been thrown three-quarters out and that of the port engine entirely out. The throttle was in "stop" position and the air throttle "cracked," or barely open, as if one of the engine room squad had tried to shut off the air when he was caught by the water. All this is held to indicate that the crew tried to avert disaster without waiting for orders from the bridge. The rudder was turned hard to right, showing that an attempt had been made to swing away from the "City of

Rome." Watertight doors separate the five compartments of the submarine but, apparently, the water rushed in so fast that the men did not have time to close them. Bodies were found in all compartments. That the crew died at their posts of duty was also indicated. The body of Lieut F. D. Foster was found in the engine room with his hand extended toward one of the control valves. James Marlow Schofield, the radio operator, died with his earphones on his head and his hands on his instruments. The disaster claimed the lives of thirty-three of the crew of thirty-six. Seventeen bodies were found in the hull when it was taken to the drydock in the New York navy yard. Raising the submarine was one of the most difficult tasks ever attempted by the navy.

¶Thirty years will be required for the restoration of Rheims cathedral.

DRAIN EVERGLADES FOR PLANTING RUBBER?

Can Florida's millions of Everglade acres be dried up and planted to rubber trees and garden crops? The problem is said to be under consideration by federal reclamation experts, and a survey to determine the engineering requirements of such an undertaking has been authorized, it is reported. The first step necessary would be to lower the waters of Lake Okeechobee to a level where they would not overflow the southern banks and flood the territory. The second would be to drain off the heavy rainfall on the Everglades themselves. Canals already have lowered the lake about five feet. To lead off the rain, which averages from fifty-five to sixty-five inches a year and often falls in torrential downpours, would require large canals. One already dug is twenty-five miles long, 200 feet wide and varies in depth from fourteen to thirty feet. Much of the land in the Everglades is exceedingly rich, so that some of the experts believe that it would produce sufficient return in garden crops to pay for much of the reclamation work in a year or two.

INDEPENDENCE HALL MODELED IN SUGAR

Fashioned entirely of sugar and without molds or reinforcement, a replica of Independence Hall has been prepared from an old woodcut of 1781, for exhibition at the sesqui-centennial exposition in Philadelphia. The artist is said to have completed it in the short time of twenty hours.

Riding Swaying Log in Scene from Motion Picture; Actor Supported Most of His Weight with Hands

RIDING LOG OVER DEEP CHASM AFFORDS MOVIE THRILL

One of the high lights in a sensational scene from a German motion picture was gained by having the hero, while clinging to a log, ride across a deep canyon. The swaying of the cable above and the yawning chasm below made the feat appear sufficiently risky to give the audience the thrill desired by the producers.

Salts contained in the ocean, if removed and spread over the United States, would make a layer more than a mile and a half deep, it is estimated.

Harry Piel, German film star

What is Your Pet

IF you got up on the morning of Friday the thirteenth, broke the mirror while dressing, spilled the salt at breakfast, opened your umbrella in the house and walked under the painter's ladder when going to work, would you have an unlucky day?

Probably.

And not because any of those things in themselves are harmful. But anyone who performed that particular combination, or any part of it, hardly would be in proper mental and physical condition to have a very successful day. Breaking the mirror and spilling the salt are apt to be indications of bad nerves, which aren't conducive to a lucky day. Absent-mindedly opening an umbrella in the house where it may swipe the bric-a-brac off the tables and knock the pictures off the walls, or walking under the painter's ladder at the risk of being crowned by a carelessly dropped bucket, both indicate that you may, in equal absent-mindedness, walk in front of a street car or automobile or perform some such other unlucky stunt later in the day.

So you see there really is something to your superstitions, after all.

Many of the commonest superstitions are well grounded in fact, even though the fact is not apparent on the surface. Children who disturb grouchy elders by singing early in the morning are told that one who sings before breakfast will cry before night. As there usually is a certain amount of singing and a certain amount of crying in a child's day, it is pretty safe to say that, if the day starts with one, the other will come along in due course. And if a particularly grouchy person is awakened by early-morning song, the crying is apt to come before breakfast too!

The superstition often impressed on children that whistling or singing at the table is unlucky has the same well-founded basis in fact, as children often learn when they persist in the practice.

Gamblers believe that the person who lends money, during play, to a fellow player, will be unlucky, and the borrower will be lucky. Inasmuch as the lender has decreased his available capital, and therefore limited his chances, and the borrower is playing on borrowed money, with consequent increase of his chances, the belief seems quite well grounded.

The reason for many commonly held ideas, however, is not so easily found. Some of them go back thousands of years into prehistoric times, coming down to us, often in corrupted forms, as the remnants of ancient and forgotten religions. The black-cat superstition is a direct descendant of the days when the cat was worshiped in Egypt.

Mask and Costume Used in Tibetan Mystery Play from Collection of Field Museum

Superstition?

Some years ago the swastika swept the country as a lucky emblem. As a basic form of design, it was known in the Orient thousands of years ago, and recent excavations have disclosed that it was similarly used as a religious ornament by the Mayas and the Incas of Central and South America hundreds of years before Columbus discovered America. As a lucky emblem, it was based on Oriental legends where it has played a part in religious worship for centuries.

The swastika and the black-cat pin, and scores of other lucky emblems, went their way in due course, and along came the "Good Fairy." Rotary clubs and business organizations helped distribute the charming little statuette and advised their members to keep one on the desk to bring good luck. Quite probably many of them did, for just to look at the graceful child figure was enough to put one in a good mood, which is the first essential toward a good day.

The superstitions attached to numbers are not so easily explained. Seven has been a lucky number from remotest times, just as thirteen has had a reputation for being unlucky. The favor shown seven is easily traced to its Biblical connections, the world, according to Genesis, having been made in seven days, while the number reappears repeatedly in the visions John saw on the isle of Patmos. The bad luck attached to thirteen may possibly date from the Last Supper, when Christ and the twelve disciples formed thirteen at the table.

Why Friday should be an unlucky day on which to start a journey is hard to see

Good-Luck Rings from Many Lands; for Centuries, the Finger Ornament Has Been Associated with a Wide Range of Mystic Influences

in these days of modern transportation, but in olden days when stagecoaches did not run on Sunday it quite possibly meant that many Friday journeys were broken by the week-end halt away from home.

A horseshoe nailed over the door certainly isn't unlucky, so long as it remains in place, and might bring decided ill luck if it fell while someone was passing beneath, but it is probable that the horseshoe myth has a very simple explanation. An old shoe, studded with rusty nails, and left lying on the ground, might be very unlucky for one stepping on it, whereas if everyone was convinced that to nail it up brought luck, the danger of lockjaw from a nail puncture would be definitely removed.

But can anyone explain why the wishbone of a fowl should be a harbinger of luck, or why a wish made while breaking a wishbone would be granted the holder

226

of the larger piece? The luck supposedly attached to four-leaf clovers is an equal mystery, probably going back to a religious symbolism that may be as old as the swastika story or the cats of the Nile.

One of the most modern luck systems, which sprang into prominence during the war, is the chain letter, supposed to go three times around the world, in some versions, and in others to be duplicated and sent to nine or ten friends, who in turn send copies to as many more, until, if all carried out the behest, the postage bill would pay off all the world's debts. The chain letter probably started as a diversion to interest the soldiers thou-

sands of miles from home, but the names that have been attached to some of them in their wanderings form a surprising commentary on the reluctance of even the world's most brilliant people to risk a possible run of bad luck.

Sailors probably hold more than their share of superstitions, some inexplicable to a landsman, and others easily traced to their source. One of the oldest and most general is that it is very, very unlucky to whistle on shipboard—in fact, in the navy, it is forbidden. Since no crusty old merchant captain or salty admiral of the line likes to have his nap spoiled by unseemly sounds from the crew, it is quite easy to see how the myth of bad luck attached itself to whistling.

A few years ago a navy officer, detailed as governor of a Pacific island possession, decided that, since the navy ruled the land, ship rules should apply, and he forbade whistling at any place in his island domain. As a sequel two whistling marines deserted and sailed for Japan in a native boat and nearly died before they were rescued at sea. The story leaked out, a court of inquiry was ordered and the officer killed himself to escape court martial. That is the only case on

Starting a Journey on Friday Means a Disastrous Ending, So Some Believe; Seeking Beauty by Bathing Hands in Dew at Sunrise

record where not whistling was unlucky.

The practice of christening ships by breaking a bottle of champagne (before prohibition) or something else over the prow as the boat starts down the ways dates back to the days when libations to the gods of Tyre, Sidon, Carthage, and, later, Rome were poured over a newly built vessel. Sailors believe that if the sponsor is inept and fails to break the bottle the ship will be pursued by bad luck.

The belief that a person falling from a great height died a merciful death by losing consciousness because of the rapidity of his fall persisted for centuries until, only a year or so ago, airmen finally exploded it by deliberately falling 1,500 feet and more before opening their parachutes—and retained consciousness all the way. An equally old belief, with no more basis in fact, is that a person drowning or fall-

ing sees his whole past life sweep before him in a mental picture. As a matter of fact, some persons who have gone down two or three times in the water and then been fished out and revived, report they did review their past, while others insist they were busy thinking about the possibility of a future.

CENTER LINE ON AUTO ROAD PROLONGS ITS LIFE

Paved auto roads with a line painted down the center last longer than those not so marked, according to George F. Schlesinger, Ohio highway director. He explains that motorists do not go too close to the edge of the macadam or other paving when the line is present, as they feel safer in driving near the mark. This reduces the breakage on the sides.

WIND RESISTANCE IN MOTORING 86

And
That the velocity of the wind makes a material difference in the speed of his car is realized by every motorist, but just what the resistance amounts to is not a matter of common knowledge. The increase in resistance is not in direct proportion to the increase in the velocity of the wind. For example, a wind of fifty miles an hour exerts a pressure of ten pounds against each square foot of surface directly in its path, while if the wind velocity doubles or the body moves through the air at a speed of 100 miles an hour, it meets with a resistance of forty pounds per square foot. To travel at fifty miles an hour against a head wind of equal velocity, sets up a total resistance to the movement of the car of about 1,000 pounds.

At this speed, the total pressure exerted against a man of ordinary size would be equal to a 200-pound weight distributed over the upper half of the body, and it may be conceived that breathing under such conditions is rather difficult.

SHOE POLISHER FITS IN POCKET AND CARRIES CLOTHES BRUSH

Shoe polisher and clothes brush have been combined in a compact outfit that can be folded up and carried in the pocket. The shining material is wool sheepskin on a leather back and the brush slips into a small open bracket attached to the polisher.

MAIN CAUSE OF SEASICKNESS LIES IN INNER EAR 46

Physicians no longer regard seasickness as a mystery and, besides discovering its chief causes, have found ways to relieve it. The trouble, in most cases, has its origin in the well-developed, delicate inner ear, near the seat of the body's balancing apparatus. Infants and deaf persons do not suffer seasickness, indicating that the ear theory is correct. The rolling and dipping of the vessel cause an overstimulation of the nerves in the balancing area and this disturbance in time is communicated to the nerves that lead to the stomach, heart and other organs with the consequent illness. Dr. P. H. Desnoes, a port medical officer, recommends that persons contemplating an ocean voyage observe a few simple rules of hygiene and diet for a week or so before going aboard to avoid serious seasickness. Abundant sleep, horseback riding and swimming are favored and foods with an acid reaction should be avoided, he says. On board, little liquid should be taken at meals but plenty between, only the foods that appeal to the appetite should be eaten, and the mind should be pleasantly occupied.

TAXICAB WITH LOTTERY WHEEL GIVES PATRONS FREE RIDE 11

Taking advantage of the public's love of gambling, owners of a taxicab company in Montevideo, Uruguay, have painted the left rear disk wheel of their vehicles with numerals from 1 to 20 and fitted a pointer in vertical position to the axle. When a patron hires a cab, he and the driver note the number at which the hand points when the trip is started. If it indicates the same numeral when the destination is reached, there is no charge for the ride. This concern is now said to have a larger patronage than any of its competitors.

How To Be A

by Knute Rockne

Capt. Jim Manning, of Last Season's Fordham University Team, in Action, and, Above, Harvard Candidates Attacking the Charging Machine to Build Up Stamina for a Hard Game

ability to knock down forward passes and to ward off would-be interferers by use of hands and nimbleness of foot. Get eleven boys together who have all or most of these abilities and, with plenty of hard practice and drill, you can whip them into a team that moves like one boy.

The one point where the average high-school or neighborhood team is weak,

It doesn't take an expensive supply of purchased equipment to outfit a boy for high-school or neighborhood football, which is one of the important reasons why football is such a popular game. In fact, the average boy, with a bit of ingenuity and the odds and ends of things he already has, can assemble a complete outfit for himself at practically no expense.

If a boy hopes to be a good football player the main things he needs are brains, courage, self-restraint, co-ordination, fire of nervous energy and an unselfish point of view, ready to sacrifice for the team as a whole. Of course, he must have a bit of speed and a bit of physique, but then these things are taken for granted.

Books have been written by many coaches on how to play football—I have written some of them myself—and none of them tell all the story. Yet, the basic things can be summed up in a very few words. The essentials of offensive football are blocking, interfering, ability to handle the ball and perfection in the execution of details. The main points in a defensive game are tackling,

One of Rockne's End Runs; the Attacking Team Is Shown in Black, with Center in White, and Defenders in White with Black Center

Football Star

Athletic Association Notes

however, is in appreciation of the necessity of hard work and constant drill. It is so much pleasanter to go out and play a game than to spend hours working over tackling, running, signals and other drill points. Without the training, however, there can't be much success in the playing. It isn't enough to master the mechanical details of the game, learn signals and complicated plays. The good team is the one that is able to study the other fellow and beat him by quicker wits. You not only have to know when to do a thing, but when not to do it. Take forward passing, for example. The good quarter back—and the quarter back must run his team—needs to know when to try a forward pass, but more important still, he must know when not to try it.

A good team will not try to forward pass against a strong wind; it will not forward pass while deep in its own territory, unless it is behind or near the end of the game; it will not forward pass near the opponent's goal line except on fourth down; it will not forward pass when the opposing team is plainly expecting one; nor will it forward pass when it is ahead in the score. In other words, the good quarter back gambles only when he has nothing to lose and everything to gain. When he has everything to gain, as for example when his team is behind, then he resorts to the pass.

A book of advice for the quarter back alone could easily be written, without telling everything he ought to know. He must have confidence in himself, and have control over his team, so that when he stakes everything on a play there will be no questioning of his judgment. He must bark out his numbers clearly, distinctly and loudly. When in doubt, he must remember that it is always the safest thing to punt.

Capt. McGrath, of Last Year's Georgetown Team, Catching a High One, and Army Players Tackling the Dummy, Above

Knute Rockne, the Coach Who Developed the Famous
Four Horsemen of Notre Dame

Plays do not mean as much on offense as the average boy would think. One team will put on some plays that work wonderfully well, and another team will try the same plays and they look terrible. It is all a matter of execution. The quarter back should keep track of the plays that have worked and those that have failed, then drop the latter and push the former. That is one of the big things emphasized in any book on football tactics and strategy.

Getting back to homemade equipment, though, how many boys know that they don't need a special pair of football shoes, special football pants, shoulder guards or a helmet? You can make a very serviceable pair of football shoes out of any old pair of everyday ones by simply nailing on a set of fiber cleats, which can be obtained cheaply from a sporting-goods dealer or the maker. A pair of swimming trunks seems a queer thing to include in a football outfit, but if you sew a pair of fiber thigh guards to them, don the trunks and put on an old pair of khaki trousers over them you have all the leg protection you need, as shin guards are no longer in fashion. Cheap cotton hose and jerseys don't cost much, and on the shoulders of the jersey you can sew in some horsehair padding, such as you will find in an old buggy or automobile seat, and have good shoulder protection. You may be surprised to know that a headgear is not necessary, and that quite a few college players have never worn one, yet have never received a head injury. The headgear serves chiefly to protect the ears, and if you feel that you must have one, buy the cheapest you can get. Nose guards, like shin guards, are obsolete.

I haven't much to say on what a boy should eat, as the old-fashioned ideas on strict training are also becoming passe. Of course, a boy should absolutely abstain from stimulants (even coffee must be taboo) smoking and poisons, such as alcohol, but if he eats at home the fine home cooking which his mother prepares is good food for any football player. There are just a few things he ought to stay away from. They are chocolate, cocoa, chocolate candy, greasy fried potatoes, pork and bananas. These things are all hard to digest and the average boy will

Batteries of Powerful Lights Strung above Carson Field, Cincinnati, Enable the University Team to Meet Opponents after Dark: 32,000 Watts Make the Field Nearly as Bright as Day: Below, Chester Bowman, Olympic Star Runner, Is Shown Bucking the Shoulder Straps in Practice for the Syracuse Team

George Wilson, Captain and Star Half Back of Last Season's West Coast Champions, the University of Washington, Shown Carrying the Ball

find that they do not agree with him when he is playing football. Boys should eat regularly, three times a day, and must not eat between meals. The meal before a

An Off Tackle Play Designed by Rockne; Note the Back Four, with the Ball, Has Two Routes Open

game, however, must be very light. This is important. The boys should not eat when they are tired. They should not drink ice water before a meal. If a boy bears these few things in mind, he will find that, as far as the stomach is concerned, he will feel fit for the game. Boys should go to bed every night around ten o'clock and should get at least nine hours' sleep. They should not take the game too seriously but should try to get as much fun out of it as possible. Do not try to play, if you are hurt, and be sure to have all injuries treated by a competent physician. Towels applied as hot as you can stand them will be found a great relief to most bumps and bruises. However, don't be a mollicoddle—remember that football is supposed to bring out the Spartan in the young boy, which means to make as little out of an injury as possible, not losing, however, the common-sense point of view.

The proper way to tackle a man is to

A Plunge in Which Back Four Fakes as Though He Had Ball, While Two Clears Way for Three

crouch down low with the weight well forward, head back and eyes open and knees well bent. Keep your eyes on the man you are tackling, particularly his hips, drive at him with all the power of your legs and hit him squarely with the shoulders and the instant the shoulder lands, wrap your arms around him and pull the arms toward you as hard as you can, still shoving through with the shoulders, and take one or two short, digging steps. This will throw the ball carrier back in the direction from which he came. It stands to reason that if you knock him off his feet he cannot go any farther. The high spots of tackling, however, are lots of leg drive, eyes open, and using good judgment in timing and distance. Sometimes, when the ball carrier is far to one side, the tackler will have to leave his feet and throw his body in front of the ball carrier, wrapping his arms around him as he does so. This will cause the ball carrier to fall over

A Weak Side Play in Which a Hole Is Opened through Which Back Three Plunges with the Ball

the body of the tackler, as he is obstructed by his body and cannot get away, having the tackler's both arms wrapped about him.

Blocking is the means used by an offensive player to keep a defensive player from the ball carrier. Interference is collective blocking. In the line, there are two methods of blocking generally used. If the opening of a hole is intended, the offensive lineman charges into his opponent, hitting him a little bit above the knee, using short, digging steps, with lots of leg drive. The legs should be well straddled, tail low, head back and eyes open and you should stick to your man as long as you can. If, however, you are merely blocking him to prevent him from getting through to hurry the passer or to hurry the kicker and it is not necessary to make a hole,

then the offensive lineman merely slaps his hip in the opponent, getting the head and arms beyond him and using all the length of his body as a blocking surface. Do not go so low that the defensive man can jump over you. These two types of blocking, of course, are used against stationary players. Out in the open, the block to use against a running opponent is what is known as the cartwheel. This means to throw your body horizontally at your opponent very much the same as the diving tackle, only you do not use your arms. You hit him with your hips or side and keep on rolling. Get plenty of leg drive and be sure to dive through the man, not merely in front of him.

The points to remember on defense are that the guards, tackles and ends must charge through their own territory as if expecting the play to come over their hole. The defensive center is allowed certain liberties and may be in the line charging. He may drop back three yards or he may be in the line non-committal, ready to charge or pull out, depending on what kind of play comes along. If the other team has first down ten, the defensive center will be in the line but ready to pull out to help tackle on the flanks. If it is second or third down, small yardage to gain, the center will line up on the line

and charge through. If it is second or third down, many yards to gain, the defensive center can drop back several yards to a position where he can best defend against that which under the conditions he has every right to expect—a forward pass or a trick play. If the opponents have a formation where the quarter back receives the ball from the center, the defensive center will be in the line charging. If the other team, however, is using the direct pass to the ball carrier, then the defensive center can be in the line ready to pull out or he can drop back several yards. The man backing up the line is responsible for line plunges and end runs. When the other team has second or third down, many yards to gain, he should be more alert for forward passes and may drop back several yards. The half backs are responsible mostly for forward passes. The man playing safety on defense will have to be a good punt catcher and can also help defend against long forward passes. On defense, every boy should take it upon himself to do everything in his power to stop the play that the opponents put on, but above all, he must use his hands, be shifty on his feet and use his eyes. See everything.

Harvard Tries Out a New Device for the Perfection of the Forward Pass, a Sheet of Canvas with Holes, through Which Ball Is Tossed

Red Grange, the Wheaton Iceman and Greatest Player of Recent Years, Who Made a Fortune in a Few Weeks

One of Rockne's Many Forward Passes, Used by the Famous Four Horsemen

One of the things the quarter back must learn is that, if a punt looks as though it would roll for touch back, he should not try to catch it. Close to his own goal line, he should kick on first down unless he intends to play for position. When

near the sides lines, it is always best to run a play for position. The quarter back should keep his eyes open and watch for weak spots in the opposing team, and when he finds one not forget it. Against a strong defensive team, kick, kick and keep on kicking. On a wet and muddy field, kick and let the other fellows take the chances of fumbling the ball. Always be sure that every man on the team is ready before you call a play. Usually you will find it best to charge on the next number after the signal, instead of on the signal itself. That gives the boys a second to get set for their specific job. Maneuver to keep away from the side lines and near the center of the field as much as possible. Watch who makes a tackle and it may suggest a play to you. Use punt formations deep in your own territory and save your close attack until after you get past the middle of the field. Stall when you are playing against the wind, and speed up the game when you have the wind behind you. Likewise stall when you are ahead or when your team is tired, and speed up when you are behind or when the eleven are hitting on all cylinders. Save your best forward-pass plays for the second half. If you have a weak kicker you can try a long forward pass in your own territory. Against a team which has a powerful offense, hold the ball as long as you can.

Don't try to handle a kicked punt which is rolling uncertainly, and when you are

catching a punt and you see the opponents have their ends right on top of you, signal for a fair catch. Be sure that you are able to tackle in the open, but, if you can maneuver a ball carrier toward the side lines, do it.

In offensive territory, use your best play on first down. By best play I mean the one that has proved the biggest ground gainer. Try a trick play or a long ground gainer whenever you have recovered a fumble, as you will then catch the defensive team up in the air. When the defensive line tightens, use end runs, and when they spread out, use line plunges.

FLAMES HELP DEAF CHILDREN LEARN HOW TO TALK *91*

Sensitive gas flames that dip and sway when vibrations of the voice come in contact with them are used by an English instructor to help teach deaf children speech. The little tongues of flame shoot up through hollow tubes and can be regulated as desired. They give the child a visual picture of his voice as a substitute for the sound impression received by the person of normal hearing. For example, certain vowel sounds cause the flame to dip sharply such as the "ar" in carpenter and the "a" in table. By stationing the child farther away from the flames, he learns to speak louder and develop his voice.

Deaf Children Learning to Talk with the Aid of Sensitive Gas Flames Which Move with the Voice Vibrations

Covers on Seats, Door, Wheel and Clutch, and Above, over Fenders, Cowl and Hood

FABRIC COVERS PROTECT AUTO WHILE BEING REPAIRED

Stains are kept from the auto upholstery, and fenders, cowl and hood are protected against scratches while the car is being repaired, by fabric covers quickly slipped over the parts most likely to be damaged. It is said

that the entire set can be adjusted in less than three minutes. The durable fabric can be washed without shrinking and the shields are made in various sizes to fit almost all makes and models of cars. Covers for the seats are intended to be left in place, if desired. They fit snugly and are attractive.

Comic Face on "Slicker"; It Changes Expression as Garment Wrinkles and Has Movable Eyes

ANIMATED FACES ON "SLICKERS" LATEST FASHION NOVELTY

With almost every movement of the wearer, faces painted on slickers with waterproof paints, change expression, for the eyes, lashes and lips are inclosed in celluloid compartments and are movable. Animal designs are also devised in the same way, and for those who desire something distinctive, a skull pattern is provided.

DESK MEMORANDUM ON ROLLER ECONOMIZES PAPER

Paper is supplied as needed for making notes from a roller pad placed on the desk. A strip, four and one-half inches wide, is carried on a pivoted reel on top of the holder and is unwound by turning a

Can be ordered from Henders

milled-head screw. At the upper end of the pad is a metal straightedge for tearing off pieces to be filed away.

PEDALING PLAYER PIANO AIDS TREATMENT OF FEET

Operating a mechanical piano in stockinged or bare feet is recommended by an eastern physician to help strengthen the foot muscles and to relieve arch troubles and other ailments. Besides the exercise of pumping the pedals, the music takes the patient's mind from his pain, the doctor asserts, and he believes the response of the muscles to the vibrations of the instrument exerts a beneficial effect. The player-piano method is superior to dancing or operating a bicycle, the physician declares. The importance of proper care of the feet is now widely recognized, and most doctors agree that many ailments can be traced to their abuse. It is said that ninety per cent of all foot afflictions are caused by improperly fitted shoes.

SHADE FOR AUTO HEADLIGHTS KEEPS RAYS ON ROAD

The principle of the eyeshade has been adapted to automobile headlights in a metal shield that fits over the bulb and can be adjusted

to keep the rays of the lamps on the road instead of shining into the eyes of approaching drivers. The deflector is made to fit on any standard light and is quickly put on underneath the outer rim of the lamp. It may be bent or turned to any desired angle.

STAINLESS STOCKINGS

Waterproof imitation-silk stockings that are not stained by mud splashes have appeared and are available in any shade desired. A method has also been devised for giving the material the dull sheen characteristic of genuine silk instead of the bright luster of the artificial product.

COSTLY GARDEN BUILT IN TERRACES ON HILLSIDE

Terraced Garden on the Grounds of a Private Estate in California; Tinted Sandstone Walls to Support the Steps Produce Pleasing Color Combinations, and the Different Levels Are Connected by Stairways

What is believed to be the world's costliest private vegetable garden is being completed in southern California. It is of the "hanging" or terraced type, comprises one acre of level land, and represents an expenditure of \$75,000. The owner's estate is on the high hills, and the only spot available was an amphitheater-like slope, which has been converted into an extraordinary garden. Employing a beautifully tinted sandstone, a series of gracefully curved walls, aggregating more than a mile and a quarter in length, was built to form the terraces. Embodied therein are numerous boulders, weighing up to a ton and a half each and requiring hand hoists for placing. The average height of these supports is four and a quarter feet, though some rise eighteen or twenty. The soil surface on the terraces is from six to ten feet wide and averages eight. All are connected by three-foot

stone stairways, each of the lower tiers having four, and these steps zigzag and fit in so admirably that they are not readily detected at first glance. In the middle section, they assume the character of stone ladders. The terraces have an easy grade from north to south and are watered by a gravity irrigation system.

HINGE TOP ON SAFETY HELMET ADDS TO WEARER'S COMFORT

Provided with a front section that tips up over the head on hinges, a safety helmet for workers does not have to be removed, when not in use as a protector, and can be closed quickly in case of an emergency. When raised, the movable part stays up out of the way of its own accord and fits snugly, yet not uncomfortably, well down on the neck and chest, when lowered.

The Magic Lure of Ciphers

Secret Writing Has Saved Scholars' Necks and Won Wars;
How Mystery Messages Are Formed and Solved

By PAUL PADDOCK

IF you should lose your pocketbook while traveling abroad, the single word "sooty," cabled home, would tell the folks that you were in need of funds. And if you received the word "stall" in reply, you would have a right to feel disappointed, for it would mean, "no more money will be sent." If the business man wants to be kept posted on affairs while in foreign countries, the brief message "otter" will order his firm to "keep me well informed as to business. If anything important occurs, do not fail to wire me."

The foregoing expressions are taken from a travelers' code system of some 2,000 terms, each of which stands for a whole message. Many firms and individuals have their own systems of secret communication by telegraph, cable and radio, and at Washington, a number of experts in the department of justice and in the signal corps of the army are constantly at work, revising and translating codes and ciphers that carry important state and military secrets in peace times as well as in war. The dot-and-dash signals that sometimes interrupt your radio programs, crossword puzzles, writing for the blind and shorthand are also forms of this art of cryptography, or secret writ-

ing, one of the oldest and most difficult sciences known to man.

Discussing this science, Edgar Allen Poe once declared, "it may roundly be asserted that human ingenuity cannot concoct a cipher which human ingenuity cannot solve." He partly substantiated his position by deciphering scores of complex codes sent to him for tests. But it is not necessary to go back to the author of "The Gold Bug" for proof of the statement. The Riverbank laboratories, near Geneva, Ill., for more than thirty years, have been demonstrating that Poe was entirely right.

Calling on Col. George Fabyan, founder of the institution, for a glimpse into this fascinating world of hidden meanings, you step into one of the most remarkable libraries in the world. Here, among first editions of Shakespeare and hundreds of other rare old volumes, are some 39,000 different ciphers. Years ago, Col. Fabyan became interested in the subject of cryptograms while seeking a secret code for use in his business. To satisfy his curiosity, he scoured the world for books relating to ciphers.

After a few moments' talk with Col. Fabyan you learn that cryptography probably originated several centuries before Christ, very likely under the direction of the famed Assyrian queen, Semiramis. At any rate, one of the earliest examples of cryptography is found on her tomb. Some 700 years after it was inscribed there, an expert laboriously deciphered it, and this was the reward for his labor: "O poor miserable slave of deciphering that thou art, from this time on, occupy thyself with more

Even a Brick Wall May Tell a Story in Cipher; White and Shaded Blocks Here Are Arranged to Spell a Short Poem

Another Illustration of the Almost Limitless Possibilities in Cipher Picture Writing; Here, the Hens Represent One Part of the Cipher and the Chicks Another; the Word Is "Egg"

fruitful things than to spend time thus uselessly!"

The Spartan soldiers employed an ingenious cipher system, using strips of parchment wound in a special way around a wooden cylinder. The writing was inscribed longitudinally, the parchment removed and dispatched. The officer who was to receive it had a cylinder exactly like the one on which the strip first had been wound. He wrapped the parchment on his cylinder making the original message clear.

Bacon and other scientists in the time of Queen Elizabeth wrote profusely in cipher for self-protection and secrecy because, at that time, anyone who had scientific knowledge was likely to be suspected of being in league with the devil and to be beheaded.

A method of inserting ciphers in books was worked out by using different forms of type, and as the printing was absolutely controlled by the government and all typefounders and printers licensed, heavy penalties were imposed on persons who used printing presses without government permission. Thus it was possible for those having control of printing to insert ciphers in the books for the purpose of recording any information they chose with the idea of having it available for others of the time or for posterity.

"The use of ciphers," Col. Fabyan declares, "seems to go by cycles. About every 300 years, they reach a high point. We have just passed through one such

period in the World war. All true ciphers can be grouped into two great classes, transposition and substitution ciphers. Frequently, an expert can tell almost at a glance to which class a particular cipher belongs. In the first class, the letters have been rearranged to conform to some plan; in the substitution cipher, numbers, designs or what not are substituted for the real characters. Suppose you let Miss Cora Jensen here, one of my assistants, show you how a real cipher is tackled."

Miss Jensen led the way to her office, where more bookcases filled with works on ciphers lined the walls. She produced a long sheet of paper, ruled in tiny squares. This jumble of letters, grouped in units of five, was written in pencil:

LXFZI QCTAM PCSPT RFZIQ SPLOL
RFZIQ GFASP TGTCP OFCTR FZIQS
PLBTH TVSPX LAMTR MTGRP FOAFZ
RMLGN ETCLX FZIQC TAMPC SPTMT
BSPPG AMTGT HLNMA MTYPS PPGSV
OTCOF CTMLN MAMTY PSPPG MTBGP
YPCPS PGSZA TMTBX TBFGR PTGTC P

"This is what is known as the reversed single-alphabet cipher," Miss Jensen said. "It looks hard but it really isn't. One of the first steps in solving a cipher of this kind is to count the number of times each letter has been used. This is important, for we have discovered, after counting the characters from thousands of pages of many kinds of manuscript and printed text, that, in English, the letters are used in the following order of frequency, e, t, a, o, n, i, s, h, r, d, l, c, u, f, m, p, w, g, y, b, v, k, x, q, j, z. In other words, the vowels

Illustrations of Early Egyptian Picture Writing, Possibly the Beginnings of the Alphabet as We Know It Today; Designs Similar to These Are Sometimes Made into Ciphers for Modern Usage

occur about forty per cent of the time, the consonants l, n, r, s, t, about thirty-five per cent and j, k, q, x, z, less than two per cent. The order varies somewhat in other languages, but the e is always first."

Miss Jensen rapidly wrote the alphabet in a column down the side of a sheet of paper and then put a check after each letter as it occurred in the cipher. Before she had gone very far, it was apparent that the t's, p's and f's were leading, while the a had been used but five times and the e, the most frequently used letter in the alphabet, not at all. Evidently, then p or t, stood for e. To illustrate, Miss Jensen made the substitution, putting down p as the cipher equivalent for e, t for a and other letters as they evidently fitted the frequency guide.

The cipher, with the translation written above it, then looked like this:

SUBSTITUTION CIPHER

1 2 5 6 2 5 5 6 1 3 1 5 1 2 1
1 2 6 1 3 5 3 6 1 2 4 5 1 5 5
6 3 1 5 1 2 6 2 3 3 5 5 4 4 4

—KEY—

1 2 3 4 5 6	1 2 3 4 5 6
N O P Q R S	A B C D E F
G H I K L M	T U W X Y Z
J	V

The Message in Cipher Above Is "The Surest Way Not to Fail Is to Determine to Succeed." A Glance at the Key Explains the Secret; the Letter Equivalent for Each Number Is Found in the Key Corner That Corresponds to the Arrangement of the Lines Appearing with Each Number

IWOUL DRATH ERBEA COULD BEIFI
LXFZI QCTAM PCSPT RFZIQ SPLOL
COULD NOTBE ANARE FORAC OULDB
RFZIQ GFASP TGTCP OFCTR FZIQS
EISAM AYBEW ITHAC HANCE OFTOU
PLBTH TVSPX LAMTR MTGRP FOAFZ
CHING PARIW OULDR ATHER BEAHA
RMLGN ETCLX FZIQ C TAMPC SPTMT
SBEEN THANA MIGHT HAVEB EENBY
BSPPG AMTGT HLNMA MTYPS PPGSV
FARFO RAMIG HTHAV EBEEN HASNE
OTCOF CTMLN MAMTY PSPPG MTBGP
VERBE ENBUT AHASW ASONC
YPCSP PGSZA TMTBX TBFGR
EANAR E
PTGTC P

The top line of letters is easily identified as a sequence of properly spelled words with the letters chopped up into groups of five. The translation forms this poem:

I would rather be a could-be,
If I could not be an are,
For a could-be is a may-be
With a chance of touching par.

I would rather be a has-been
Than a might-have-been by far,
For a might-have-been has
never been
But a has was once an are.

The key to this reversed alphabet is as follows. Plain text, a, b, c, d, e, f, g, h, i, j, k, l, m, n, o, p, q, r, s, t, u, v, w, x, y, z; cipher, t, s, r, q, p, o, n, m, l, k, j, i, h, g, f, e, d, c, b, a, z, y, x, w, v, u.

One way to tell the difference

Miss Jensen at One of the Multiple-Alphabet Tables; Different Combinations of Letters Produced on Strips under the Glass

between a transposition cipher and a substitution cipher is to count the occurrence of the vowels. If they constitute forty per cent or so of the text, the decipherer can be fairly sure that the cryptogram is of the transposition class. An aid in working the ciphers is what is known as the polyalphabet, a curious arrangement of little pasteboard strips between plates of glass. Each strip is printed with the alphabet and can be moved up and down to form combinations of letters crosswise to help reveal what characters have been substituted for the real ones.

The use of numbers instead of letters is a common way of writing in ciphers. Another sheet of lined paper was produced with a sequence of numbers. A glance at the key explains it.

The cipher: 11,21,25,12,
14 31,12,24,22,24 31,31,45,
34,11 35,11,24,14,11 25,14,
24,35,15 12,25,35,11,43 13,
14,41,44,45 13,35,12,45,11
31,11,14,35,13 25,11,43,13,14 41,41,13,25,35
15,12,25,25,12 41,26,26.

The key: 1 2 3 4 5 6
1 a e i j n r w
2 b f k o s x
3 c g l p t y
4 d h m q u v z

Solution: "Absence of occupation is not rest; a mind quite vacant is a mind distressed."

By Rotating the Different-Lettered Disks in This Device, Cipher Combinations Are Produced

A German Love Message in Flower Cipher: It Reads, "I Will Remain True to You Until Death"

The alternate vertical-transposition cipher is another simple form. As may be seen, it is made by putting the letters down vertically instead of horizontally, in the manner indicated in the key.

The cipher: TEAOO OTNAH ETB-
HD EEEGF IISRX ASTFR STOIM
PSWWT GEOAL EGNCR.

The key: THEFIRSTGR
EATGIFTWEC
ANBESTOWON
OTHERSISAG
OODEXAMPLE

The message is: "The first great gift we can bestow on others is a good example."

While the use of ciphers probably helped some of the writers of old keep out

Blocks, Beads, Chain Links and a Pillow-Top Design Arranged in Cipher, Showing That Common Objects May Represent Secrets

of prison, the cryptogram was also an aid in other ways. For instance, when the seventeenth-century lover wanted to "say it with flowers," he sometimes did so literally. The blossoms, prepared as a wreath, apparently were first laid in a row on a table, the different kinds occupying their proper places, either singly or in duplicate. The stems were then tied together with strings and then rolled up, making a circular bouquet, or wreath, like the one illustrated herewith, which is taken from Johannes Balthasar Frederici's "Cryptographia," published in Hamburg in 1685. The design is to be read in clockwise direction beginning at exactly twelve o'clock. The end of a word is indicated by a spray of lilies of the valley. The message reads, "Ich bleibe dir getreu, bis in den tod," which, translated, is, "I will remain true to you until death."

Volumes in Col. Fabyan's library show that many of our modern forms of secret writing are not new at all, but merely modifications of ciphers originated centuries ago. In 1588, for instance, Timothy Bright, "doctor of Phisike," printed one of the first known works on shorthand, and in 1669, Jeremiah Rich published the entire Book of Psalms in shorthand that closely resembles the characters used today. It is a tiny volume, little more than

two inches long, half an inch wide and less than that in thickness. Other books show that cipher principles were used in devising one of the first combination locks, similar to those we use today, and in one of the works of Trithemius, sometimes called the "Father of Ciphers," appear illustrations of various forms of the wheel cipher. On the spokes were different arrangements of the alphabet. A revolving guide attached to the center was also printed with the alphabet in normal order. By swinging it around, until the characters on it are opposite to those on the spokes, various

equivalents for the letters of the alphabet are obtained.

"Solving ciphers is a process of fitting and trying," said Col. Fabyan. "We worked eight months on one here before we finally got it. There can be only one correct solution so that this really helps matters, although the key is often hard to find. But the cipher expert learns how to find clues and recognize them when he does find them. For instance, the kind of words used give us help. If two or three stories were submitted to us from each of two authors and then another story, written by one of them, were sent in unsigned, we would be able to plot a curve, based on the vocabulary used, so that we could tell which of the two writers was the author of the unsigned manuscript.

"During the war, we had considerable trouble with messages not written in cipher at all, but just jumbles of letters or symbols. But some of the most perplexing cryptograms are simple after all. One that gave us considerable worry proved to be in route cipher. It may be formed in this way: Rule your paper in five columns and put a word in each column, as you write line by line. To make the cipher, simply take the words by columns instead of by lines. Telegrams are frequently sent in this manner."

Aurora, Ill.

View of Oil Fire and Barricades Erected to Keep It from Spreading; the Ditch Digger Is Seen in the Center; When Flames Became Too Hot, Operator Jumped Off, Allowing Ditcher to Run near Blaze

*Barber - Lawrence 630 W. Park Ave
Aurora, Ill.*

DITCH DIGGER AS FIRE FIGHTER HALTS OIL BLAZE 59

Operating close to the intense heat of a large oil fire in California, a motor-driven ditch digger did the work of scores of men in forming a trench barricade to halt the progress of the flames. It maintained a rate of 300 feet an hour, scooping out a ditch two and one-half feet deep and eighteen inches wide. Sheets of corrugated iron set on end and lapped over each other were placed in the trench and dirt thrown against them to hold them in place. At times, the flames came so close to the digger that the operator had to abandon the machine. He left

it in gear, and it kept an approximately straight line without guidance until he went back to it when the wind shifted and blew the heat the other way.

BEE SWARM ON CAR BUMPER AS SUBSTITUTE FOR TREE 58

Bumper That Proved Popular with Bees; Swarm Collected While Owner of Car Examines His Visitors

Following their queen, a swarm of some 12,000 bees alighted on the bumper of an automobile parked in a busy Ohio city street. Under similar circumstances, colonies have been known to collect on living persons and on other objects instead of a tree, for the members of the swarm always try to keep close to their queen.

Interior of the "Geology Special," Railroad Car Fitted as Classroom with Maps and Other Equipment

GEOLOGY SCHOOL ON WHEELS IN-CROSS-COUNTRY TOUR

To study geology and natural resources first hand, a group of teachers and students from Princeton university toured the country in a specially equipped railroad car. It was fitted with rolling wall maps and other classroom and library apparatus. The trip was arranged as part of a course and was featured by lectures.

REFRIGERATOR IN DAIRY TRUCK 1579 KEEPS MILK FRESH

Refrigerating plants on wheels have been introduced on a western dairy farm to keep milk and cream from spoiling during deliveries. They are auto trucks equipped with a brine tank from which circulation is afforded through a series of pipes by means of a pump. Each truck has a capacity of forty-six cases of milk and cream, besides a special can compartment for the larger quantities purchased by restaurants.

Big Brine Tank in This Motor Truck Keeps Milk Fresh on Long Hauls from Dairy Farm

anchor over the sea floor. For depths of over a mile, a special form of gripper is used. When it hooks the cable, it cuts it in two and holds one of the severed ends tightly. It is thus easy to lift the line, splice on a new section and connect it to the other end which is raised in similar fashion. Most breaks occur near the shores. The cable has a host of enemies. One of the worst is the teredo or sea worm that bores into ship bottoms and wharves. To protect the wires against these creatures, the shore ends are wound with a layer of brass tape between the insulation and the sheathing wires. In northern waters, icebergs occasionally grind the cables flat, exposing the conductors and sometimes cutting them off.

Once a shark bit into the line and its tooth was found in the covering. Another cable was tangled into loops and finally broken by a whale that died in trying to free itself. It was hauled up by the repair ship. The first

international cable from Dover to Calais was picked up by a fisherman who thought it was a new kind of eel.

CABLE REPAIRS SIMPLIFIED BY CHARTS

When a break occurs in an ocean cable, it is possible by electrical measurements and calculations from the shore to tell how far from either end the trouble lies. A ship is guided to the spot with the aid of charts on which are marked the position of the line, when it was laid, and any repairs that have been made since. An anchored buoy is set to indicate the point of departure, then the ship steams back and forth across the line, dragging a grapnel resembling a five-pronged

WOMAN RISKS LIFE ON CLIFFS FOR BIRDS' EGGS

82

Miss Kathleen Ordway and Samuel Long

Young Woman in Working Costume, Being Lowered over Cliff, and Helper Sorting Eggs

Suspended from a rope sling lowered over the top of a high cliff near a village in Yorkshire, England, a young woman works at the hazardous task of gathering the eggs of sea birds that nest among the rocks. To protect her head from falling stones, she wears a tin hat. Most of the eggs are sold for food and some to collectors.

the federal forest service. While showing no increase, mountain goats and mountain sheep are reported to be "holding their own," despite prevalent belief that these animals were threatened with extinction. In 1925, the big

game census, taken by nearly 1,000 forest rangers, also included estimates as to the number of beaver. The tabulation showed that some 114,000 of these animals live in the national forests exclusive of Alaska. A bureau of the department of agriculture states that there are some 30,000 antelope in the United States, of which 7,500 roam the federal forest areas. This is an increase over previous years, partly due to migration from lower open ranges. Public sentiment favors the preservation of

BIG-GAME ANIMALS INCREASING IN NATIONAL FORESTS

Largely due to the protection they are afforded, big-game animals, deer, bear, antelope and elk are increasing in numbers on the 158,000,000 acres of national forests, according to Will C. Barnes of

Assistant Forester

100

the black and brown bear so that these animals can now be hunted only during a limited season when their fur is of the best quality for the market. The 1925 census showed an increase of 2,000 bear in the national forests, although this larger number was believed partly due to the closer count made by the census takers. The grizzly still is scarce. In New Mexico there are said to be but twenty-two members of this species. In spite of the 22,000 deer lost by killing during the hoof-and-mouth epidemic in California, these animals showed a greater increase in that state than in any other. In the east, their numbers are growing also, more than 70,000 being found in the White Mountain national forest. Enforcement of game laws and the destruction of predatory animals have favored the deer.

CHEMIST DISTILLS OLD SHOES FOR MEDICINE AND PAINT

Valuable products have been obtained from old shoe leather by a graduate chemistry student of an eastern college. He is reported to have derived various medicinal substances, perfume, paint, ammonia, gelatin and narcotics after "distilling" worn-out shoes.

How Steel Is Aiding the Home Builder; Stilts under House on Bank of Hudson River

HOUSE BUILT ON HIGH STILTS HAS GARAGE IN BASEMENT

Chiefly because of high land values in New York city, lots that otherwise would not be utilized, have been adapted for dwellings so that houses on stilts and in holes along raised streets are not uncommon. An example is an artist's home overlooking the Hudson river. In this case, the lot was thirty to sixty feet below the level of the pavement, but a steel framework was constructed as a foundation and the cellar made into a roomy garage reached by a short ramp from the street. The house is heated with gas and has many other modern conveniences.

PATENTS SOUGHT IN ENGLAND BY SIX HUNDRED WOMEN

Among the 33,033 applications for patents filed during 1925 in Great Britain, 608 were from women. The total represented an increase of 1,633 over 1924. Receipts from patent fees were \$1,958,385 and total receipts, including those from designs and trade-marks, were \$2,380,220.

Old Grindstones Form Serviceable Stairway as Their Thickness Is Right for an Easy Step

OLD GRINDSTONES AS STAIRWAY STILL SHARPEN KNIVES

One answer to the question what becomes of old grindstones is found in an eastern park where eighty discarded sharpeners have been converted into a stairway up a steep embankment. They have not lost their whetting powers and still will put a keen edge on a pocketknife.

FOUNTAIN-PEN FILLING DEVICE REDUCES LOSS OF INK

Fitting in any ordinary ink bottle a bulb and cup attachment affords fountain-pen users a measured supply, prevents soiling the point and barrel, and reduces loss of ink by spilling or evaporation. Pressure on a small plunger fills the cup with sufficient ink for the pen, and if any is left over, it is automatically drawn back into the bottle when the plunger is released.

TRAPPERS ARE SAVED BY RADIO WHEN MAROONED IN ARCTIC

Radio messages sent from station WBZ saved hunters and trappers isolated in a lonely trading post at the extreme northern end of Hudson bay from starvation and possible death last winter. A supply ship with the season's provisions was crushed in the ice and a relief vessel was unable to penetrate to the post during the short Arctic summer. The trading company finally asked the station to broadcast word for a special courier to rush two sled loads of provisions to the isolated men. The call was picked up on a receiving set at Chesterfield inlet and the supplies sent as requested. Weeks later, the radio station received a telegram stating that its appeal for aid had been heard and the distressed hunters relieved.

ALCOHOL BLOWTORCH WORKS WITHOUT AIR PUMP

Burning alcohol as a fuel, a small pocket-size blowtorch employs the heat-generator system to furnish gas under pressure, doing away with the necessity of a pump. The torch consists of two small nickelplated tubes, one containing a large wick in the upper end, and the other provided with a needle-valve outlet curved over just above the wick. The valve is unscrewed and the tube filled with alcohol and enough alcohol poured in the other tube to thoroughly saturate the wick, which is then lighted, and the valve swung back in place above it. The heat from the lighted wick warms the valve and pipe, expanding the alcohol vapor and forcing it out through the tiny valve opening as a stream under pressure, the stream being ignited by the fire from the wick.

AIRPLANE TO CROSS OCEAN IN THIRTY-SIX HOURS?

Upper View of Model of Huge Airplane Showing Arrangement of Propellers, the Floats and Four Tail Ends, like a Series of Planes "Welded" into One

One of the obstacles to adapting the airplane to transatlantic traffic has been the difficulty of constructing a craft capable of carrying heavy loads without bending or collapsing in the center. This problem is believed to have been solved in an "unlimited-span plane," designed by a German expert. Essentially, the craft is a system of several individual planes beside one another and comprising six floats, four of which are full seaplane hulls. Ten 1,000-horsepower motors drive the ten propellers, which are expected to send the plane at full speed from the Azores to New York in about fifteen and one-half hours, and from Hamburg, Germany, in thirty-six. Even if several engines on one

side should break down, horizontal rudders are so adjusted as to warrant a possibility of a straight flight. Other parts of the ship are furnished in multiple for added safety. The interior arrangements include separate compartments for passengers, dining and smoking rooms, and quarters for officers, pilots and other members of the crew. The plane will carry 136 persons besides luggage and freight.

One of the features of the plan is a wide corridor at right angles to the direction of flight and between the passengers' quarters and the rest of the ship, to shut off the noise of the motors. A company has been started to construct the plane, patents on which have been obtained.

Side View of Model; the Craft Is to Be Constructed along Lines That Will Reduce Wind Resistance to a Minimum and Support Heavy Loads without Bending in Center

ters; These Are Scraped Off and
Replaced for Final Growth

Young Oysters Enlarged;
Thousands Can Lodge on
a Single Tree "Parking
Place"

Oyster trees have assumed an important place in conserving the diminishing supply of bivalves along the coast line of the United States. In extensive tests, the attempt has been to supply the newly born mollusks with the type of artificial home best suited to their growth. Under natural conditions the baby oyster moves around about two weeks and then takes up its

permanent abode. Its life ambition is to attach itself to a smooth, clean surface from which it does not have to move. The surface may be that of a submerged rock, an empty shell, or even a glass bottle discarded by the outer world. The supply of new-born is more abundant than the "parking" facilities. With a hundred or more of the creatures attached to a single

Patent
577
Brooklyn, N.Y.

shell, there is overcrowding with a resultant continual struggle for existence, in the course of which a large majority of the oysters are killed. To avoid this loss, the oyster tree has been developed as an ideal anchorage for the baby oyster. The tree is birch, submerged in the form of brush placed in tidal flats and sunk by means of weights. The numerous twigs and branches provide generous space. A single tree will accommodate a colony of thousands of tiny oysters. The tree-grown oysters are transplanted with little difficulty when they develop.

HALIBUT CHANGES SKIN COLOR TO MATCH LODGING PLACE 60

Besides its shifty eye and turnable spine, the halibut is distinctive because it can change color to match its surroundings. This mysterious power is apparently connected in some way with the eyesight, for when the optic nerve is severed, the change does not occur. Fishermen prevent this color change by laying the fish with its eyes down.

BARROW FOR BRICK AND TILE HAS ADJUSTABLE BALANCE

Constructed of electrically welded steel, a special wheelbarrow for brick and tile has an arrangement at the side whereby the balance can be adjusted for different loads, saving the user strain and preventing upsets. Besides this feature, the barrow has springs to ease the jars, and holes are punched in the bed and dash to permit riveting on old belting or wooden strips to prevent chipping.

Barrow Loaded and Accurately Balanced for Easy Pushing; the Springs Ease Jolts

Close View of Lamp in Center and Typical Uses

LAMP HELD BY VACUUM CUPS HAS MANY USES

Fastened to almost any non-porous surface by two vacuum cups, a shaded electric lamp can be used on the piano, for the radio set, the cash register and in many other places. It saves boring holes and making other alterations not always justified in installing a lamp temporarily. A clip is provided for attaching the light to cardboard or other materials to which the cups will not cling.

TESTS FOR MOLDING SAND TO AID FOUNDRY WORK 76

Through tests whereby foundrymen can tell whether they are using the right kind of molding sand in making castings, better products are anticipated as well as considerable saving in the industry. The material is examined with the aid of special apparatus to determine if it has sufficient strength, permeability and the right texture to prevent flaws and other imperfections in the castings. Costly mistakes can thus be avoided, and it is expected that foundrymen will be able to effect economies in the purchase of sand, an item that now calls for an expenditure of about \$8,000,000 a year.

Exterior View of Airplane Sleeper and Interior of Cabin with Its Reclining Chairs Tipped Back for Daytime Naps

AIRPLANE HAS SLEEPING CABIN FOR TRIPS BY NIGHT

The aerial sleeping car has appeared in Europe in a plane equipped with cabin seats that may be converted into berths for night travel. They tip back at a comfortable angle and may be used for resting during the day. The ship has two motors and is otherwise fitted for luxury and safety.

SUPER-POWER LINES LINK U. S. FROM ST. LOUIS TO BOSTON

Practically all of the northeastern section of the United States is now linked together by a system of high-tension electric-transmission lines. The last gap was closed when a twelve-mile stretch in Pennsylvania was completed. Improved service, greater savings and decrease of interruptions are seen as the outstanding ad-

vantages of this system. The Mississippi valley to Boston line, according to the Pennsylvania public-service information committee, will have a total power reserve of 1,200,000 horsepower. It does not permit the transmission of power generated in Missouri to New England, but enables neighboring electric concerns to shift their power loads.

GARDEN SHEARS CLIP AND HOLD 23 FLOWERS

Designed to hold the fruit, vegetable or flower after it is clipped, a new type of garden shears, recently invented, enables the user to reach objects beyond arm's length, using but one hand. When clipping fruit from a tree, or grapes from a vine, particularly if working from a ladder, the novel feature is expected to prove very useful. One side of the blade has an upturned ridge, a quarter of an inch high, and the other side a steel spring lever. As

Flower Clutched in Cutter and Inset Showing Ridge on Blade of Shears That Grips Stem

the fruit or flower is clipped, the stem is held firmly between the two, but the pressure adjusts itself so that even the stem of a delicate flower will not be injured.

Scene at a Busy Canadian Asbestos Mine, Where Nature's Own Fire-Resisting Material Is Dug and Shipped to All Parts of the World; the Entire Plant Covers More Than 100 Acres

DIGGING MINES TO FIGHT FIRES THE STORY OF ASBESTOS 54

Asbestos for fire protection, insulation, shingles, clothing, and any other purposes, is commonly seen but few persons stop to think that the material is of mineral nature and is mined out of the ground. One of the largest deposits and one that has supplied much of the asbestos used in the last twenty-five years is in the province of Quebec in Canada. The entire plant covers some 120 acres and the product is taken out with electrically and steam-operated apparatus. Several grades of the material are in commercial use, determining qualities being length and fineness of fiber, flexibility, strength and degree of heat resistance.

PLAN TO CASH CHECKS BY RADIO AS AID TO TOURISTS 124.

Promising great aid to travelers, a development of the radio-picture transmission process makes it possible for tourists to cash checks on their banks thousands

of miles away and to have the money in their pockets half an hour or so after signing them. A wireless photograph of the check is sent to the bank, which sends back the order for payment by radio. Likelihood of fraud is reduced by this method and persons are spared the inconvenience of carrying large sums with them.

HOLDER FOR WINDOW CARDS 1886 SAVES USING PINS

Milk, ice and other cards, as well as window decorations, are displayed without the use of nails, tacks or pins, with the aid of a holder that can be slipped over the bottom of the shade and has a spring clasp

to keep the card in place. It may also be suspended from the top of the lower shade.

House Profits Are Doubled by Making One Roulette Wheel Serve Two Board Layouts, Giving Twice as Many People the Chance to Risk Their Money on Systems That Look Good but Aren't

Here's How the Gambler Hides His Percentage So That, No Matter What the Result of the Game, the Winners Lose in the End

THERE is an old saying around the race tracks that you can beat a race, but you can't beat the races. The gambler who first made that discovery didn't add anything to the sum of human knowledge, for expert mathematicians had settled the question long before horse racing became a business, and settled it not only as regards the race-track gambler, but every other form of risking money.

There are runs of good luck and runs of bad luck, but the mathematical laws of chance demonstrate conclusively that, in the long run, the best the bettor can do is break about even—provided the odds are right and the game on the square. No commercial gambling proposition, however, from the nickel slot machine to a roulette wheel, gives the bettor an even break—bookmakers and slot machine and gambling-house owners insist on the "house percentage" to make sure that they will make money. Against such odds you can't win.

How many millions are bet—and lost—on horse races at American tracks in a year's time is a matter of conjecture, but more than a million and a half is regularly bet, at the track, on a single race, the Kentucky Derby. Bets made at the track, however, are only a small percentage of the bets made on any race. A crowd of 50,000 or 60,000 is a big turnout for any

Even an Honest Pair of Dice Doesn't Give the Crap Shooter a Fair Run for His Money, for the Odds Are Wrong

CAN'T WIN

race track, but in New York city alone it is estimated that more than 300,000 people regularly play the handbooks, while the total of handbook devotees in the country probably exceeds five millions.

If you add up the odds offered by the bookmaker on any given race, you can determine approximately how much he expects to take away from his customers or, as they are called by the "talent," the "suckers." Say there are nine horses entered in the race. Reduce the odds offered to fractions, add up, and the result, if it was an honest book, at fair odds (which no book can be, if the bookmaker is to earn his living) should total one. If the total is more than one, as it invariably is, the bookmaker is going to win, while, if it should be less than one, which it never is, the bookie would be in for a loss.

The shaving of the odds is only one small angle in the despoiling of the suckers who bet on races. Every bookmaker, tout and racing sheet frankly admits that the game is fixed; in fact, the more crooked they can make it appear, the more suckers they can get, through the curious twist of human nature which makes millions seek to profit through "inside knowledge" of the crookedness. The green-goods salesman, who takes a thousand or so for a lot of newspaper clippings supposed to contain many thousands in bills, has been profiting on this quirk of human nature for generations.

Every turf-tip sheet contains frequent reference to "sleepers," horses which are

The Sport of Kings Is America's Best Money Maker for Professional Gamblers, Because of the Ease with Which Odds May Be Shaved

"ripe for a killing," yet the bettors who accept the tip and bet on the horse ignore the fact that, if the tip is true, then the owner, trainer and jockey have been in a conspiracy to mulct the public. A sleeper is a horse that has been deliberately held back to make a poor showing in several races, so that eventually long odds will be quoted against it. When the time comes for the killing, the horse is entered in a race where it is pretty sure to win, and the owner's money is sent to other cities to be bet away from the track in small sums, so the bets will not pull down the odds. The process of having the horse lose repeatedly is called "qualifying" the animal, though really it is the betting public that is getting qualified.

One of the racing handbooks a couple of years ago, announcing a marvelous new way to beat the races by parlaying bets, attacked all other forms of gambling by

One of the Gorgeously Decorated Gambling Rooms in the World-Famous Casino at Monte Carlo, Where the House Percentage Pays All the Cost of Government for the Entire Principality

quoting the odds against the player. The figures in some cases were understated rather than overstated, but they included odds of five and a half to nineteen that the roulette player would lose; nearly two per cent against the man "fading" another in a crap game; more than two per cent against a faro player; "considerably" against the guesser in a coin-tossing match, and gave the added information that poker "eventually will break the player in a game where the house takes out a percentage."

Poker, as a matter of fact, can break a player in more ways than one, and in "friendly" games where there is no house deduction. The gambling-house practice, however, of deducting a certain sum from card games to pay expenses makes the result, so far as the players are concerned, no different from a group of friends who pool their money, draw to see who wins,

and let a stranger take out part of the pile for supervising the job.

There are probably more poker players in the United States than players of any other single card game, but out of the millions, comparatively few amateurs have any correct conception of the chances of filling any given hand. With a deck of fifty-two cards it is possible to form 2,598,960 different five-card hands, but 1,302,540 of these will have no poker value, that is, they will not even have as much as one small pair.

Most poker players know it is safer to draw to a straight open at both ends than to one open only at one end, or in the middle, and they likewise have observed that there are fewer "openers" out in a three or four-handed game than in a larger one, but have never stopped to apply the knowledge to their playing. As a matter of cold mathematics, if a big pair

The Rulers of Monte Carlo Abolished Taxes Because of the Vast Gambling Profits, and Likewise Barred Their Own Subjects from the Casino, Where Only Foreigners Are Permitted to Lose Money

is a good hand in a game of three persons, then small threes is the lowest hand on which it is safe to stay in a game of four or five, and big threes, or even better, in a game of six or seven players.

Out of the 2,598,960 five-card hands which can be formed from a poker deck, there are only forty possible straight flushes, four of which, of course, are the royal flushes. It is possible, however, to form 624 different sets of fours, and 3,744 full houses. Next there are 5,108 ways in which flushes can be made; 10,200 straights; 54,912 sets of threes; 123,552 hands which would contain two pairs, and, finally, 1,098,240 hands containing single pairs. There is no absolutely unbeatable hand in poker as now played, for the holder of a royal flush might possibly, though it is highly improbable, meet a similar hand, and halve the pot. In former days, however, before flushes were recognized,

there was one unbeatable hand—four aces—for the man who had them knew to a certainty that no one else could hold that same hand.

It is curious to note that more than one-half of all the five-card hands which can be formed from a poker deck do not even contain a small pair. Except for the general rule requiring a pair of jacks or better on which to open a pot, an ace-high hand would be a good one on which to stay, in the long run, for it would give an actual percentage in favor of the player.

Going back to horse racing, it is equally interesting that ten horses in a single race can finish in 3,628,800 different ways. An amusing story is told of a gambler in Australia who thought this curious piece of information offered an easy way to make money, so he began wagering on the question, but, unfortunately for him, met a man who was a bit smarter, and who

Berlin's Latest Gambling Game Is a Mechanical Race Track with Real Jockeys for "Atmosphere"; in the Center Is a Betting Machine in a London Club, and Below, Chicago Officials Are Wrecking Slot Machines

phrased the question, "In how many ways can ten horses be placed?" instead of in how many ways can they finish. Only three horses can be placed in a race, first, second and third, so there are only 720 combinations, there being 120 actual sets of threes in a ten-horse race, but each set can finish in six different ways.

Next to betting on horse-race tips, there probably has never been any gambling scheme which brought out as many "sure-thing" systems as roulette. The practice of doubling after each loss until the player wins is impractical for two reasons: the limits of the player's pocketbook and the limit fixed by the house, which commonly ranges from fifty cents or a dollar to \$100 to \$500. Even if the limit of an individual bet were removed, the player who had a run of bad luck would find the arithmetical progression affecting his purse. Say, the player sits down at the table with \$1,030 and starts wagering \$1, but meets a run of bad guesses. The first loss would be \$1, doubling the bet he would lose \$2 the next time, then \$4, \$8, \$16, and so on. If he loses his tenth bet of \$512, he will have paid out \$1,023 and, with only \$7 left, must

stop playing. It is probable that more people have spent more time trying to figure out a way to break the bank at roulette than have tried systems in any other one game. Roulette lends itself to system playing more than a card game, because the layout is so simple, and the whole thing is visible on the board, whereas the mathematical laws governing cards are more or less of a mystery.

Most of the roulette systems are attempts to get away from the huge losses attendant to attempting to double bets after each loss until one wins. Such systems, called martingales, can actually be worked, but have the drawback that they limit winnings to a very small sum, and even then aren't always proof against misfortune. Most of the systems are based on some one of the possible variations of divided plays. The player decides on an amount to be risked in each play, say \$6, and then divides it in three or four parts, such as one, two, two, and one dollar, setting the figures down in a row on a sheet of paper. He starts out by betting the first dollar, continuing until he succeeds in losing it,

The Mecca of Society Gambling, Until Recent Years, Has Been Monte Carlo, Perched on the Hillside above One of the Most Beautiful Bays on the Mediterranean; the Casino Is in the Center

and pocketing any winnings in the meantime. As soon as he loses a bet, he puts the amount down at the bottom of the column and then bets the sum of the top and bottom numbers, in this case \$2. If he wins, the two numbers are crossed out and the next top and bottom sum bet, while, if he loses, the \$2 loss is set down and the new sum, now \$3, is wagered. The play keeps on until all the figures in the column have been crossed off—and the player has won \$6. No matter what sum he fixes as the basis of play, the winnings in any one cycle of plays will be that amount, provided a long string of losses doesn't run him above the table limit before the cycle is completed.

Starting on a \$6 basis, twenty bad guesses would entail a loss of \$210, though the twentieth bet would be but \$20, so the system would be fairly successful in avoiding the table-limit rule, but after it is all played out, the final winning is but \$6.

The gambling house, of course, does not depend on the individual player's luck, or rather bad luck, to make its profit. That is all nicely taken care of by the zero, or, on many roulette wheels, the double zero, on which the house wins. With thirty-six numbers on the wheel, one or two for the house do not appear to be such a great percentage, particularly when the house explains that it is merely an exchange for the favor extended the player of varying his bets at will. Yet, as a matter of mathematics, it gives a very decided advantage to the house.

Any form of gambling game ever invented can be reduced, for examination of its mathematical chances, to the simplest of all gambles—tossing a coin. Over a long period of tossings it is practically certain that approximately one-half the results will be heads and the other half tails, so it is a fair fifty-fifty bet which will lead at the end, say, of one hundred tossings. But, after a run of ten or twenty consecutive heads or tails, it is still a fifty-fifty bet that the next toss will be either the one or the other, and you can take your choice. The fact that for ten or twenty consecutive times the toss has given the same result has not altered the mathematical fact that the next toss is still an even bet.

The failure to make allowance for that fact is one of the chief handicaps of an inexperienced bettor. When a player has had an unusual lucky run at craps there are always more people ready to bet against him, figuring his luck must change, and when one has had an unusually unlucky run, he is often prone to overplay to recoup, figuring again that luck must change. Over a long series of plays, running into the hundreds or thousands, there is justification for the idea of changing luck, since eventually the winnings and losses will average, more or less, provided the game is fair. But in the immediate game an unusual run of good luck or bad luck does not alter the fact that the next play still is one with equal chances of continuing or changing the run.

Duplicator in Service; It Is Rocked Back and Forth
like a Desk Blotter

PICTURES AND WRITING EASILY
COPIED FROM STENCILS

Letters, drawings and similar subjects are quickly reproduced in a hand-operated duplicator which carries the stencil on a curved ink pad, rocked back and forth to make the impression. A feature of the outfit is an automatic alinement apparatus which insures straight margins and registration of all the copy.

**CLOCK TO RUN FOR TEN YEARS
ON SINGLE BATTERY**

A black and white photograph of a tall, ornate clock. The clock has a large, round face with numbers 1 through 12. The hands are dark and the center has a decorative hub. The clock is housed in a tall, arched, glass-encased frame with a decorative base. The base appears to be made of metal or wood with ornate carvings. The clock is positioned on the left side of the page.

pieces are said to require no cleaning or lubricating, are precise, regardless of tem-

perature conditions, and are easily regulated. If stopped, they start going of their own accord.

LEGEND OF FRANKLIN AND KITE DOUBTED BY HISTORIAN

Benjamin Franklin may not have performed the experiment with the kite and the key, as popular biographies narrate, and he probably was not the first to test the principle of lightning rods, but these doubts in no way detract from his greatness as a scientist, according to Prof. Marcus W. Jernegan, of the University of Chicago. Franklin is believed to have first suggested determining the identity of lightning by means of a rod, but French investigators are thought to have made the proof. Pictures of Franklin flying a kite, while his small son stands by, are misleading. Prof. Jernegan holds, for at the time of the experiment, if made at all, the son was twenty-three years old. The historian deplores the fact that a suitable monument has not been erected in Franklin's memory.

SMOKER'S KIT ON AUTO DOOR SAVES ROOM ON DASH

Holding cigars, matches and a receptacle for ashes, a smoker's kit is fastened to the automobile door with rubber-covered supports. It is in an accessible position, does not interfere with opening or closing the door and has proved popular with many drivers who find the dashboard sufficiently filled with instruments without adding another.

OLD MASTER IS RESTORED BY THE USE OF X-RAYS

© Metropolitan Museum of Art

Portrait before Cleaning, the X-Ray Photograph Showing Overlying Colors and the Cradling Which Braces the Panel at the Back, and the Restored Painting; Note Larger Nose, Fuller Lips and Other Changes

How science can be combined with art and successfully applied in solving a difficult problem, where the identity of a painting by a master is at stake, is revealed in the restoration of a "Portrait of a Lady," by Frans Pourbus, which is now in the Metropolitan Museum of Art. Through the process of a thorough X-ray treatment, this picture has finally been identified as a genuine example of the master.

It appears that the woman's face had been overpainted with newer pigments and, to all appearances, was an old portrait with a new face. Experts examined the painting and discussed the problem, wondering whether an old face would be found underneath or whether the original had been lost beyond recall. According to Alan Burroughs, who conducted the experiments, the X-rays, broadly speaking, distinguish between old and new paint. The densities of the several pigments employed appear upon the X-ray film as well defined shadows, and from these the trained eye is able to determine facts not evident from examination of the surface.

The Metropolitan museum has reproduced three illustrations showing the different states of the painting before cleaning, a typical X-ray film taken from the portrait, and the portrait after it had

been cleaned and restored. The X-ray recorded a woman's face differing in several respects from that on the surface of the painting. Her nose was larger, her lips fuller, her eyes more slanting and her face more pointed. Whereas the face seen by the naked eye had the prettiness of an "ideal portrait" of recent times, the face revealed by the shadowgraph is that of a real person. Closer examination of the X-ray pictures showed that the painted surface beneath the repaint extended intact over the middle portion of the panel, the only damage being a chip out of the forehead and a crack running through the left side of the face. The crossbars over the entire panel are a shadow record of the cradling which braces the panel at the back. The cradling and repaints on the front hid from the eye the fact that the original panel had been inlaid in a panel larger by about one and one-half inches on each side, but the X-rays revealed the fact as can be observed in the darker band at the top and bottom of the shadowgraph. On the evidence of the X-ray, the museum had the panel cleaned of its overlying colors, with the result shown in the third reproduction.

FIREPROOF BASKET FOR WASTE IS FIXED TO OFFICE DESK

Desk Waste
Basket in Use

Attached to the desk where it is reached easily, a waste-paper basket consists of two metal sections. One is the container proper and tips outward when material is to be placed inside, or is easily taken out by a single upward and outward movement of emptying. It falls back inside the outer shell when released, preventing exposure of the contents. The basket is finished in a variety of colors to harmonize with the rest of the office equipment.

AROUND WORLD IN SINGLE DAY FEAT OF FUTURE?

When Linton Wells and Edward S. Evans lopped nearly a week from the previous world's record for circling the globe, conjectures began as to how long their time of twenty-eight days, fourteen hours and thirty-six minutes would stand. Evans predicts that in a few years, their record will be as humorous as Nelly Bly's, several hours more than seventy-two days. In fact, he points out, there are airplanes today fast enough to fly around in less than twenty-four hours, starting and returning to Point Barrow, Alaska, as the distance there is but 6,000 miles. The chief doubtful factor is that the craft are not yet equipped for a dependable flight of such long duration. Evans and Wells

covered more than 20,000 miles, using seven modes of travel which involved seventeen airplanes, three special trains, two liners, many small boats and autos, a jinrikisha and their feet. Two thirds of their plans went wrong but their own resourcefulness and the co-operation of others helped overcome these difficulties. The roughest flying encountered was between Pasco, Wash., and Boise, Idaho, where the air was so "bumpy" that sharp dips caused the carburetor to choke at times. The part of the journey covered by airplane totaled 8,500 miles.

AUTO TRUCK FOR ICING CARS CUTS SWITCHING COST

Switching refrigerator cars to the icing racks was found so expensive in a western city that an auto truck with elevator, raised by jacks, was devised to take the ice to the car. It carries sufficient ice for a whole car and the screws which lift the load are actuated by gears operated by the truck's motor.

Icing Freight Car from Truck; Cakes Are Hoisted on Elevator Run by the Motor

PONY EXPRESS TO PLANE TALE OF TRANSPORTATION 99.

Inauguration of mail and passenger service between Philadelphia and Washington by air recently recalled the rapid

trained treasure hunter with his portable testing outfits, automobiles and even airplanes. But gold mining has slumped. The world's annual production is some \$80,000,000 below what it was previous to the war. And digging for the precious

Three Stages in Transportation Illustrated at Sesquicentennial Exposition; the Horse Typifies Days of the Pony Express; Next, the Motor Car and Finally, the Speedy Airplane

transportation developments in this country. Three important stages in this growth were illustrated in a tableau at the Sesquicentennial exposition. It included a saddle horse, signifying the times of the pony express, an automobile and the first airplane for the new mail-carrying route between the two cities.

FINDING OF NEW GOLD FIELDS REVIVES MINING INDUSTRY 133

Recent discoveries of gold in northern Ontario, southern California and the republic of Panama, promise enrichment of the world's supply and stimulation of that branch of the mining industry, which suffered heavily during the war. Whether these finds will prove abundant, remains to be seen, but the general activity is welcomed as improved transportation facilities, opening of new districts to agriculture and other pursuits and the establishment of permanent commercial centers often follow in the wake of a gold rush. The old-time prospector with his crude equipment is disappearing before the technically

metal is not always a "gold mine" financially. In 1925, only seven companies in the United States paid dividends. Their total was about \$3,000,000. Exhaustion of deposits, high labor and equipment costs and the expense of opening new fields are some of the contributory causes to this condition. A bonus for new gold was sought in congress, although some operators were not in favor of the movement. But the bills failed to pass principally because of the sudden decline in prices due to deflation in 1920. Africa leads the world in gold production.

LEVER TO TIGHTEN TENNIS NET 103 AIDS ACCURATE GAME

Playing with the net too high or too low is a common fault in tennis, for accurate adjustment is bothersome and often difficult with the usual string fastenings. This detail is simplified by means of a lever attached to one of the posts. Raised or pressed down, as needed, to keep the net at the proper height, it remains in that position until released. The adjustment is quickly done.

Pressing the Lever Raises the Tennis Net to the Correct Height and Keeps It There

Mystery Shrouds Origin of Our Flag

WHO suggested the idea of incorporating a stripe and a star for each of the thirteen colonies in the first American flag remains a mystery on the eve of the 150th birthday of Old Glory, which will be celebrated June 14, next year.

The navy exhibit, however, shows that flags with thirteen stripes had been used on land and sea by the colonists more than a year and a half earlier, and that a flag

On December 3 of the same year the newly formed American navy gathered off Philadelphia and raised a flag with thirteen red and white stripes, but retaining the union of the British jack. On Jan. 1, 1776, six months before the Declaration of Independence, the same flag was unfurled over the Continental army at Cambridge. A year and a half later the main features of the two flags were combined

Flag of English East India Company, 1704; the Earlier Banner of This Concern Had More Stripes

Schooner "Lee" Flag of 1775; First Appearance of Stars; Note They Are Five-Pointed and Arranged in Parallel Rows

Grand Union Flag. Hoisted Dec. 3, 1775, over Newly Founded American Navy and Jan. 1, 1776, over Continental Army

Fifteen Stars and Fifteen Stripes; It Was This Style, the "Star Spangled Banner," That Inspired Francis Scott Key's Poem

Adopted June 14, 1777; Starry Union Borrowed from Schooner "Lee" Flag

Designed by Capt. S. C. Reid of U. S. Navy, the Flag of 1818; It Is Still in Use Though with More Stars

in the original Stars and Stripes—the union of the “Lee” flag replacing the British union.

The original idea of using stripes possibly goes back to the familiarity of the colonists with several flags employing the same device. The British East India company's flag of 1704 had thirteen red and white stripes, and was a common sight in the ports of the colonies, while the colonists who came over from Holland were accustomed to the flag of the United States of Netherlands, with its stripes of red, white and blue. In fact, the flag of New Netherlands, as New York was known while still a Dutch possession, had the same stripes and colors.

During 1775-1776, while the navy flew the grand union flag, with its thirteen stripes and the British union, at the stern, the ships also displayed a jack in the bows which featured thirteen red and white stripes crossed by an uncoiled rattlesnake, and, in the bottom white stripe, the legend, “Don't Tread on Me.”

From May 1, 1795, until 1818 the Stars and Stripes had fifteen stars and fifteen stripes, two having been added for new states. In 1818, the law establishing the present flag, designed by Captain S. C. Reid, U.S.N., was passed, providing that thereafter the stripes should be limited to thirteen for the original colonies and one star added for each new state.

REDUCE IRON AND STEEL WASTE BY ELECTRIC PROCESS

Nearly 20,000,000 tons of iron and steel, approximately twenty-five per cent of the yearly output, are now wasted annually in castaway articles, according to a British expert. In the opinion of an eastern engineer, much of this could be saved for re-use by electrolysis. He suggests the erection of large tanks, conveniently placed and containing an iron solvent, in which cans, old automobile bodies and other articles that now disfigure the countryside could be dumped and the iron reclaimed. Existing power plants could supply electricity for this purpose during hours of low consumption through the regular channels, he believes, and he further holds that electrolytic iron might be manufactured directly from the ore at plants near waterfalls where there are large deposits. An interesting phase of this problem is that uncontrolled electrolysis now causes corrosion and disintegration of piping and struc-

tural framework, but improved methods of construction and insulation will reduce losses from this cause to a great extent, the engineer believes.

VULCANIZING RUBBER TO METAL PREVENTS CORROSION

Demonstrating the Strength of Rubber “Weld” on Steel; Strip Supporting Men Is Inch Square

Promising great service to industry, a process for locking rubber to wood or metal has been developed by chemists. A specially compounded cementlike product is applied to the surface, then the rubber is vulcanized either by heat or air, the latter in the case of wood. Tests showed that a rubber strip, an inch square, and so “welded” to a steel beam, supported the weight of two men. Covering pontoons and seaplane floats, steel-tank cars for carrying corrosive acids, interior pipes and fittings are a few of the practical uses to which this process can be applied, engineers say. It is reported that the method is cheaper than the old way of first anchoring hard rubber layers to a corrugated metal surface.

RUINS OF INCA PALACE SHOW ANCIENT BUILDERS' SKILL

Little is known of the purpose for which the vast structures erected by the Incas were intended, but the ruins tell that these ancient builders were craftsmen of

Ruins of Inca Palace on Lake Titicaca Island: the Huge Structure Apparently Was Erected for Religious Purposes; Workmanship of a High Order Is Revealed in the Masonry

the highest order. An illustration of their work is found in an old sun palace on an island in Lake Titicaca, between Peru and Bolivia, 12,000 feet above sea level, the highest lake in the world to be traversed by steamers. The stones were so carefully cut and fitted that most of the walls withstood the hands of the invaders and have resisted the ravages of more than 400 years. Fragmentary evidence indicates that the "people of the sun" were also skilled as metal and pottery workers, good road builders, spoke at least two languages and had a highly developed labor and colonization system. They are believed to have settled near Lake Titicaca about 300 years before Pizarro arrived near the Peruvian coast in 1527.

ATLANTIC NEW YORK'S "FISHIN' HOLE"

More than 1,000,000 men enjoyed the sport of deep-sea fishing near New York city last season, according to reports. Special boats carry large groups of anglers to chartered locations. The craft, as a rule, are in charge of veteran fishermen experienced with tides, winds and weather.

and expert at taking their patrons to places where the principal catches, bass and blackfish, are likely to be found. Up-

holstered chairs, dining and lounging rooms are provided on many of the boats and some have complete tackle outfits for sale as well as bait of all kinds. They leave at intervals from midnight until late afternoon and, at weekends, are usually crowded to capacity.

BICYCLE-POLO GAME ON BEACH LATEST OUTDOOR SPORT 15

Bicycle polo proved a popular novelty at a California beach this summer. Special sticks of short length enabled players to strike the ball at close quarters and the hard sand made a good surface for the maneuvering of their "ponies."

DOUBLE DIAL IN HOTEL DOORS
INSURES GUEST PRIVACY

Dayton, Ohio

Inventory E. J. Morrison
and Russell Pryor.

Hotel Guest Setting the Dial from Inside Room and
Maid Reading the Indicator

Set in the hotel-room door and regulated from the inside, a little dial indicator shows the hour at which the occupant intends to leave. Besides preventing disturbance, the arrangement helps attendants in their work as they are informed when they may visit each room and delays are thus avoided.

WOMEN THE FASTER WORKERS EXPERIMENTS SHOW

122

Laboratory tests held at Johns Hopkins university show that women can do more work in a given time than men, but men display superior judgment. The tests involved substituting letters for symbols and were given to 542 women and as many men, college students in various part of the country and ranging in age from nineteen to thirty-nine. Judgment of the subjects was measured by requiring each to estimate, in advance, how much work could be

Seena Service

done in the time given, one minute and fifteen seconds for the first test, and one minute for the second. There was little difference in attention to directions and correctness of substitutions. The women worked faster, but were less accurate in estimating how much work they could do.

ONE DEATH IN MILLION MILES RECORD OF AIR TRAFFIC

149

In the forty-seven months preceding June 1, army flyers covered more than 1,000,000 miles with the loss of but one life. During that period, 1,197 passengers and 61,412 pounds of express were carried a total distance of 1,098,373 miles in 14,644 flying hours. Flights started totaled 691, of which 662 were completed. There were twenty-six crashes with but two accidents to personnel. These figures were compiled at the United States airway control office at Fairfield, Ohio, and refer to operations of government planes, which are now extensively used for carrying officers, messages and parcels of importance.

A Log Cabin Home of Today

LOG-CABIN days are being revived and revised, near Washington, D. C., where a trio of homes built of Canadian cedar and spruce logs are now occupied by contented owners who have used original plans, modern conveniences and forestry products of the pioneering era in the construction of the most unusual mansions built during recent years.

If ever you have lived for a few weeks or a month in one of those charming cedar cabins of northern Maine or southern Canada resorts, you will understand why Dr. S. S. Jaffee and Maj. C. G. Mettler happened to build permanent houses of logs close to the national capital. Both were delighted with the cabins in which they lived during winter and summer vacations spent in the woods. They tested out the timberland cottages during days when the thermometer recorded forty-five degrees below zero and when the mercury soared to peak of summer temperatures. They found neither flaws nor faults in the construction, durability or livability of the log houses.

Hence, for their own homes, one chose cedar and the other spruce in rough log form. In both instances, the amateur builders sought to purchase the raw logs of local dealers. The prices which the middlemen asked were prohibitive. The retail lumbermen wanted from \$8 to \$10

a piece for logs forty feet long and eight inches in diameter. So Dr. Jaffee arranged to buy his supply on the stump. The logs cost thirty cents each as growing trees, while cutting, skidding to the river, and formation into rafts cost fifty cents more. Rafting to the railroad and freight to Washington brought the total cost up to \$2 a log. Had they been dressed into lumber, there would have been an import duty to pay, but there is no charge on logs in the rough. With logs costing \$2 each and each log eight inches in diameter, a forty-foot wall, eight feet high, takes but \$24 worth of material, making an unusually cheap form of construction.

Nowadays, it is extremely difficult to find an American carpenter who is experienced in log-house construction. The Washingtonians solved the dilemma by importing workmen from northern Maine. These homespun carpenters charged only from \$4 to \$5 a piece daily and board. The cabin owners were their own architects and designers. The Mettler home more closely resembles those spacious, inviting and comfortable cottages of Maine and the New England woods and mountains. The Jaffee home is a real mansion made of Canadian cedar, most unusual in layout, arrangement and finish.

Most of the rooms in this picturesque

ten-room house are informal and so comfortable and inviting that your tendency is to tarry. To balance these, there are several formal rooms which lend dignity to the attractive home which is illuminated by electricity, heated by an oil-burning furnace, provided with every modern comfort and furnished luxuriously. The logs look as they did in the forest. The bark has not been removed. Cedar bark, unless diseased, remains in position indefinitely. The cracks between the logs were plugged with metal lath, cut to fit and nailed into place. Cement plaster, colored with burnt umber to resemble the cedar bark, was worked into position over the lath to fill all the chinks and crevices.

The house is roofed with cedar shingles which were milled expressly for that purpose. A thick layer of fireproofing and insulating material was laid as a protective blanket between the roof boards and the shingles. The tiny cracks around the

doors and windows were plugged with 300-pounds of oakum sealed into permanent position. Dr. Jaffee says the log mansion is so wind-tight and weather-worthy that during the normal Washington winter, windows have to be left open during ordinary weather for ventilation purposes and to moderate the natural temperature.

The mansion has really been built in the style of a house within a house, for the structure was originally built in two sections which, when completed, were combined. A commodious, high-ceiling living room, eighteen by thirty feet in floor dimensions, is the outstanding feature. All the other rooms are lathed and plastered as in the ordinary residence, but the ceiling of this lounge room and library shows the natural logs with roof boards and supports stained a natural cedar-bark color. A large stone-faced fireplace, which accommodates five-foot lengths of cordwood,

Individual Rustic Porches Open from Each Bedroom, Overlooking a Formal Garden, Above. While Below Are Two Views of the Six-Room Cottage, with a Garage on the Basement Floor

Even the Small Cottage over the Garage Has a Big Living Room, Featuring a Massive Stone Fireplace, While All the Doors, Like Those of the Main House, Were Handmade in Ancient Style

and a music alcove, in balcony form, on the level of the second floor with a rustic log railing are other features.

The main section of the house is sixty-five by thirty-four feet with six rooms on the ground floor and four upstairs. Instead of having a formal dining room, the Jaffees have provided a cozy dining alcove. Whenever they entertain guests, the table is laid in the large living room and library. An interesting feature of the first floor is a suite of rooms which is linked by a corridor with the rest of the house, but which can be shut apart as though entirely isolated. This suite consists of two bed-chambers and a connecting bath. Each chamber has a small private rustic porch which overlooks a charming garden.

The house is built on a strong and serviceable foundation of concrete and stone. It is important in such construction to protect the base logs against extreme weathering and fairly rapid deterioration. This is done by building a durable foundation of brick, masonry, tile, concrete or cement blocks. Dr. Jaffee imported only

two carloads of cedar logs to build his commodious home. He utilized the surplus material in building rustic fences and porches. His ornamental garden is most attractive as a result of the rustic fence which surrounds it. His cedar mansion is also unique in that the front and rear exposures are interchangeable by a few modifications. The residence was built at the center of a four-acre tract. It lies between two paved avenues. The front of the house is on one avenue grade, while the rear is attractively terraced and beautified, the street being about one story below the ground-floor elevation.

There were enough logs left over after the main house was completed to build a snug and slightly six-room cottage. Originally, its owner planned using the cabin for servants' quarters. People who passed that way, however, were so insistent that the cottage be rented that Dr. Jaffee finally assented.

The Mettler home is built of spruce logs which were "barked" before they were skidded and used for the house.

Barn Closed for Travel and Open; Sides Form Protecting Roofs for the Horses, Which Are Fed from Central Mangers

HORSE BARN ON FARM WAGON AIDS CONTRACTORS

Easily moved from job to job, a portable shelter barn that will accommodate eighteen horses and can be used for hauling hay and grain, has been devised for the special use of contractors who find caring for the teams an expensive and bothersome item. The structure is thirty-six feet long and twelve feet wide when closed. Hinged sections on the sides open out to form the shelters and double the width of the barn. Feed racks and end walls are securely built in.

RADIO IN WORLD TEST TO FIND IF CONTINENTS MOVE

Are the continents moving? Observers in more than twenty countries have united in a world-wide survey to find the answer to this question, which is regarded as having important connection with the origin of the great land areas and the changes that have taken place on the earth's surface. Solution of the riddle is being sought by making careful longitude calculations from appointed stations. This involves accurate time measurements. Radio signals sent from powerful broad-

casting centers will be recorded at the instant of reception at each observation point, and the measurements made in this survey will be compared with similar observations in 1931, it is planned. If evidence is found to support the theory that the continents move, the measurements and comparisons will be continued.

CEMENT SPRAYER MENDS FURNACE

Brick and tile-furnace settings are quickly coated for further use with a special cement which is applied by a small nozzle sprayer operated under 100 pounds of air or steam pressure. The distributor is controlled by a single valve, is light and compact and easily operated by one man. Carborundum is an essential part of the cement mixture, its heat-resisting qualities affording a durable surfacing. It may be applied to hot or cold settings.

Motor Car under Giant Plane Emphasizes the Huge Size of One of the Latest Sky Craft; Motors on Sides and at Front, Three in All, and Accommodations for Twenty Passengers Are Features

Johnson
**PLANE FOR TWENTY PERSONS
 HAS THREE ENGINES**

Accommodations for twenty passengers and their luggage are provided in a monster airplane launched in England. To reduce the hazards of journeys, it has three engines, to eliminate, as nearly as possible, the need of forced landings. Besides the passengers, a crew of several men is carried.

Medical School
**RECORD OF HEARTBEATS MADE
 TO HELP TREAT DISEASE**

Diagnosis of heart and lung diseases will be simplified and made more accurate, it is expected, through an instrument developed at the university of Pennsylvania. It combines some of the principles of the telephone, the phonograph and sound-amplifying apparatus that was used during the war to detect the presence of undersea craft. With it, records of murmurs in the chest, heartbeats and other sounds are made and these noises are reproduced so loudly that a whole classroom can hear

them, it is said. Should comparison be desired in a doubtful case, a record of a diseased condition could be played, showing what noises attend the malady, giving the examiners an accurate guide without the necessity of searching for another patient with such an affliction. The instrument eliminates most of the likelihood of error arising from the human element in using the stethoscope. It is planned to produce the equipment for physicians' as well as classroom and laboratory use.

1928
**TRANSPARENT MINNOW TRAP
 IS EASILY SET**

Transparent pyralin forms the sides of a minnow trap now on the market. It is reinforced with galvanized-iron bars and heavy wire,

easily carried and set, and is said to have proved practical and efficient.

BALTIC SHALE RICH IN OIL

Tests of oil-bearing rock found in the Baltic regions have shown that it contains seventy-five gallons to the ton, of which eighty to ninety per cent can be extracted. This is said to be about twice the possible recovery from American shale. Improved processes of separating the oil at a California plant have enabled the product to be marketed in competition with the well oil. It is being used as fuel for locomotives and for an ore extraction plant. After the shale is mined, it is crushed, heated in large steel retorts and the distilled oil drawn off in storage tanks. Gases are cleansed and cooled and more oil taken from them. The spent shale is made into fire and insulating brick.

SWIVEL-MOUNTED SHAPER-JOINTER WORKS WELL

Operated from a lighting socket, the one-quarter horsepower motor in a combination shaper and jointer is attached to the table by swivels so that the cutters can be set at any angle desired relative to the work. Smaller cutters can thus be used with a consequent saving in power and added safety. The outfit is portable and runs at high speed. It is said to perform well and to produce a high quality of work. It weighs less than nineteen pounds, including the motor.

SCORES OF FIGURES CONTAINED IN CARVED IVORY TUSK

One of the latest additions to the Victoria and Albert museum in London is an intricate carving from a single ivory tusk, split down the middle. It contains scores of tiny figures, grouped in a tableau to represent the "Assumption of the Virgin." The lifelike appearance of the forms is increased by the fact that they are cut in such full relief as to give the impression of almost complete detachment. It is believed probable that the work was executed by a Spanish or Italian craftsman of the eighteenth century.

Elaborate Carving from Split Ivory Tusk; Figures in Full Relief Emphasize Realistic Appearance

FLOATING HOTELS IN OCEAN TO SERVE AIR LINERS

Model Landing Platform, Ship in Pool and View of Anchors on Float

Hotels and landing fields on floats anchored in the Atlantic ocean have been suggested for stations along a proposed air line between Atlantic City, N. J., and Plymouth, England. To demonstrate the steadiness of the floats, a six-foot model and one of a steamer were placed in a pool. It was seen that the platform rocked but slightly while the ship tossed and rolled with the waves. The stations would be some 1,200 feet long, 600 feet wide and seventy feet above the surface of the water. Powerful searchlights would help guide the planes, which each would carry twenty-five passengers besides baggage.

COAL DUST FOR DIESEL ENGINE TESTED IN GERMANY

Successful experiments at running a Diesel engine on powdered coal are reported from Germany. One unit was operated several thousand hours under test. Coke slag and ash formations in the cylinders were removed by combustion gases and the problem of introducing the coal dust into the cylinders against high pressure was also solved. Special construction kept the powder from getting into the lubricating oil. Rudolf Diesel, the inventor of this type of engine, is said to have expected to use powdered coal as well as oil and other liquids for

fuel, but was unsuccessful, as he found it impossible to accomplish complete combustion of the coal in the short time available. In spite of the encouraging results of these last tests, engineers declare that coal will not be practical until a motor is designed that will take any kind rather than the prepared fuel used in these experiments.

LENS FOR BIG AERIAL CAMERA WEIGHS FORTY-FIVE POUNDS

American lens makers demonstrated their skill in preparing the huge "eye" for a camera constructed for the U. S. air service. It weighs forty-five pounds and is said to be the largest camera lens ever ground in this country. With the mounting, it measures nine by nine inches and has a focal length of thirty-six inches. It will take pictures of entire cities at one exposure.

Lens of Huge Camera Compared with Small Pocket Kodak to Illustrate Size

with corresponding improvement in fuel, oil and tire economy.

The trend toward smaller cars began several years ago in Europe. Over there a 2,500-pounder is now popularly considered a large car, and it is, compared with the average European automobile, for many foreign cars weigh only 1,000 to 1,500 pounds and some

UNQUESTIONABLY the most interesting thing about the automobile is its ever-changing features. It is never quite the same two years in succession. It is continually exhibiting something new to interest motor-car owners..

In just the past two or three years such important improvements as four-wheel brakes, balloon tires, air cleaners, oil filters, lacquer finish and all-steel bodies have been added. What next?

The answer to this question is likely to disclose the most radical development since the automobile was first conceived, and the answer is this: Smaller and lighter cars are going to be manufactured. These cars will give thirty to fifty miles on a gallon of gasoline and will be capable of doing almost anything larger cars can do. Already one American manufacturer has announced such an automobile, and it is understood that between now and the first of the year there will be several others.

This statement alone is of interest, but in addition there are indications that this small-car development will eventually influence big-car construction with the result that the automobile of the future will be smaller and more economical, yet just as comfortable and capable as the common run of cars built today. In short, it appears that automobiles of all capacities will be scaled down in size and weight,

weigh as little as 600 pounds, while the smallest closed bodies weigh as little as 120 pounds. As a rule, four-cylinder engines are used with piston displacements ranging from forty to about 100 cubic inches, whereas, in comparison, the Ford is a monster with a displacement of 176 cubic inches. Maximum speeds of these cars range from forty to eighty miles an hour, fuel economy from thirty to sixty miles per gallon, and passenger capacity

varies from two to five persons.

The development of attractive, roomy, well-built, powerful, high-efficiency

One of the Smallest Cars Ever Made; It Weighs Only Six Hundred Pounds and Has an Air-Cooled Motor

ciency automobiles in the 100-inch wheel-base class is rather certain to influence the construction of cars of every size and price. And, in passing, it should be pointed out that there seems to be little connection between size and performance. A small car can be built to ride almost as well as a large car, and its top speed, its road-holding ability, and other features, may come close to equaling those of the large car. In fact, the very large ones seem to have as many disadvantages as very small cars. The big car is, of course, difficult to handle in traffic and it also may be clumsy on the road. Usually it does not act as well on turns as smaller cars. A rough proof of this is that racing cars are usually built with wheelbases of about 100 inches.

All of which leads up to the view that there is no particular sense in building automobiles bigger than they need be. This view was recently expressed by no less an authority than Thomas J. Litle, president of the Society of Automotive Engineers, who said that there was no good reason for building a two or three-ton car to carry two passengers or more; that present designs were crude and

should be discarded; that because a car was high-priced was no reason why it should be overweight.

In order to give a more detailed picture of what Mr. Litle was driving at, as well as to give an idea of what the future may bring forth, it is necessary to look at the modern racing car. The speedway has always been a testing laboratory for the refinement of features which eventually were placed on stock passenger cars. Racing construction in the past has always been several years ahead of passenger-car construction, and if this has held true in the past, there is some reason for believing it will be true for the future also, and that racing-car features of today should be the passenger-car features of tomorrow.

It is significant that the size of racing-car engines has grown steadily smaller. In the early years, racing engines had piston displacements of 1,200 cubic inches or more and developed about 200 horsepower. For the past three years the displacement has been 122 cubic inches, while, this year, the limit was cut to ninety-one cubic inches. Yet racing-car speeds have gone steadily upward, although weight has been reduced but slightly. Time was when a

American Light-Car Engine of Only 131 Inches' Displacement, Which Gives Speeds of over Sixty Miles

1,200-inch engine gave 200 horsepower. Last year racing engines of one-tenth this were yielding the same horsepower, while this year the ninety-one-cubic-inch engines are delivering 150 horsepower.

How did this happen? How is it possible for horsepower to go up as engine size goes down? The answer is better engine design. As engine size has gone down engine speed has gone up. The big engines of bygone days had a maxi-

How a Better Mixture Is Obtained by Using Square Instead of Rounded Gas Passages

mum speed of about 1,200 revolutions per minute whereas the racing engines in use today run at 7,000 revolutions. To run even a small engine at such enormous speed means that pistons, cylinders, connecting rods, crankshaft and all other parts must be carefully made of the very finest material. It means also that they must be most precisely balanced, bearings nicely calculated to stand the strain and lubrication must be unfailling.

Illustrating Combustion in Cylinders, from Left to Right, Too Lean, Correct Mixture and Too Rich

Probably the greatest problem in the modern racing engine is the valves. At 7,000 revolutions, each valve opens and closes fifty-eight times per second. The wonder is that they stand up at all at such terrific speed, and it is difficult in a long race. Each cylinder also has to receive fifty-eight charges of fuel each second. Experience has shown that the suction of the piston in itself is insufficient to adequately fill the cylinders in the fraction of time available. For such speedy work it is necessary to assist piston suction by adding a supercharger, which is nothing more nor less than a pump in the intake manifold that helps force in more mixture than the pistons can draw in.

Because of valve breakages at these excessive speeds several racing-car engine builders are experimenting with the two-cycle system. One car with such an engine was started in the last Indianapolis race. While it did not have the speed of the more highly developed four-cycle cars it gave promise of interesting results when the design has been more completely developed. For those who are not familiar with the two-cycle engine it may be well to explain the difference between the two-stroke cycle and the four-stroke cycle. In the latter, the piston makes four strokes for each explosion, two up and two down, namely, suction, compression, explosion, exhaust. In the two-stroke, the piston makes two strokes, one up and one down, for each explosion. The suction and exhaust strokes are eliminated. In its simplest form, the engine has no valves but the piston uncovers two ports or openings in the cylinder walls at the bottom of its stroke. One is the intake port and the other is the exhaust port. When the exhaust

Rubber Block Which Replaces Spring Shackles and Bolts, Needs No Oiling

port is uncovered, some of the exhaust shoots into it. An instant later the intake port is uncovered, and the mixture is forced into the cylinder, the incoming charge helping to force out the remaining exhaust gas.

Not only is the two-cycle engine appealing for racing because of the elimination of poppet valves, but also because it gives twice as many power strokes as the four-

Miller

Courtesy of Motor Age

One of the Pigmy Front-Wheel-Drive Racers, Capable of Speeds of More Than One Hundred Miles an Hour; the "Blower" or Supercharger Is Shown at the Lower Right and the Motor Block Above

cycle engine, a feature that becomes increasingly important as engine size decreases. It is therefore of especial interest to learn that a well-known Italian automobile manufacturer has already built a two-cycle ninety-one-cubic-inch engine which has developed a speed of 11,000 revolutions, and yet even this does not seem to be the limit of engine speed.

In view of this, it would not be surprising if the ninety-one-cubic-inch four-cycle engines of the future developed double the speed and double the power of present engines, or 300 horsepower instead of 150. Then, if two-cycle engines are brought to the same standard of efficiency, this power will be doubled again, which means that 600 horsepower will be obtained from a ninety-one-inch engine.

If this happens, how large an engine would be required to develop thirty horse-

power? Such an engine would be one-twentieth the ninety-one-cubic-inch engine or four and a half cubic inches—about as big as a wine glass. This possibility is far in the future. It may never happen, yet the thought is interesting.

But what of the immediate future? Since a ninety-one-cubic-inch engine will yield 150 horsepower, is it not an interesting possibility for a high-grade, low-weight passenger car?

And if such an engine is suitable for a high-priced small car, why would not a little smaller, slightly slower-speed engine of similar design be ideal for a slightly smaller medium-priced car?

With such small engines, it would be quite feasible to build cars with bodies amply roomy for five passengers and still not have a wheelbase in excess of 120 inches. Weight, of course, would be

One of Several Types of Air Cleaners Which Cut Down Carbon Trouble and Save Wear on the Engine

trimmed from all parts of body and chassis as well as from the engine. The answer to these

questions, perhaps, has already been furnished by Europe. Over there are found stock cars with ninety-one-cubic-inch engines with top speeds of eighty miles.

There is some evidence that lighter cars along these lines will be developed in all price classes here in America and that these cars will be vastly more economical of fuel, oil and tires and will have even more ability than present cars.

Another important step in the offing is the elimination of the gear shift lever. An engine recently developed in England, and now in production, does this. The shaft is always engaged, but when the engine is idling, turning over at slow speed, no power is transmitted, and the car stands still. Step on the accelerator, and the engine speeds up and begins to transmit power, slowly at first, so that the car starts without a jerk. Take your foot off the gas, and the car slows up and stops again. When you come to a hill, the engine automatically speeds up and delivers more power, and when you top the rise and start down the incline it slows down again.

An equally important trend in this country is the movement toward better and more lasting bodies. Many closed car bodies wear out long before the engine, has outlived its usefulness. The reason is the constant strain to which they are subjected. One engineer has proposed a pivoted type of construction that will eliminate the body strains. Adjustable seats, back rests that slide up and down with the movement of the passenger's body, easier-operating clutches, and possibly compressed-air or other form of power brakes, all promise more comfort to the driver and passengers.

An English Light Car Capable of High Sustained Speed with a Small Motor, Which Is Notable for Its Great Economy of Operation

THE MYSTERY OF LOST COMETS

Ensen's comet, discovered in 1925 and slated to return in the northern heavens early this year, disappointed the astronomers. It failed to appear, so the observers added it to the list of fiery travelers, that, like some ships of the sea, have been mysteriously swallowed up and never seen again. Biela's comet, found in 1826, kept a regular schedule for several years, then suddenly broke in two. The parts were last observed in 1852, but twenty years later, when the earth was crossing the path of the comet, a remarkable shower of shooting stars came from that part of the heavens which would have been occupied by the comet had it been visible. After Lexell's comet was discovered, in 1770, predictions were made that it would return every five years, but it was never seen again. It was the same with the comet found by Peters, in 1846, Stephens' comet in 1867, and DeVico's, which should have been visible in 1921 after an absence of seventy-five years, but could not be found. Two main reasons are given for these disappearances. The comets literally waste away or are thrown out of their normal course when they pass too near some great planet.

GOLDFISH AID ELECTRIC PLANT BY DEVOURING MOSS

Now the goldfish enters the ranks of man's dumb servants. Spray ponds where water is cooled at small transforming stations along electric transmission lines, are being kept free from clogging moss by stocking them with the sparkling fish. An interesting balance in numbers and food was maintained at one pond. When the moss was exhausted, some of the goldfish turned cannibals and devoured the others. The survivors kept the vegetable growth from accumulating around the nozzles.

Instructing a Group of Happy Players in the Latest Ship Sport, Deck Archery; It Is Recommended as Means of Avoiding Seasickness

ARCHERY GAME ON SHIPBOARD LATEST DECK SPORT

Keeping the mind pleasantly occupied is recommended as a means of warding off seasickness, and one of the sports offered for this purpose is deck archery. The equipment is essentially like that used on land. A canvas backstop catches stray arrows. The sport is not an easy one even on land, and the movements of the ship afford additional opportunity for the archers to show their skill.

STEEL BRIDGING FOR JOISTS SAVES TIME IN BUILDING

In place of wooden units, steel bridging between joists is said to save time in building, requires about half the

nailing and cannot split or crack. Furthermore, better floors are assured as the steel will not warp, and additional safety is secured as the bridging is fire-proof. The mem-

bers are ready for installation, saving the time and expense of cutting and fitting.

MICE DANCE IN MODEL "HOTEL" TO AMUSE SPECTATORS

Glass-Walled Model Hotel in Which Dancing Mice Caper for the Entertainment of Shoppers

To exhibit a collection of fifty Chinese dancing mice, a San Francisco man constructed a model hotel with a glass front and glass partitions between the rooms. Holes were cut through these walls. At intervals, the mice dash in circles in and out of the openings, causing great amusement.

WHY GAY COLORS ARE WORN BY JOCKEYS

Few frequenters of the race tracks, watching the winning of a Derby, know that the brightly colored silk shirts and caps that the jockeys wear probably had their origin nearly 400 years ago and that the use of different colors is the result of a close race run in 1727 which the judges had difficulty in deciding as all three jockeys "rid in yaller." In 1530, King Henry VIII of England listed expenses of making doublets "for the running boys of the stabul," and for "ryding cappes of blac satin," an item paid to the "mylanner" (mil-

liner). From this record, it appears that the king was the first to dress his jockeys in colors. In 1762, thirty-five years after the confusing race in which the three yellow-clad riders participated, the Jockey club passed a resolution compelling owners to adopt jackets and caps of a particular color for their separate use. The custom has persisted since that date. The duke of Devonshire's straw-colored jacket and cap, selected then and still in use, have figured as winners in many a race up to the present time. Nowadays, if an owner runs a horse under colors other than those registered in his name, he must make a declaration of his plan to the clerk of the course before the race starts, otherwise he is subjected to a heavy fine.

DERRICK AT FILLING STATION REPRESENTS OIL WELL

Patrons of a gasoline-filling station in an Ohio town may form the impression that the fuel is being pumped directly from the ground when they stop for a supply.

The illusion is effected by means of a replica of an oil-well derrick and walking-beam pump. This goes up and down as the gasoline is being forced from the storage tank into the glass dispensers in front of the station. The office is also built to represent a shack such as are commonly seen in the oil fields.

An Innovation in Filling-Station Architecture; the Derrick's Beam Pump Actually Runs When Cars Are Filled

Notice how the derrick
moves in and out of the ground.

Looking Down on the Political Heart of America from the Dirigible "Los Angeles," Part of the Ship Showing in the Upper Left Corner; Low Altitude and Slow Speed Aided the Photographer

AERIAL VIEWS OF WASHINGTON SHOW CAPITOL'S POSITION

Keeping in mind the relative location of important government buildings in Washington has been simplified for the visitor by means of aerial photographs. Several taken by the navy department recently from the dirigible "Los Angeles" are considered especially informative, as the craft was not at a great altitude, and consequently details and landmarks in the pictures are more easily identified.

VIKINGS VISITED THE FAR WEST ROCK INSCRIPTIONS SHOW 32

That the Norsemen had been in America long before Columbus is further indicated by a story of a battle between Vikings and Indians, inscribed on a boulder near Spokane, Wash. The inscriptions were believed to have been the work of Indians, but recently, Prof. Oluf Opsjon, an authority on Norse history, translated them and declared them to be records in runic characters of a fierce struggle in which a party of twelve Norsemen had escaped from the red men after an equal number

of Viking warriors had been killed and six of the seven women captured. The survivors returned later and wrote the story. Many of the characters were covered with moss, and its removal is expected to reveal further inscriptions. The scientist places the incident at about 1010 A.D.

ELECTRIC CHURN FITS ON WALL PUMPS WATER AND TIRES 1599

Operated by electricity from a lighting socket, a churn that fits against the wall is out of the way when not in use, and is said to consume about one-tenth of the current used by an electric iron.

It may also be used for pumping water, for inflating tires, turning an ice-cream freezer, and for various other similar purposes.

The length of the stroke may be easily regulated without moving the churn.

Launched with a Pat from a Monster Powder Puff;
Scene at a Yacht Christening

POWDER PUFF FOR CHRISTENING REPLACES CHAMPAGNE

Boat-christening procedure was varied somewhat at an eastern launching, when the young woman sponsor patted a huge powder puff against the nose of a trim little yacht instead of breaking the formerly customary bottle of champagne. The novel departure was considered appropriate in preparation for a journey and several members of the boat club had voted against using wine.

HINGED "SKIRT" ON STREET CAR DEADENS NOISE

Constructed of light-gauge metal and lined with an insulating lumber, a twelve-inch "skirt" around the substructure of a street car in use in a Michigan city, is said to absorb much of the noise and also improves the appearance of the car, as it hides most of the trucks and wheels. It is on hinges so that it can be raised for

inspections. Besides this feature, the car has an insulated and rubber-covered floor and in the wheels are rubber pads which help deaden the noise.

METER FOR AUTO COMPRESSION 2202 SHOWS CAUSE OF LOSS

Loss of compression and the cause, whether due to cylinder trouble or valve leakage, are determined with a simple meter without dismantling the motor. The results are obtained by passing compressed air through the instrument and then on into the cylinder being tested and out through any leaks that may exist. The percentage of such loss is accurately registered on a gauge, enabling the tester to determine the size of the leak and to identify a scored, warped or otherwise faulty cylinder. To make examination for valve leakage, the procedure is practically the same, except that the top of the piston is sealed with heavy cylinder oil. Subtracting the amount of valve loss, if such is shown, from the total loss revealed by the first test, leaves the amount of piston leakage. The meter is simple to use, is easily attached to the cylinders after the spark plugs have been removed and has a signal whistle to indicate when the piston is beginning its compression stroke, the proper position for making the test.

Behind the Scenes at the Zoo

Chimpanzee Rates Highest in Intelligence, While Elephant and Domestic Horse Are Tied for Second Place, with Lion Third

By FLOYD TAYLOR

IN one of the thick albums of Edwin R. Sanborn, official photographer, there is a fine picture of the deadliest snake in the New York Zoological society's collection, the jararaca-cu.

To get this photograph Mr. Sanborn spent an hour alone with the infuriated snake. The jararaca-cu is not accustomed to photography, and it is worth any man's life to go near it carelessly. It can strike two-thirds of its own length and its victims have only from ten minutes to half an hour to live unless anti-venom serum can be secured. Twice Mr. Sanborn was within range of the snake, within about three feet of it, when it hurled itself toward him and buried its fangs in the camera cloth as he stepped aside. Mr. Sanborn paid little attention to the snake's hisses. For twenty-five years he has been photographing everything from elephants to little ground hogs, and he has taken about 5,000 pictures of birds, animals and

reptiles, including those of the most deadly snakes and the most ferocious beasts.

An hour passed while the jararaca-cu rippled on the floor. Occasionally Mr. Sanborn clicked the shutter of the camera and then changed the plates. Finally he was satisfied, and the snake was put back in its cage while the photographer developed his pictures.

John Toomey, head keeper, says that the only safe assignment in the zoo is caring for the lions, tigers and other jungle cats. The cages of these are divided in two parts and, while a keeper works in one, the cat is in the other.

"There are marks on several of our keepers," he said, "which prove their work is dangerous, with more risk in it than might be supposed. Animals that have been quiet for years will make a sudden attack and the keeper is unprepared.

"In certain months the animals are more dangerous than in others. Elks are likely

to be troublesome from August to February, their mating season, when their antlers are tough and pointed, and they resent the intrusion of the keepers. I have seen an elk plunge against the gates with enough force to knock them from their hinges. The buffaloes must be watched carefully. Their method of attack is peculiar. With their great power and surprising speed, they roll men along the ground with their heads, bucking viciously. I recall at least two instances of

The Keeper Has to Climb High to Get the Giraffe to Hold Up Its Head While the Photographer, in the Paddock, Snaps the Picture; at Right, Two Tons of Elephant Is Being Posed

keepers who have been savagely mauled by buffaloes. To do any work in a bear's cage, it is necessary to drive the bear up on the rocks in the back of the cage. One of our men, while in a cage, turned to find a gigantic brown bear leaping on him. He threw up his hands and attempted to dodge past the bear. He got by, but his hand was badly cut. Gangrene set in, and it had to be amputated.

"After the animals have been in the zoo for a time, they are less dangerous than when they first arrive. When they become used to their surroundings and find the keepers have no intention of harming them, they can be approached in comparative safety."

The biggest eater in the zoo is the African elephant, "Khartoun." It weighs 10,000 pounds and every day consumes 125 to 150 pounds of hay, thirty pounds of carrots or beets, fifteen loaves of bread, and drinks ten to fifteen gallons of water. "Alice," its companion and rival for eating honors, drinks water directly from the hose and thus conceals her gallon capacity. The hippopotamus manages to live and prosper on a ration of 100 pounds of hay, ten loaves of bread and ten heads of cabbage or a similar quantity of beets.

The menu for the zoo includes 120 varieties of food, and there are consumed during the year 100,000 pounds of meat, 75,000 pounds of bread, 35,000 pounds of fish, 2,000 dozen eggs, 3,000 quarts of fresh milk, 1,500 quarts of condensed milk, 15,000 bunches of bananas and seventy cases of oranges. The monkeys start the day with oranges, bananas and apples and, for dinner, drink a punch of milk and eggs. The eagle and the vulture get a pound of

meat a day a piece, and the ostrich has half a peck of lettuce or crushed oats.

The python, which is twenty-two feet six inches long, supports its length on a dinner once a month of thirty to fifty pounds of mice, rats, chicken and guinea pig. A meal for it costs \$8. The sea lion thrives on seven pounds of fish a day.

Pythons are cheap; they can be obtained for from \$300 to \$400 a piece. Macaws bring from \$300 to \$1,200. "Khartoun," who was bought for \$1,200 when it was very young, is worth \$25,000 now

Asking a Ton of Hippo to Open Its Mouth, So the Photographer Can Get a Nice Picture of Its Teeth, Is Only One of the Jobs a Keeper around the Zoo Is Called On to Perform; in the Circle, a Russian Brown Bear Is Being Persuaded to Stand Up Nicely on Its Hind Legs and Act Friendly While the Cameraman Clicks the Shutter; from Constant Handling Many of the Wild Animals Become Quite Tame

The Dentist Who Undertakes to Cure an Elephant's Toothache, Acquired from Eating Too Much Candy and Peanuts, Literally Has His Hands Full While He Fills a Pachyderm-Size Tooth; Above Is a Mule-Deer Fawn Being Raised on a Bottle at the Bronx Zoo in New York; Keepers Must Know Many Things, Including How to Be a Mother to Young Animals

that it is full-grown. Ostriches cost from \$25 to \$500 a pair, eagles and vultures from \$10 to \$200 a piece; birds of paradise from \$200 to \$1,000, an Indian rhinoceros \$8,000, and pygmy hippopotamuses about \$5,000.

Dr. William T. Hornaday, former director and general curator of the zoo, says the chimpanzee is the most intelligent animal in his care. In the scale of intelligence, he gave the chimpanzee 925 points, the Indian elephant 850, the domestic horse 850, the lion 725 and the rhinoceros 175. The zoo's smallest mammal is from Egypt. It is the jumping rat, or jerboa, which looks like a miniature kangaroo. The smallest bird is the strawberry finch and the rarest mammal the giant tapir, which is only a third grown and weighs 800 pounds. It was captured in Panama.

One of the most difficult tasks in the zoo is that of Dr. W. Reid Blair, who cares for sick and injured animals. He often has to treat monkeys for tuberculosis and sea lions, which were brought to the zoo from the frigid waters of the Pacific, for pneumonia. The tiger sometimes gets a toothache and the elephant develops enor-

mous corns, which must be trimmed. The delicate bones of the deer and antelope are snapped as they race in their fields and must be set as carefully as the fracture of a man's leg.

The more hardy animals at the zoo live in the open all the year round, and herds, like those of the buffalo and wild horse, have large pastures. In the winter, the tropical birds live in a steam-heated house.

Mr. Hornaday says most of the animals are as happy as a man, who had struggled for years to make both ends meet, would be if he was suddenly installed in a fine hotel where someone else paid his bills.

"Care given to the animals," he said, "extends the life of many of them far beyond what they would expect in the merciless jungle. One of the leopards lived to the ripe old age of twenty-one. It had not a tooth in its head at the last, to be sure, but it was kept alive all the same with plenty of chopped beef.

"Then there is our polar bear, 'Silver King,' now twenty-three years old. It is hardly conceivable that it could have lived so long had it been left to face its enemies and the rigor of the Arctic winters."

PLANES HUNT BUGS TO CURB PLANT DISEASE ²⁵

Bug hunting by airplane, to help rid the country of plant pests, such as rust, enemy of wheat crops, and other diseases is proving effective. On a wing of the plane is a little box containing glass slides covered with vaseline. As the ship rushes by, dust particles are collected on the surfaces and after landing, the hunters, who are trained scientists, seek through the "catch" for the little spores, the parasites that lodge upon wheat stalks and take the moisture and soil food that the grain needs. One of the objects of the hunting is to find out how far the spores travel and where they start. Planes are up on suitable days all the way from Texas to Minnesota. Already the hunters have found that the barberry bush is a prolific breeding place for rust. It is said that one bush in Indiana cost the farmers within a radius of fifteen miles a loss in crops of \$12,500 a year. The spores are only one five-thousandth of an inch in diameter, travel at high altitudes and with the speed of the wind. This season, the aerial bug seekers were anxious to find out if the rust which had appeared in Mexico and in Texas had traveled as far north as Minnesota.

Adaptation of an Ancient Egyptian Figure to a Modern Monument; Veiled Sphinx at Base of World War Memorial in Kansas City, Missouri

SPHINX UNDER VEIL OF GRIEF GUARDS WAR MEMORIAL

Veiled under a shroud of stone as though in perpetual grief, the figure of a sphinx has been carved at the base of the memorial to soldiers of the World war in Kansas City, Mo. The emblem was chosen as expressive of eternity and mourning.

HOLES FOR SWITCH BOXES CUT IN LESS THAN A MINUTE ²²⁶⁹

Driven by an electric drill or a hand brace, a cutter for making wiring outlets in plaster or wood, is said to finish a hole for a switch box in less than a minute when the drill is used and in about three minutes with the brace. The operation is performed by four saws placed in such a way that each one cuts one side of the opening. The tool is attached to the wall at the place where the hole is wanted with screws and then the drill or brace connected.

Cutter Used with Hand Brace, and Opening Made in Wall for Electric Switch

Borah and Hagenlacher at the Starting Line; the Billiard Ball Led at First, but Was Beaten at the Finish

SPRINTER RACES BILLIARD BALL IN NOVEL SPEED CONTEST

Can a sprinter run faster than a billiard ball rolls from the stroke of a champion player? To answer the question, Charles Borah, freshman at the university of southern California, pitted his speed against that of a ball driven by Eric Hagenlacher, balkline-billiard champion. The distance was seventy-five yards. For three-quarters of the way, the ball was in the lead and then friction got the best of its momentum, allowing Borah to finish ahead.

METAL STRIP TO HANG PIPE OF ALL SIZES

For hanging lengths of pipe from ceilings, steel tape, in handy reels of 40 or 100 feet, can be adjusted to fit conduit of any diameter, eliminates waste and requires no bolts. It is looped around the pipe, bent so that the end can be drawn through a narrow slit in the strap and secured by means of a cotter pin inserted through the two holes along the edges of the tape.

BRIGHT WRAPPING SELLS GOODS

Exporters have found that the color of the labels on their merchandise is an important factor among peoples of several foreign countries. In West Africa, wrappings with gaudy pictures of birds, beasts and fish help sell cloth. The Hovas of Madagascar prefer guns with highly ornamented stocks and bicycles painted with bright aluminum. South American natives are also fond of gold and silver paint. Chinese are particular in regard to colors. Green and white to them are indicative of mourning and must be avoided on packages, but red, yellow and gilt papers are popular, as they are also in India. Chinese buyers are especially concerned about tinned goods and will reject a whole shipment if a label is blemished, it is said.

SAFETY RAZOR THAT FOLDS UP FITS VEST POCKET

With finger grips instead of an ordinary handle, a safety razor that can be slipped into a small leather case and carried in the vest pocket is a convenience while traveling.

The grips fold flat when not in use, and are placed close to the cutting edge to steady the razor while shaving.

WHAT BECOMES OF OLD TIRES YOU THROW AWAY

Thousands of discarded automobile tires are purchased from garages and shops and sold to vulcanizers or rebuilders at prices ranging from fifty cents to \$5 each. Boots are made from old casings and some revenue is obtained from tire fabric of suit-

Consolidated Steel Strapping Co.

Experimenting with the Huge Airplane Detector: Earphones Are Connected to the Amplifying Apparatus in the Center

able length. According to one dealer, not more than five per cent of reclaimed rubber can be mixed with the crude in making new tires, for a larger amount will degrade the product. Chemists are experimenting with processes to restore life to old rubber and thus make it practical to use a large percentage. Inner tubes of the better kinds may reappear as rubber gloves or heels, while inferior qualities are used in matting and roofing. Not long ago, when prices for old rubber were high, enterprising junk dealers collected so much of it that, in a short time, 1,000 carloads of the material accumulated in the railroad yards of one Ohio city.

COURSES IN NAVAL TRAINING OFFERED IN UNIVERSITIES 61

Steps are being taken to establish naval-training units at Harvard, Yale, Georgia Institute of Technology, Northwestern university, and the universities of California and Washington. A four years' course in naval science and tactics will become effective in these schools at the opening of college this fall. Students will receive the same training as midshipmen and will be eligible for junior-officer commissions in the naval reserve.

MONSTER "EAR" TO FIND PLANES DEVELOPED BY JAPANESE 10

Shaped somewhat like a gigantic ear, an amplifying apparatus devised by Japanese army experts is said to have proved efficient in registering sounds from moving airplanes. In actual practice, it would be used to aid observers in detecting the approach of hostile ships, their direction and distance from batteries.

SLOGAN-BEARING STREET CAR AIDS SAFETY CAMPAIGN 2210

Painted white and bearing a number of slogans on the outside, a street car was used effectively during a safety campaign in an Illinois city. As a moving sign-board, it attracted wide attention to the necessity of using greater care in crossing intersections and taking other precautions.

Spreading the Gospel of Safety through the City Streets; Trolley Car Painted White and Bearing Cautioning Signs

What is the Most

Statue of a Leper King. Seated, the Only Life-Size Human Figure Found among the Ruins of Pnom-Pher, One of Asia's Mysteries

AT Angkor, in Cambodia, a province of French Indo-China, are the ruins of the Khmers—a vast, lost city which once held more than a million people, who disappeared, where and when no man knows, and left not the slightest trace of their destination behind.

That, says Burton Holmes, the great travel lecturer, is the greatest sight on earth today, and so he puts it at the head of his list of the seven most marvelous things he has seen.

Yet six times as many people crowded in to hear Burton Holmes tell about Switzerland and show pictures of the same scenes they had read about and seen pictured for years as came to hear him tell about the lost city of Angkor.

The reason, says Mr. Holmes, is that people prefer to hear and see the things they have always heard and seen, since it is to the places already known that most of us dream of going. Nobody, virtually, knew anything about the ruined city of the Khmers, and when the lecturer came back from a trip into the jungles of Cambodia with reels of movies and a vast store of fascinating information, he discovered

that not many people cared to know about it.

Burton Holmes has spent most of every year since 1892—when he was twenty-two years old—traveling around the world as deputy eye for the folks at home, and in his thirty-four years of travels he has covered more than three million miles outside of the United States, in addition to a vast mileage piled up at home during his winter lecture tours. He has seen every civilized country and practically every uncivilized one, and probably knows every nook and corner of the globe better than any living man, or any man that ever did live, since his occupation is, or at least once was, virtually unique.

Out of his thirty-four years' experience he compiled for Popular Mechanics readers a list of the seven greatest sights he has ever seen. One of the seven is in the United States—the Grand Canyon of the Colorado—and he puts it fourth on this catalog of wonders.

First of all come the ruins of Angkor—a vast city of magnificent stone buildings that have stood empty and alone in the midst of the jungles since their inhabitants, for some unknown reason, went away some eight centuries ago, never to return.

Second he puts the pyramids of Egypt, probably the most familiar man-made monuments in the world, and follows

Chinese Boatman Sculling His Craft through the Rapids Just Below Gorge of the Yangtze-Kiang

Interesting Place in the World?

Ruined Palace and Gardens of the Khmers at Angkor, Cambodia, Who Disappeared, with a Million People, When and Where No Man Knows, Leaving the World's Greatest Sight Behind in the Jungle

them with the Taj Mahal, acclaimed by artists and architects as the most perfect building ever erected.

Fourth is our own Grand Canyon, and fifth the little known Meteora monasteries, parked atop the granite cliffs overlooking some of the deepest gorges in all Thessaly. Sixth, he selects the shrines of Nikko, Japan, with their incomparable gateways—architecture well-nigh as perfect as the Taj Mahal, which also is a shrine, built by an Indian prince in memory of his queen.

Last come the gorges of the Yangtze-kiang, China's most famous river.

Of his seven greatest sights, one, the great pyramid of Cheops, is the only survivor of the famed seven wonders of the ancient world. The biggest and costliest tomb ever built, taking the work of 100,000 men for twenty years, it remains today a marvel to engineers because of its mathematical perfection. Standing originally 481 feet high, with a base measuring 755 feet on each side, engineers have been able to find an error of only sixty-five hundredths of an inch in the base and one three-hundredths of a degree in the angles of the corners.

The Nikko shrines of Japan, covering a vast forest tract, with one of the world's most beautiful roads leading for twenty miles to the uncomparable temple gates, are a memorial to two great warriors, Iyeyasu and Iyemitsu, once masters of Japan, but now gods. The two are the Caesar and Napoleon of Japan and in the three centuries or more that have passed since the great collection of shrines were laid out the setting has become one of the most beautiful in the world. The Yomeimon, or "Gate of Beauty," a thing of indescribable grandeur, commonly called by the Japanese the "sunrise to sunset" gate, because, they say, it would take fully that long to examine all of its marvelous carvings, is the gem of the shrines. Beneath the spreading eaves of a tiled roof, hundreds of furious beasts, dragons, lions, doglike creatures, "a sculptured nightmare," as Holmes describes it, is heavily overlaid with gold and lacquer, the inch or more of gold at places giving the effect of solid metal. Side by side with the grotesque creatures are beautiful gate panels that seem to actually bloom with gorgeous chrysanthemums and a maze of

© Publishers' Photo Service

Looking Out through the Marvelous Carved Marble Door Screen of the Taj Mahal, at Agra, India, Above, and the Taj Itself, at the Right, Famed as the World's Most Beautiful Building

delicate tracery. The workmanship is so perfect that no hidden defect has ever been found, but on one pillar the artists deliberately inverted a design and carved it upside down, stopping short of perfection out of deference to Heaven, and to avoid the jealousy of the gods who might be aroused by such a perfect piece of art from the hands of men.

Like the ruins of Angkor and the Japanese shrines, the monasteries of Thessaly are little known in this country. Perched on jutting crags, high above deep and dark valleys, they are one of the last surviving relics of an age when safety lay only in seclusion. To reach many of the group of buildings it is necessary to be tied up in a net and hauled aloft on a

rope lowered by the monks above. The principal buildings stand, apparently, on islands in mid-air, while all along the canyon sides, high out of reach, are the deserted caves and bird-nest-like dwellings once peopled by the hermits of the Middle Ages, when hermit hunting was a fashionable sport among the Turks and no one was safe if his home could be reached by anybody else.

Lecturing every winter before thousands of his fellow Americans, Mr. Holmes has accurately indexed their interests and desires. First, he says, they want to know about the countries of Europe, especially those they have visited or hope some day to see. To see, in the travel

© Baker

America's Contribution to the Seven Greatest Sights,
the Grand Canyon of the Colorado

movies, a place one has already visited, gives a bigger thrill, he finds, than to see the film of some country one never expects to visit.

His own choice, after trying them all, is Japan in the Orient and Italy in the Occident. Climate, customs and a wealth of beauty spots dictate his selection. He likes Japan, the Japanese and their habits so well that he has adopted Japanese dress—kimono and sandals—for his private life and only turns to European clothes when appearing in public. His studio in New

York, where he makes his home for the few days or weeks he can spare each winter from his lecture tours, is filled with works of art from all over the world, but Japanese treasures predominate.

He picked the pleasant occupation of wandering around the world looking at things for other people more or less by accident. "I wanted to lead the carefree life of a millionaire," says Holmes, "but I lacked the wherewithal, and so I became

13 41
a traveler and have been at it ever since." Born in Chicago in 1870, he had visited Europe at sixteen, going back again six years later. From that trip he returned with a wealth of pictures and information, and decided to give a lecture about what he had seen. It paid so well that he collected enough to go back again.

"It is ever fascinating to me," he says. "Japan always gives me pleasure, because, while it is now civilized and clean, yet it is totally different from anywhere else in the world. When I go to a foreign land I practice the Pierre Loti fashion of expatriating myself, living the lives of the natives better to understand the country. Above all places I think I should choose Italy and Japan in which to live, dividing my time between them. They are so good to look at and always refreshing and beautiful. Here in America we spend millions of dollars for carefully designed facades, and even then do not overcome ugliness in the skyline. There are more natural pictures for the eye in Italy than perhaps anywhere else in the world."

In his more than a third of a century of wandering he has been in more out-of-the-way places than a school geography de-

scribes, yet he claims never to have had any particularly thrilling adventures, and to prove his claim points out that, while he has lived on railroad trains for several months of the year, he has never been in a wreck, and that twice when ships on which he was to have sailed were lost at sea, something had come up to prevent his being aboard.

Yet in 1901 he crossed Siberia in forty-two days, before the railroad had been built. It took twenty-seven days to make 1,300 miles on river steamers, and thirty-six times when the boat stuck on sand bars, the passengers had to get out and help push it off, while, in between, they slept on crowded decks and lived mainly on quantities of tea.

As a war correspondent he was caught in the Italian front lines by an Austrian barrage, and escaped uninjured, only to find, when he returned to his car, that it had been blown to pieces by a shell landing far behind the lines. A few months ago, touring the battle fronts in Morocco, he heard bullets whiz by, but the guide explained there was no particular danger since it was only natives taking pot shots at the party because they were Christians.

Only One of the Seven Wonders of the Ancients Still Survives, the Great Pyramid of Cheops, in the Center, Which Holmes Places Second on His List of Wondrous Sight

© Newman

Above is the Yomiemon, or Gate of Beauty, of the Japanese Shrines of Nikko, a marvelous piece of gold-lacquer work, called by the natives the "Sunrise to Dark Gate" because it takes all day to admire it; below is one of the monasteries on the Rock Islands of Thessaly.

Within Easy Reach of Passers-By: Wire Basket for Rubbish on Street-Light Pole in Munich

RUBBISH RACKS ON LAMP POLES HELP KEEP CITY CLEAN

Receptacles for rubbish are conveniently placed within easy reach on the poles along the streets of Munich. They are easily kept clean, save the trouble of raising the cover on the old type of cans at the curb and the content is quickly removed for disposal.

WINDER FOR COILING SPRINGS MAKES DIFFERENT SIZES

Needing coil springs of various sizes for replacing broken ones in operations on the oil fields, an Ohio man devised a winder with which he could make his own.

It consists chiefly of a hand-power reel in which mandrels of different sizes can be used and the pitch or lead of the spring determined by the position of a little cam set in various

positions. Springs of a wide variety of length, and either right or left-hand, can be quickly coiled on this winder with as good results as on a lathe, it is claimed. The device is being put on the market by an eastern manufacturer.

EGGS CLEANED BY SAND BLAST TO PREVENT DAMAGE

To eliminate the drudgery involved in cleaning eggs and the harmful effects in washing the shells with various compounds, a combination sand-blasting and grading apparatus has been put into use by western producers. It has a capacity of 300 cases or 9,000 dozen a day. A fine grade of white sand is used for the cleansing and is driven against the eggs, three dozen at a time, by a current of air. After the scouring, the sand is blown out by a small fan. From the cleaning compartment, the eggs pass over a battery of powerful electric lights, and an attendant candles them as they move along to the packers, who put them in crates ready for marketing. Because of their excellent condition after this treatment, the product is said to bring from one to four cents more per dozen than eggs that have been cleaned in the ordinary way.

Egg and Poultry Association Seattle Wash.

AUTO JACK IN WHEEL SOCKET ALSO SERVES AS LOCK

Eliminating the use of a crank, lever or other means of lifting, an auto jack is slipped into a permanent socket on the back of the wheel. The car is then moved slowly until the base of the jack is fully on the ground. This raises the car sufficiently to give the tire on that corner a clearance of six inches. The jack may be used also as a mud hook and as a lock, a hole being provided for adjusting a padlock.

Earthquakes that occur under the ocean are said to have much greater severity than those experienced on land.

BUTTERFLIES FED ON BOTTLE AT UNIQUE FARM

L. W. Newman and Scenes at His Butterfly Farm; Thousands of Specimens Are Raised for Collectors

Bottle-fed butterflies may be seen in great numbers on the farm of an English naturalist who raises the insects for zoos, museums and schools. His charges number as high as 50,000 at one time, some of them being nourished by sugar and water which they sip from cotton stuffed into the neck of a bottle. During the egg-laying period, the moths and butterflies are confined in specially constructed cardboard boxes for better protection.

HARM OF TOUCHING POISON IVY REDUCED BY WASHING ⁵⁶

Several thorough washings with hot running water and ordinary alkaline kitchen soap, as soon as possible after contact with poison ivy, will greatly reduce the harmful effects from the plant, the de-

partment of agriculture states. The reason for this is that the poison usually requires some time to penetrate the layers of the skin so that it can be partly removed if the scrubbing is done soon enough. If a basin is used, the water should be changed frequently. The treatment may be continued with good results even after inflammation has developed. Applications of solution of cooking soda, Epsom salts or fluid extract of grindelia, diluted with four to eight parts of water, are beneficial, but if the poisoning is severe, a physician should be consulted. Washing is also recommended after contact with sumach or poison oak.

CHECK PROTECTOR LIKE PLIERS 2174 WORKED BY HAND

Checks are quickly and permanently safeguarded against forgery and raising by a hand protector operated like a pair of pliers. A dial on one side is turned to make an impression from number stamps, according to the amount of the check.

Wearing Golf Cap with "Magazine" of Tees, and Close View of Band, Showing How They Are Inserted

GOLF TEES ARE CARRIED IN HAT TO PREVENT LOSS

Space for several golf tees is provided in the outside band of a cap with a wide visor to shade the player's eyes. The tees are held securely and are always accessible, sparing the golfer the inconvenience of searching through his pockets or club bag.

TWENTY-EIGHT FLYERS SAVED BY ARMY PARACHUTES

Fibers spun by the caterpillar are flimsy and brittle, but woven into silk cloth for army parachutes, they have been instrumental in saving at least twenty-eight persons from death in airplane accidents. All these are enrolled in what is known as the "Caterpillar club." The dependability of the army parachute has been demonstrated repeatedly. Aug. 24, 1920, flyer O'Connor, a civilian, staged a leap at Mc-

Cook field expecting to try a "pet brand" of parachute. It failed to open, but his life was saved in the folds of an army chute which he had been persuaded to take along. The longest leap on the club's records was made from an altitude of 10,000 feet by Lieut. J. T. Johnson of Selfridge field, near Eaglesmere, Pa. Lieut. John A. Macready, noted altitude flyer, made a successful jump by night over Dayton. He guided his crippled plane away from the city where it would not be likely to do damage on falling, and jumped. Later, walking into a circle of excited persons who had gathered about his blazing plane, he gave them a startled moment, for they believed that he had been crushed under the ship. Aug. 29, 1924, Lieut. L. L. Kontz and Private W. E. Goggin of Bolling field both jumped from the same plane and landed safely.

AUTO SPRINGS OPERATE OILER TO LUBRICATE CHASSIS

When the auto bounces, the chassis is given an oiling. This is the feature of an automatic lubricator which utilizes the action of the springs to keep the chassis greased. An oil reservoir and plunger pump are so adjusted that, when driving over uneven roads, the deflection of the springs will actuate the pump, forcing a small amount of lubricant into the parts when it is most needed. Ordinarily, the reservoir needs filling about twice yearly.

FIGHTING ICEBERGS

Shattered Ice, Powder-Blackened, Is Hurled High in the Air as U. S. Coast Guardsmen Explode a T.N.T. Bomb in an Effort to Destroy an Iceberg Floating in the Steamer Lane

American Coast Guardsmen on the International Ice Patrol Ride Herd on Drifting Mountains and Try to Destroy Them

By F. A. ZEUSLER

Lieutenant Commander, U. S. Coast Guard

*U. S. Modoc
Halifax, Nova Scotia*

IT is midnight in the open North Atlantic off the Grand Banks of Newfoundland, and the U. S. coast guard cutter "Modoc" is rolling in the heavy swell. On the high bridge seamen stand at the searchlights, playing their beams over a mountain of ice. All around us is the hurrying traffic of the busiest ocean boulevard in the world—the North Atlantic steamship lane. Warned by the lights focused on the million and a half tons of iceberg, the ships veer to the south and dash past at twenty knots.

Fourteen years ago, in these same waters, the giant "Titanic," making her maiden trip, plowed into an underwater off-shoot of one of these giant bergs and went down with more than 1,500 souls. The next year the International Ice Patrol, paid for by all the big maritime powers, but performed by two American coast guard cutters, came into being, and since that time not a ship has been lost.

In the radio room of the "Modoc," or her sister cutter, the "Tampa," when they exchange places, as they do each fifteen days, operators stand by every hour from

March 1 to the middle of July, copying and transmitting a steady stream of messages. Last year the ships of fourteen nations—more than 500 of them in all—were guided through the danger zone by the radio reports from the ice patrol.

Greenland's icy mountains, made famous by a song, furnish all the bergs that menace the Atlantic shipping lanes. Each spring they break loose from the glaciers and start on their 1,800-mile journey south to eventual disintegration in the warm Gulf stream. On March 1, the ice-patrol ships put to sea, one from Boston, bound direct for the danger zone, and the other from Wilmington, N. C., en route to Halifax, N. S., the base of operations, where they refuel, take on provisions and give the crews shore leave between patrols.

One man of the two crews, the oceanographer, remains on duty on the Banks throughout the season, transferring to the relieving boat each time. His duty is to keep track of every berg, plot its position and course, and furnish the radio bulletins of information and warning to shipping. As the first cutter puts to sea, a

radio message is broadcast to all ships and land stations that the ice patrol is on the job, followed by a request that all shipping approaching the Banks send position, course and temperature of the sea at four-hour intervals. The last is the important thing. The bergs, sweeping south in the Labrador current, meet the Gulf stream near the Grand Banks, and rapidly disappear in its warm water. The Labrador current, however, is not a year-around stream, but a river of cold water that starts flowing south in the spring, continues for a few months, and then, after losing an unequal battle with the Gulf stream, disappears until the next year.

Early in the spring the two meet down below the southern end of the banks, the cold stream gradually increasing in power until it is whirling the icebergs southward as fast as two miles an hour. Then it begins to fall off, as the warm Gulf stream swings farther northward, and finally, about July 1, disappears for the season.

The line of their meeting is not an imaginary one, but a well-marked spot, with olive-green water north of it and the indigo blue of the Gulf stream on the south side. The cold wall is also the usual border line of the fogs that cling for fully half the time over the banks.

The four-hour temperature readings pour in from a multitude of ships. By the end of the first fifteen-day tour, we have hundreds, perhaps a thousand or more, such readings, all set down on a

chart, and thereby the outline of the danger zone. We can tell then whether it will be a bad ice year, as 1926 was, with bergs far south of their usual range, or whether it will be a mild one.

All the time the patrol is locating bergs, sweeping north far up toward Greenland to inspect the south-bound squadrons, and then back down to the danger line to ride herd on them as they arrive. Each morning and evening at the same hour the report of every berg in the steamer lane is broadcast. The broadcast message gives the position of each berg, its size, drift and speed. During the day, as each new berg is sighted, a special broadcast announces the fact, and every hour calls from many ships are answered giving special information.

Each berg as it is sighted is photographed, sketched and studied, its course and speed calculated, and finally it receives a number by which it will thenceforth be known until the Gulf stream melts the last of it. Each one has distinguishing marks and peculiarities that are soon recognized for future identification.

Contrary to an accepted belief, icebergs do not turn turtle often, nor usually until near the end of their days. When the patrol first meets them in March, they often are more than 500 feet long, longer than a city block, and the visible portion—which is only one-eighth of their mass—will tower 250 feet or more into the air. Bergs of 1,300-foot length have been seen. The patrol crews divide them into two main

Only One-Eighth of a Floating Berg Is Above the Water, Though the Visible Portion Often Is 200 Feet or More in Height and Longer Than an Average City Block

Cruising Close Alongside, the U.S.S. "Modoc" Rides Herd on a Wandering Berg as It Drifts Southward into the Transatlantic Steamer Lane near the Spot Where the "Titanic" Was Sunk

classes, solid bergs and "drydocks." The latter is simply a berg with a deep saddle depression through its middle, leaving two peaks standing at either end, and bearing a marked likeness to a floating drydock.

So far no great success has been awarded attempts of removing the menace. Last year, the coast guard began experimenting with bombs and mines. In previous years shell fire had failed utterly. A six-pound projectile, fired point blank at 150-yard range, will not penetrate more than half its length. The mines were not much more successful, though, toward the end of a berg's days, they will hasten disintegration by opening up new cracks.

Each year since the patrol was established, in 1913, the anniversary of the "Titanic's" loss, on April 14, has been observed by the crew. At 3:00 p.m., in response to a radio appeal, all ships in the North Atlantic shut down their radio sets for five minutes while the coast guardsmen gather on the after deck of the cutter. The church pennant is hoisted above the American flag at the stern, the ship's surgeon, doubling as chaplain, delivers a suitable memorial address, and three rifle volleys are fired across the waters where the great liner went down.

The ice patrol is carried on in the midst of one of the greatest fishing zones in the

world. All around on the Grand Banks, the North American fishermen are working away through almost constant fog, while farther to the east and north is a vast fleet of barks, barkentines and great square-riggers which come out each year from France. To the fishing boats the presence of the patrol cutters prove a godsend. The coast guardsmen trade tobacco and vegetables to the fishermen for fresh fish; the surgeon visits them to set broken arms and legs and treat various diseases, and the cutter's mechanics are always ready to make repairs on a broken fog gun or other gear.

Coming out freshly provisioned each two weeks, the patrol ships find the icebergs have their uses, for a boat can always be lowered to chop off a supply of ice for the ship's refrigerators. The bergs, breaking away from the snow and ice cap of Greenland, which in places is as much as a mile thick, are composed largely of snow, compressed into ice, which accounts for their generally white color, shot through with greens and blues. When a boat draws alongside, where small particles are dropping into the water, the newcomer is surprised to hear the ice effervesce as it strikes the sea, like so much soda water. The reason probably lies in the presence of air in the compressed snow.

Always on Duty and Visible to All Motorists, This Dummy Policeman Guards School Crossing

BOYS' DUMMY OF POLICEMAN GUARDS STREET CROSSING

Boys in the woodworking class of a California high school have constructed a dummy traffic policeman to maintain constant guard at an intersection near the building. It is firmly attached to the pavement in the middle of the street and bears aloft a warning sign that is visible at some distance to motorists approaching in either direction.

PROOF OF WEIRD FISH TALES FOUND IN COLLECTION

Specimens that furnish a basis for some of the wild stories told about inhabitants of the deep seas have been gathered during a 20,000-mile cruise of the schooner "Blossom." One of the most interesting species captured was a Portuguese man of war, a fish having tentacles speckled with microscopic bombs which explode when they strike a victim and minute harpoons that inject an acid poison into the flesh. Another, known as the "sea devil," closely resembling the stingaree, is said to be able to pull the weight of a vessel after running afoul of the anchor chain, and a

blow from its wings will stave in a small boat. The golden dolphin was also captured. These fish are reputed to be the swiftest inhabitants of the ocean.

TELLING TIME BY STARS EASY WITH AID OF POCKET DIAL

For thousands of years, man has checked the passage of time by the position of the stars, but for the most part, this task has been left to the astronomers and their great telescopes. Now, with the aid of a little pocket dial, almost anyone who can read can learn the hour of night by consulting the stars. The instrument consists of an aluminum disk with a hole in the middle and two movable arms which rotate about the center. The circumference of the disk is marked out into the quarter hours of a twenty-four-hour day and an inner circle is graduated into the months and days of the year. The observer first sets the date arm and, with it pointing downward, sights the north star through the hole in the disk. Then he moves the time arm around until it is lined up with the two edge stars in the bowl of the Great Dipper. At that position, the arm will indicate the correct time. The instrument, which simply translates the movements of the "heavenly clock," the circuit of the Great Dipper about the Pole Star, into hours, may also be used for estimating latitude and longitude. With its carrying case and instruction book, it

Dial for Telling Time by Stars, Showing Date and Time Arm and the Graduated Center

weighs less than an ounce, fits flat in the pocket and is serviceable to campers.

Remarkable Night Photograph of Hollywood Bowl Where Twenty-Four Pianos Were Played in Ensemble to Test Acoustics of This Natural Outdoor Theater; It Has Seats for 30,000 Persons

PLAYING TWENTY-FOUR PIANOS TESTS OUTDOOR THEATER

Music from twenty-four pianos, played in ensemble, was one of the features of the dedicatory program in the newly constructed Hollywood bowl, near Los Angeles. This outdoor theater has remarkable acoustics, tests having shown that sounds can be more clearly heard in it than in many interiors. There are seats for about 30,000 persons, and the bowl is one of the first units in a proposed \$1,000,000 public center in the Hollywood hills.

MYSTERY IN FLOATING ISLAND THAT RISES AND SINKS

Rising to the surface about the middle of August each year and sinking in February, a floating island on a small lake in Michigan has been a riddle to investigators. Efforts have been made to keep it submerged under tons of rocks but it hobs up again in spite of the burden. Another floating island on Henry's lake in the Rocky mountains is said to sail at the rate of five miles a day, and unsuspecting travelers who land on it quickly become con-

fused and often lost. Some of these wandering isles are accumulations of brush and driftwood and their alternating rise and fall has been attributed to the growth and decay of perennial plant roots.

SHOE POLISHER FOR HOTELS TO SAVE FURNITURE

Consisting of two rollers, a block and a shining cloth, a shoe-polishing stand

intended for hotel rooms is expected to prevent needless marring of chairs and other articles of furniture. The cloth is adjusted in such a way that all parts of the shoe can be reached and, when not in use, the lid of the stand is lowered so that it may be

used for other purposes. A similar polisher is being made for home use.

WHEELED STAND FOR PAINTERS ADJUSTED WITH CRANK

Portable Staging on Painting Job; Workman at Right Is Elevating the Platform with Crank

As a substitute for ladders or suspended scaffolds, an elevating platform on wheels enables painters or other workmen to keep a convenient operating position with little time required for shifting from place to place. The platform is raised or lowered by means of a hand crank and is geared for easy manipulation. Little danger attends the use of this equipment and it saves scratching the sides of walls.

SAW WITH REMOVABLE TEETH CUTS ACCURATE GROOVES

For grooving, molding and other special operations, a saw with removable teeth of high-speed tool steel, is said to insure accurate work and to save time in sharpening. Wear on

the teeth is compensated for by moving them outward, as needed, a rack fitting a special lock providing exact adjustment

with little trouble. New cutters or those of a different pattern may be inserted without taking the saw from the mandrel.

BURBANK'S WORK IS CONTINUED THROUGH UNIVERSITY

Although Luther Burbank is dead, his experiments are being carried on under a foundation controlled by Leland Stanford university. The plant wizard made the arrangements not long before his death, as he preferred to have his work continued rather than accept large sums which were offered him for his thirteen-acre farm. Thousands of the plantings are yet in the developing stage and will require years of research before final results are known. In all, there are 53,874 plants, trees, shrubs, bushes and vegetables in the picturesque and extensive gardens.

PEN POINTS QUICKLY CLEANED WHILE STILL IN HOLDER

Without removing them from the holder, pen points are thoroughly cleaned with a pincer-shaped, padded accessory. A German inventor has devised for the writing set. The soft lining prevents injury to the point, absorbs clotted ink and also keeps stains from the fingers.

The cleaner is finished in different styles to harmonize with the other writing equipment in a special set.

GOLD BURIED DURING CIVIL WAR SCRATCHED UP BY HEN

Scratching in a Kentucky garden, a hen uncovered a mystery of sixty-two years' standing. She dislodged a gold piece that was part of a \$1,600 treasure pot buried by a man as he entered the Civil war in 1864. He died a prisoner without revealing to members of his family where the gold was hidden. It was all recovered, after the first piece was found.

Model of the Spiral-Floor Garage; Cars Are Seen Winding About as Though Entering and Leaving, and Storage Spaces Are Indicated; Roomy Center Area Easily Affords Two-Way Traffic

SPIRAL FLOOR IN HIGH GARAGE REPLACES RAMPS AND LIFTS

Automobiles ascend under their own power, without the need of elevators or ramps, in a patented skyscraper garage devised as a solution of the parking problem. It is estimated that a building of this type, holding 500 cars, could be emptied or filled in thirty-three minutes. The floors are arranged in spiral fashion, furnishing a continuous driveway at gentle slope from the top to the bottom. Drivers can handle their own cars without the assistance of attendants and, when they reach their floor, they may walk down steps or ride in passenger elevators. The spiral plan may be adapted entirely to shop purposes, allowing a promenade

in the center of the structure with abundant show-window space on the inside. In the garage plan, the central spiral is wide enough for two lanes of travel, one ascending and the other descending.

TRACTOR WHEEL WITHOUT RIM REDUCES POWER LOSS

Self-cleaning and of simple, rigid design, a rimless tractor wheel devised by a western inventor is said to eliminate one of the chief causes of loss of power in such units, that is, the tendency of the soil to become packed on the wheel, thus decreasing traction. A firm grip on the roadway is obtained by means of separate treads spaced sufficiently far apart to permit loose soil or mud to slip through.

Tractor Wheel with Separate Treads Instead of Usual Corrugated Rim; Space Is Left for Dirt to Fall

Artist's Drawing of the "Flying" Stages Arranged for an Oriental Ballet; Platforms Can Be Elevated Nine Feet and Run Outward to the Footlights, Back Stage or to Either Side; They Are Controlled by Levers at Right; a Curtain Drop Unwinds and Conceals Lifts as Platform Rises

WHEELED STAGES GIVE NOVEL EFFECTS

Saving time in shifting scenes and affording opportunity for settings that would be impossible or constructed only at great expense on an ordinary platform, lift stages on wheels have been added to the theater's equipment. They are propelled by electric motors and lifted by hydraulic pressure. They may be rolled sideways, backward or forward on small steel tracks set in the stage proper and, if desired, can be pushed entirely out of the way when not in use. Two

of these stage cars were installed recently in a new Chicago theater. The larger, nine feet wide and thirty-two feet long, weighs about 5,000 pounds. While an act is in progress on it, a second may be staged on a smaller car, which rolls under the larger or may be used alone. Lifts raise the cars to a height of nine feet above the main stage. To shift gears, so that the car may move from a forward to a sideways direction, or vice versa, a lever is turned at the back of the car.

NEW STYLE OF STEEL HELMET GIVES MORE PROTECTION

More of the face is shielded by a new style of steel helmet submitted to the ordnance department, and its higher crown is also regarded as a factor in its favor. It has a steeper slope so that, it is expected, missiles will be likely to glance off and do less damage.

Howard's
SMITH MOST COMMON NAME

JOHNSON CLOSE SECOND.

According to estimates of a statistician, there are 1,304,300 Smiths in the United States and 1,024,200 Johnsons. Brown, Williams, Jones, Miller, Davis, Anderson, Wilson and Moore follow in the order named. This relation varies in different cities. In New York, for instance, Cohen is second to Smith and Schwartz fifth. In Chicago, the Johnsons are more numerous than the Smiths. Meyer occupies third place in Cincinnati, and in Boston the Sullivans claim second. The estimates were prepared from army and navy enrollment files and are based on a population of 112,000,000. Why there are so many Smiths is a puzzle. In early times, one name was enough. Apparently, when surnames were chosen, more persons took that of the craftsman than any other, but the reason is not plain. Another riddle is why John's son so far outstripped James' son or Philip's son.

SAFETY SIGNS FOR CHILDREN WARN AGAINST AUTOS

To reduce automobile accidents at street crossings near schools, Herman Richter, Jr., a twelve-year-old Springfield, Mass., boy has devised clever warning signs for the pavement. They show a comic figure with hands raised over the word "Stop," and another with head turned in the direction of approaching traffic over the caution, "Look." Both figures and letters are legibly painted in characters large enough to attract the eye from a considerable distance. Young Richter was presented with a prize for his creation which has been highly commended by safety experts.

Pictures and Lettering on Pavement Warn Children and Other Pedestrians of Hazards of Crossing

"Walking" to Pump Up a Tire; Foot Action Forces Air through Hose without Stooping Over

FOOT PUMP FOR AUTO TIRES ELIMINATES BACK STRAIN

Operated by foot power, a pump for inflating automobile tires saves the arm and back strain usually accompanying the working of the ordinary hand pump. The weight of the body compresses the two plungers of the new pump, the user simply "walking standing still" to force the air.

DOG POPULATION OF AMERICA TOTALS SEVEN MILLION

Estimates of the department of agriculture show that there are approximately 7,000,000 dogs in this country. About sixty breeds are recognized and forty-six of this number are considered of sufficient importance to be included in an official classification which has been issued by the department. A short discussion of each breed gives the reader concise information concerning its history, general characteristics, utility and distribution.

Pouring Rubbish from Metal Basket into the Incinerator, Which Destroys the Material without Any Odor

GARBAGE BURNER FOR HOME ELIMINATES ODORS

Garbage and other refuse are said to be destroyed economically and without odors in a gas-burning incinerator, intended to be placed in the basement and close to a chimney where a good draft will be available. It has a capacity of about four bushels, a week's deposit for the average family, but occupies only two square feet of space and is said to use but little gas. It is filled from an enameled basket, which is to be kept in the kitchen, and is easily put into operation. An automatic shut-off for the gas may also be obtained.

SELF-ADJUSTING PIPE REAMER FITS ANY SIZE BOWL

Pipe bowls are quickly and easily cleaned with a reamer that fits snugly against the sides of the bowl and is worked to the bottom simply by turning it around. Carbon and other waste matter are scraped away. The cleaner is self-adjusting so that it fits all sizes of pipes, large or small, without injuring the wood.

HERO OF DEATH DIVES TELLS OF HIS SENSATIONS

Besides performing a great service to aviators in testing equipment, parachute jumpers have exploded some of the myths about falling from high places. It was once a common belief that if a person fell from a very tall building, he would be unconscious before reaching the ground because of his rush through the air. Capt. H. Spencer, an English parachutist who has made more than 180 head-first leaps from airplanes, testifies that he is clear-headed even after a drop of nearly 1,000 feet before pulling the cord. There is no feeling of mental confusion or dizziness, he says, although the sensation of falling is present. Estimating the distance dropped, enables him to pull the cord at the right time. This calculation is not always easy, as no objects go flashing past to help judge the speed, and the jumper is alone in the empty air, often looking upward to see how the rigging functions. Some parachutes are made in three units, a pilot bag which comes out first, dragging a larger or shock support, followed by the third or main umbrella, large enough to check the descent sufficiently to prevent a violent fall to the ground.

WRENCH FOR AUTO HEADLIGHTS WILL NOT MAR METAL

Headlight rims are quickly and easily removed without scratching the finish by means of an adjustable wrench consisting of a strip of strong fabric and a lever with protruding points on one side. The strip is formed as a loop about the rim, passed through a link at the head of the lever, where the points come in contact with the wrench to help tighten it. It fits different sizes of lamps and can also be adapted to turning other objects.

Chicago

A Glimpse of Timbuctoo, Calif., as It Looked in the Days of the Forty-Niners; Inset Shows the Ruins of the Town's Commercial Center Where Gold Dust Was Bought

near Marysville
 Only time-worn ruins of the town of Timbuctoo remain in the northern mine country of California. History says that a group of "State of Mainers" set that thousand-year-old desert name down in the foothills, when they came with pan, pick and shovel to do the first placer mining in 1849. Timbuctoo itself, once gay with work and play, is now but a memory and a name—a mere dot of a cabin perched on the point of a hill to the right; a barn, a well—once the village pump—and a tree-shaded home on the left, and the sturdy ruins of the building which once centered the commercial life of the town. Of brick and native stones, its iron doors still on guard, it has held its own. Painted on the space between the doors with pigment to which time and weather alike have been as nothing, is a sign that still announces to a curious world: "Gold

Dust Bought." A copy of an old picture shows that once oak trees grew undisturbed in the street of the town, shading and guarding the old bank. To Timbuctoo, as to many other camps in the days of '49, came first the placer miners. They worked the surface. Next, because this method was too slow and the results too small, ingenuity worked out the hydraulic process which tore down whole hillsides into the sluice boxes where the crosswise riffles caught the gold from the rushing water. Then the white miners left and the Chinese came, content to work slowly where others had rushed. At one time there were more than 500 of them, it is said, patiently working the old tailings over and over again until, the profits becoming too scanty, they, too, moved on, and Timbuctoo went quietly down the years, remembered only by a name.

ANTICS OF ANTS

One of the most interesting species of ant is the so-called "umbrella" variety, found in South America. The name probably originates from the way the insects

carry their loads over their heads like a shade. They build huge mounds, some containing as much as 200 cubic yards of material, and can strip a good-sized orange tree in a single night. A colony includes queens, drivers, workers and builders. They make well-beaten paths into the forests, four or five inches wide, in search of food. Sometimes, one of these paths will be lined for half a mile or more, with ants busily carrying their burdens, while countless thousands are swarming in a doomed tree and in the mound. They dislike water and, when rain starts, hurriedly drop their loads and seek shelter.

EIGHTY-ONE-STORY BUILDING UNDER WAY IN DETROIT

21 What will be the world's tallest building, eighty-one stories high, is under construction in Detroit, Mich. It will be known as the Book tower and will top the Woolworth building in New York by nearly 100 feet. The main portion of the structure will include forty-two stories. On the top of the tower will be placed a gigantic searchlight expected to be visible for more than seventy-five miles. Modern Gothic will be the architectural style.

Models of Atomic Structure, Which Indicate to the Synthetic Chemist What He Must Do to Accomplish His End; Roughly, They Represent in Tangible Symbols, How Atoms Combine with Each Other to Form Different Substances

What Chemistry Is Doing for You

Modern Wonder Workers Turn Milk into Umbrella Handles and Oat Hulls into Radio Dials

IT has been many years since the alchemists of old sought in vain the secret of changing base metal into gold.

Since that time chemists have learned to make artificial silk, rubber, dyes and have created any number of things that never existed before. In many cases they have not only succeeded in duplicating the product of nature's laboratory—they have actually made stronger, purer and more lasting things than nature.

Just a few of the many miracles of chemistry are the making of buttons from corn cobs, umbrella handles from milk, poker chips from cheese, radio dials from oat hulls, meringue from beef blood and furniture from carbolic acid. Not only are handsome pens and pencils products of milk, but so are the "pearl" buttons on a shirt, buckles on milady's shoe or the back of your waistcoat, cigaret holders, ladies' beads, toilet articles, umbrella handles, electric switch plates, mah-jong counters and lots of other things of everyday use-

fulness. The hard buttons on your overcoat, the handle of your penknife, billiard and pool balls, even the radiator cap and timer of your car—very possibly your pipe, too; anyway, a host of other things in ordinary use are apt now to be made from the hulls left when your breakfast cereal is milled.

Even the rich yellow of the lemon is merely a matter of chemical artifice. The fruit of the lemon tree contains more citric acid—which is what the housekeeper buys it for—just before rather than after it is fully ripe, hence it comes from its native habitat a brilliant green which the sun has had no chance to turn yellow. You would not recognize it as a lemon, nor would you buy it. So the "true lemon color" you do know is obtained by its later exposure to ethylene gas.

The meringue on your favorite lemon pie is quite likely not white of egg at all, but beef blood from a slaughterhouse. Then there is a glass which will bounce

like a rubber ball when dropped on the floor; artificial fabrics which include not only the "silk" with which we are becoming familiar, but artificial cotton as well, and even wool; enduring "paints" which are not paints at all in the old sense and synthetic colors with which nature has had nothing to do; sirups which never crystallize (turn to sugar) so that candies made of them remain fresh indefinitely, and their heavy cream centers may actually be turned to liquid after the chocolate exterior has set.

Twentieth century chemistry is modern magic. The American chemist of 1926 is a wonder worker beside whom magicians and alchemists of the past simply fade out of the picture. In laboratories far from the rush and bustle of life, a thousand and one chemists dig deep into nature's secrets, and humanity is forever being made more comfortable, given greater conveniences and made more efficient through practical application of what they learn. Always, too, some waste product or by-product, hitherto discarded, is being put to splendid, practical uses. However startling the statement may seem, it is a fact that there has been more progress in chemistry in the last ten years than in a thousand years before.

"Nor is it fair to deprecate chemical products as substitutes," says Dr. John E. Teeple, treasurer of the American Chemi-

cal society. "If a genius creates something which has the exact properties required, and is possibly better suited to its purpose than any natural product, he has given the world that for which he should receive high praise.

"To illustrate," he goes on, "take dye-stuffs. Valuable land can now be devoted to the raising of food which formerly was given over to indigo, madder and other vegetable dyes, for we now replace those with synthetic dye materials which are better in many ways."

Fountain pens, buttons and poker chips from cheese! That's karolith—triumph of American chemistry—made of casein. Chemists worked it out after five years' trying. Casein is one of the products of milk, and skim milk, from which the butter fats have been removed, is largely casein and water. The farmer feeds skim milk to hogs and throws out barrels of it. Chemists coagulate casein by adding the same rennet used in cheesemaking and get a rubbery mass. A chemical then turns this product into a tough, hornlike material with astonishing strength.

These technicalities may sound dry, but we are about to connect up your coat buttons and the oat hulls and corncobs. Enormous quantities of oat hulls come from breakfast-cereal manufacture, a half million pounds or more a day, with little value as fuel and not much more as cattle feed. But the chemist found quantities of furfural in oat hulls while trying to make them more palatable for the cow that gives the casein.

Cooking an Egg over Liquid Oxygen, Prepared in Apparatus at Right, at 300 Degrees below Zero, and Contained in a Hole Chopped in Block of Ice

Heylandt Sales Co.
140 S. Dearborn.

for U. S. Mexico
and Canada

Probably not
commercialized
by H. S. Case, U. S. Bureau of Chemistry
Important—developed

Meantime government chemists were learning the trick of getting furfural in paying quantities from corncocks, too.

Furfural has many uses. It is an excellent germicide and disinfectant, a superior base for certain dyes, and an admirable solvent for use with paint which is sprayed on instead of being brushed. Such paints dry by evaporation, leaving a permanent coating that practically unites with the original material.

Then there is bakelite made from carbo-lic acid. It is named for Dr. L. H. Baekeland, of Columbia university, who invented it. Besides coming in solid form it can be used as a liquid in varnish, enamel, lacquer, and so on. More fascinating is the likelihood that we shall make furniture of bakelite and similar substances, which can be cast or machined in almost any form, are proof against acids and, what is more momentous, against scratches, take a high polish and can be produced in every conceivable color. Chemists making furniture for us from carbo-lic acid! It has already been done and will be done commercially soon.

Soon, too, some names must be found for artificial wool and artificial cotton, which are coming fast, as yet largely as a by-product of the vegetable silk industry. Think of wood being transformed into a soft, fleecy "lamb's wool"! As for artificial cotton, much of the absorbent we now use is actually made from wood fiber. The ever-present chemist again.

America needs much more white of egg than the American hen produces—though she does very well of yolks—and has imported annually tons and tons of albumin from China, which the Chinese gather from sea birds' eggs and dry. Now come the chemists who get excellent and wholesome "white of egg" from the blood of the Texas steer.

But for the chemists, who have given us the tungsten filament and the gas-filled electric lamp, Americans would annually pay a billion dollars more than they do now for the electric light we use; that is, if we were restricted to the old carbon filament lamp of past years.

Inspecting a Sample of Oil, and Drawing Off a Portion from the Crankcase for Test

TESTER FOR CRANKCASE OIL PREVENTS MOTOR ILLS

If the crankcase oil needs renewal, the fact is quickly learned with a tester designed to show if the lubricant is too thin, worn out or otherwise likely to cause the ills that attend old oil. A small sample, drained into the tester, is sufficient, and the result is quickly obtained.

BIG BROOM ON RUBBER TIRES SAVES WORK IN SWEEPING

Mounted on a two-wheeled, rubber-tired carriage, a big broom for sweeping walks or floors need not be lifted after each stroke and is easily pushed. A rearward pull of the handle is all that is necessary to raise the bristles, and a forward shove lowers them to working position. The broom is reversible and adjustable for wear on the fiber. At least fifty per cent more surface can be swept by one person with this arrangement, the manufacturers claim.

Wide Broom with Its Rubber-Tired Carriage Is Easily Pushed and Cleans a Large Area

Hutchins & Co. 1325 Burns Ave. St. Paul, Minn.

Fine Lenses in the Rough; Glass Nuggets Being Broken Up into Pieces Suited for Grinding

NUGGETS OF GLASS BROKEN UP TO FIND PERFECT LENSES

Fine optical glass for camera and microscopic lenses is now being produced in quantities in the United States as one of the results of the World war. Formerly the best lenses were imported from Germany, where lens making had been developed to a fine art, but when the war cut off the supply and vast quantities of binoculars and other optical devices were needed for the American army, an industry that now rivals the best German factories sprang up almost overnight. At a recent meeting of the Royal Society in London, tribute was paid to the remarkable way in which American glass makers had overcome all the difficulties of producing fine optical glass. In the rough, the glass emerges from the furnace as huge nug-

gets, crisscrossed by the fissures and lines resulting from the internal stresses of cooling. Such a nugget must be broken and rebroken until from its heart the lens maker extracts pieces of perfect glass suitable for his work.

WHAT IS A TON?

Tonnage of a ship refers not to its weight, as is often supposed, but to its carrying capacity. The term originated in the time of King Henry VII of England who introduced one of the first navigation acts of its kind in which the importation of Bordeaux wine in any vessels except those owned by his lieges was forbidden. The liquor was carried in huge barrels called tuns and, since then, the cargo capacity of a ship has been measured by tunnage or tonnage, the modern term. In connection with war vessels, however, the word refers to the weight of the water they displace, or their displacement tonnage, the common way of describing the weight of other ships.

PAPER-MAKING MACHINE MODEL FORMS FOUR-INCH STRIP

Many models of industrial apparatus merely illustrate the movements of the larger units, but a tiny paper-making machine, constructed by French experts, actually makes paper. It yields a sheet four inches wide and the entire mill is but two feet wide, two feet high and nine and one-half feet long. It took builders some twelve years of labor before the model was completed.

Model Paper Mill in Action; It Duplicates the Larger Units in Practically Every Detail, Making a Strip of Real Paper Four Inches Wide; the Machine Is Less Than Ten Feet Long

Made in France
H. H. Wahl & Co., 308 Chestnut St.
Phila.

BORE HOLES AROUND VOLCANO TO STUDY ERUPTIONS

In the belief that changes in temperature will be more easily determined and thus the likelihood of eruptions foretold, scientists, under the direction of Dr. Thomas A. Jaggar, have bored a number of holes ten feet deep around the crater of the Kilauea volcano on the island of Hawaii. The openings are cased around the top and capped so that temperature tests may be taken at any time. It is thought that a rise in the mercury would presage an eruption and thus a "log" of the life of the volcano would be afforded. The holes are 1,000 feet apart and were dug with compressed-air drills.

VEST-POCKET SIZE HAND PUNCH IS USEFUL IN HOME

For the mechanic and home worker, a small punch now on the market is said to penetrate readily sheet material up to about three-thirty-seconds of an inch in thickness with a minimum of effort. The punch itself is contained in the end of a threaded screw which has a small lever handle for power. The die into which the metal is forced, is in the base of the frame. A gauge prevents forcing in sheets too thick

to be penetrated, and the entire punch is so small that it may be carried conveniently in the vest pocket.

UMBRELLA TO MATCH RAINCOAT CONTAINS RUBBER FABRIC

In the wake of the brilliant-hued raincoat has come the umbrella to match, a rubberized article that is said to weigh no more than the ordinary kind and has a soft, velvety finish, without the glaze sometimes considered an objection in material of this kind. The frame is strongly constructed with ten ribs, and the umbrella is furnished in a wide variety of shades ranging from blue, green, red and other plain colors to plaid.

Illustrating the Way Rake Is Used, and Close View of Teeth Reaching between Shrubby

LAWN RAKE WITH LONG TEETH USED LIKE BROOM

Equipped with long, steel tines that reach in between the shrubbery and do not tear up the sod, a special rake for lawns is wielded with an easy sweeping motion, does not become clogged readily and stirs the soil without injury. The tines are fitted securely into a steel yoke.

CORRUGATED-METAL SHEARS CUT WITHOUT DISTORTION

In cutting sheets of corrugated metal, the edges are usually bent out of shape and have to be straightened. This is said to be unnecessary with a lightweight pair of shears, nearly small enough to be slipped into the pocket, which cut straight, on curves or obliquely across the sheet without distorting the corrugations. It has two rotary, double-edged cutters, knurled on the shearing edges, and is held to the metal by means of a screw cap, which may be quickly loosened when the operator desires to withdraw the shears.

Our RADIO WORLD

Dr. Lee De Forest Forecasts Future Developments in Wireless

By J. OLIN HOWE

WHAT is on the radio horizon? And beyond it? What lies over the hill?

"Radio will be as much a commonplace with the next generation as the telephone with this, lifting civilization to new levels," answers Dr. Lee De Forest, inventor of the "talking lamp," the radio tube known as the audion.

Although more than 3,000,000 radio sets were placed in American homes last year, the tube is only twenty years old. Without it we should be unable to telephone across the continent, and multiplex telegraphy and telephony both—by either of which numerous messages may go over the same wire circuit at the same time—would be only a dream.

The tube makes possible the sending of pictures and writing by wire or by wireless, it gives us the talking movie, it has revolutionized the art of recording and reproducing sound by the phonograph, and it will give us television, and much besides.

Yet the real birth of radio as we know it today occurred twenty-six years ago when De Forest, sitting in his \$2-a-week hall bedroom in Chicago on a warm September evening, first observed the "Welsbach effect" which led to the invention of the talking lamp later on.

"I went crazy mad over that," Dr. De Forest said recently, "because the fluttering of the flame in the Welsbach burner gave me the idea that heated gas around an incandescent mantle might be sensitive to wireless waves. Later I substituted the filament in the electric lamp."

De Forest was hardly more than a year beyond his graduation from Yale at the time, but had been out in the workaday world long enough to find that his degree got him very little there. An electrical company was willing to pay him \$8 a week and he eked out this income by translating French articles for a technical publication and by teaching nights. It was the same company that later paid him

of TOMORROW

something like 50,000 times the amount of this his weekly salary for the right to use his tube in the telephone business. Not at once, however, did De Forest perfect his invention and certainly not for many a year did recognition come to him. Men of science and captains of industry scoffed at the "useless toy."

As recently as the summer of 1912, De Forest, having already lost two fortunes in ex-

Old-Time Receiver and Dr. De Forest at a Modern Set; Swift Radio Changes of Recent Years

perimental work, was employed as a research engineer of a California company at a small salary. He needed \$125 to save his French patents and went to the president of the company he worked for to borrow this sum. In return, De Forest offered a half interest in his French rights. The president thought it too much of a gamble and, to the despair of the inventor, his French patents reverted to the government. Two years later came the war and the magic tube took its place as the very heart of military communication. Countless bulbs were supplied the allied armies.

De Forest sighs in recalling this. "One million dollars is a conservative estimate of the royalties which would have been paid during the war years, if I had been able to hold on to those French patents," he says. "Unfortunately my friends believed I was only dreaming."

An eminent professor of electrical engineering had thought even less of the ideas of the student, De Forest, years before. The latter graduated from Sheffield scientific school in '96

2196
and spent the next three years in post-graduate work for a doctor's degree. Little heed was given to De Forest's fantastic research.

One night, while he was working in a basement laboratory, the lights suddenly went out in this professor's classroom. He suspected De Forest of having removed the wrong fuse, but could never prove it. Shortly after, however, he found that De Forest had nailed his apparatus to a laboratory table. This was too much. "A student who will spoil a table like that," said the professor, "will never amount to anything."

Much time elapsed between the observing of the Welsbach effect and the actual production of the vacuum tube in 1906. This tube, about the size of an Edison lamp, contained a filament, a grid and a plate and De Forest coined a name for it from "audio," to hear, and "ion," meaning one or more electrons. The three-electrode tube thus became the "audion."

In 1912, the telephone company, seeking to extend its long-distance service, purchased the audion patent rights for \$140,000. In less than two years, they were able to open service across the American continent. Later the same company paid \$250,000 more, for the little lamp had grown from a mere child of imagination to a full-sized servant of mankind. It relayed wireless dots and dashes across the sea and it carried the human voice on telephone wires over the land.

"Now we have all there is under the audion patents," said a leading telephone attorney to a friend of De Forest.

"But not the exclusive right to sell radio sets to the public. De Forest retains that."

"What does that amount to?" cried the other in derision.

True, what did it amount to nine years ago? Broadcasting, actually first done publicly when, on July 15, 1907, the races of the Inter-Lake Yacht association at Put-In-Bay on Lake Erie were reported by radio, was a joke in 1917. Even three years later, on Nov. 2, 1920, when KDKA of East Pittsburgh went on the air as the first regularly established broadcasting station, radio was still something of a joke. The owners of the station had decided there was a future in radio, and had made up fifty sets, and induced fifty wealthy men to spend \$100 each, though the purchasers believed they were throwing their money away.

And of broadcasting, 'way back in 1907, De Forest had said: "Church music, sermons and lectures can be spread abroad by the radio telephone. In the rural districts scores of individual radio-telephone services can be maintained between widely separated farms, ranches, crossroad stores, etc. For the distribution of music, the radio telephone means an enormous increase of patronage among music lovers."

But De Forest visions still greater developments in the next few years.

"Amazing improvement in the quality of reception is a matter of the near future, and it must come," he says. "Instead of many tubes, we may substitute one big tube which will do its work much better. The photo-electric cell may give us television."

"Broadcasting will take on entirely new phases and conceivably the national government may take over all broadcasting of a general or public nature. We shall have radio schools—a whole system of education in which all instruction is given over the radio, and

Another Illustration of Radio's Rapid Development; Changes in Tubes, the "Talking and Listening Lamps," since 1906

Two Pioneer Sets of Apparatus. Yet Each Is But a Few Years Old; at the Left, Dr. De Forest at His Wireless Telephone of 1919 and, at Right, an Audion Hook-Up of Yesterday

we shall have radio newspapers and magazines, and perhaps a radio church.

"Radio telephony and wire telephony will be linked up to a degree which will make it possible for us to listen to broadcasting over our telephone wire, and doubtless plug in a loud speaker on a telephone circuit.

"While it has already made itself indispensable in our daily lives, it is a fact that radio is yet in its merest infancy. The task directly ahead is to improve the speaking and singing voice of radio.

"There is no set today which, with its loud speaker, gives perfect reproduction of music. Every set, and many loud speakers, distort the sound in some way. Designers have been too economical, have sought to make one tube do the work of

two, have tolerated back-feeding—have failed sufficiently to shield the various elements. We must remember this, though, that in radio the extreme sensitiveness essential to true reproduction calls imperatively for good broadcast reception. The loud speaker cannot make up for deficiencies in the receiving set. Here we come to the limitations on the number of tubes which can be used to advantage, and we run into difficulties in the multiplication of tubes which seem likely to be overcome by the use of one large audion equivalent to several smaller ones, with diverse steps of radio-frequency amplification in the same tube.

"Now something about static? Unfortunately man doesn't subdue the forces of nature which he learns to utilize. At least, not in his present stage of development. He doesn't even adapt them; he adapts himself to them.

"Can we conquer static? Probably not, put as baldly as that. At least, not for a very long time. But we can learn its diagnosis, as we have that of lightning, and how to insulate ourselves from it and, somewhat, to keep out of its way.

"To me the delightful thing about radio is that it enters so indispensably into

Early Vacuum Tube Dr. De Forest Developed for Sending Messages; He Called It the Oscillion

modern life. It extends the hearing power of the human ear around the earth, or will do so, to enable anyone to listen to audible sounds anywhere else. Some day in the future man may even go out from his own planet and beyond his own atmosphere and if other planets are inhabited by sentient beings, he and they may find it possible to communicate. But not by radio as we know it today.

"There are far more interesting radio possibilities—and not only possibilities, but certainties—much nearer at hand. For one thing, the range of the human ear is already increased astonishingly by it and will be more so. We hear overtones and undertones we didn't know existed.

"In New York we hear heartbeats in Chicago and the footsteps of a Washington fly walking across a sheet of paper. Radio has long since passed the amusement phase and will go down in history as one of the few revolutionary devices in human progress. Think of listening in on a tiger hunt in India, or an elephant hunt in Africa—on war and all that goes with it—on parliamentary debates and world events of any important kind. All this will come.

"Television we have now, in a way. At

all events, by using the photo-electric cell and boosting its frequency many times higher with the audion tube we can transmit pictures and writing, either by wire or by air. This will become a commonplace in its turn and checks drawn in London or Paris and transmitted by radio will be cashed in New York or San Francisco.

"It is even said that a coronation in the first-named city may be pictured in New York theaters the same evening. Before such a feat is possible, however, coronations may have gone out of fashion. Yet the transmission of still photographs is already by way of being standardized and sending motion pictures is but a matter of working out technical details.

"But is this true television? By that term we really mean the ability ourselves to see over long distances. Not to be shown pictures taken far away, but to actually view the scene itself in Los Angeles while we are in New York.

"Can we ever do so fantastic a thing? Theoretically, it is possible. Commercially and financially, it is impractical. Even so, I can say that there are undreamed of possibilities in radio—possibilities perhaps limitless from any standpoint of human limitations!"

Spring-Wire Coil Holder Prevents Tangling of Aerial Wire during Installation

Spring-Wire Coil Holder Prevents Tangling of Aerial

A wire coil holder that saves winding the wire on a spool and prevents tangling is shown in the illustration. If you have ever climbed to the top of a 60-ft. tree with a tangle of aerial wire hung to every limb and the wind blowing a gale, you will appreciate the usefulness of such a coil holder. The device is simple and easy to make, the construction being indicated in the diagram. It consists of a length of steel wire twisted, as shown, with the idea of making a holder of variable size, so that it will fit coils of different diameters. The wire used should be springy, and as it does not form a complete circle, it will adapt itself to the coil and hold it firmly.—Watson Brown, Iuka, Miss.

What the New Condenser Ratings Mean

A simpler method of giving the rated capacity of condensers is now in general use and marks a third step in the interest of simplicity and efficiency since the old days when manufacturers marked their condenser capacities in relation to the number of plates used. Several years ago a 23-plate variable condenser was understood to be of .0005-mfd. capacity, etc.; then this crude rating gave way to the more exact method of stating the measured capacity regardless of the number of plates. A farad is the unit of capacity, or the ability to store up electrical energy; but it is so large that radio condensers are measured in millionths of it, called a microfarad and indicated by the abbreviation mfd. Now that condensers of still smaller capacity are in general use, such as .0001 mfd., the millionth of a microfarad has been adopted as

the commercial unit and is abbreviated to mmf. Thus .0001 mfd. is equal to 100 mmf.; .00004 mfd. to 40 mmf., and so forth.

Metal Cap Stabilizes Tube

A metal cap, designed to fit over the standard tube, changes the oscillation period to a point where the tube is not affected by vibrations from the set or loud speaker. The method of using the cap is clearly shown in the illustration, and is quite different from the usual de-

vices for eliminating tube vibration. Spring-suspended and rubber-cushioned sockets often eliminate or minimize vibrations, but there are cases where heavy vibrations from machinery and traffic render all efforts useless. For these the metal cap has been designed.

Cheap Homemade Battery Charger

By JOSEPH PAULY

THIS simple battery charger or "booster," made from odds and ends about the average home, costs but \$2.50, is extremely simple to build, and saves many trips to the battery station. It is not intended for large sets that place a heavy drain on the A-battery, as the charging rate is low, but is especially adapted for sets with not more than 5 tubes of the A-type on a 6-volt battery or those employing 199 or similar tubes on a 4-volt storage battery. It is used in the same manner as the well-known trickle chargers now on the market, and can be left connected for long periods without overheating or even getting warm. After having the battery fully charged, the author connected the little charger, placing the battery, on

charge when the set was not in use. The materials required are a small glass jar of the type used for preserving, a bell-ringing transformer of the tapped type, an aluminum pie plate, a strip of lead, two binding posts, a $\frac{1}{4}$ -lb. box of borax and a board, $\frac{1}{2}$ by 6 by 10-in., for the base. The bell-ringing transformer is of the common step-down type tapped for various voltages, usually 6, 12 and 18 volts, and may be obtained from any dealer in electrical supplies. The aluminum and lead plates are $1\frac{1}{2}$ by 7 in. and are bent in the manner shown in the diagram so as to fit over the top of the jar. The former is cut from the pie plate with a pair of tin snips, and the lead plate from a $\frac{1}{16}$ -in. sheet which can be obtained at a plumbing shop. Holes

Materials Required to Build the Battery Charger; at Right, Details of Plate

for the binding posts are drilled in the end of each strip. The step-down transformer is screwed to one end of the base-board and the glass jar is placed at the other, as shown. The jar is held in position by the top of a tin can, to prevent it from shifting about. Dissolve $\frac{1}{4}$ lb. of borax in about 1 pt. of distilled water and let it set. It will be found that a portion of the borax will not dissolve but will remain at the bottom. The clear solution should be poured off, being careful not to disturb the sediment. The sediment is then washed out of the container and the clear solution poured into it until the jar is three-fourths full. Now hang the plates in the jar, in the position shown, and connect the rectifier jar across the transformer to form the cell, using either 12 or 14 volts. The transformer is then plugged into the 110-volt line, the cell-forming process taking about 12 hours.

This forming process is necessary since, up to this point, it will not rectify alter-

nating current; the process converts the cell, which would previously pass current in either direction, into one that will pass current in one direction only. As the cell forms, the aluminum plate will turn light gray where it is exposed to the action of the solution. This coating is an aluminum oxide, insulating the lead from the aluminum plate, when current attempts to pass from the aluminum to the lead plate, but acting as a conductor when the current passes in the reverse direction.

If, after five or six hours of forming, the aluminum plate has not turned to a light gray, but has a dark-slate appearance, the cell has refused to form. There may be one or more reasons for this; first in importance, that the water used for the solution is not properly distilled, second, that the aluminum is not pure, and third, that the plates are not clean. Remove the plates, dry and rub them down with emery cloth to remove any grease or foreign matter; make sure the aluminum, and dis-

Completed Unit Connected to
Storage Battery Ready for
Charging

tilled water used are pure. After the plate is formed, the charger is connected to the storage battery, as shown in the photo. The aluminum plate is always positive and goes to the positive of the storage battery; the negative terminal of the storage battery is taken to the transformer, the other side of the transformer being connected to the lead plate. A little oil on top of the solution will prevent creeping and evaporation,

How Cell Is Connected across the Transformer for the Cell-Forming Process

but the cell requires no further attention. The charger can be left connected to the battery for long periods without heating, and draw practically nothing from the lighting circuit; the charger is for 100-volt, 60-cycle alternating current only, so it is well to see what type of current is available before building the unit. Besides the material already mentioned the only supplies needed are two binding posts, and 5 ft. of ordinary lampcord, with plug.

Re-Marking Radio Dials

Radio dials and lettered binding posts often become darkened and worn, due to constant handling, but they can be made like new with little effort and expense. Obtain a small tube of Chinese white at a painters' supply store. Remove the old white filler from the dial or binding post with a sharp tool, a large darning needle being ideal for this purpose. It is important that the engraving be cleaned out thoroughly before refilling, or the new paint will not stick. Put in the new filler of Chinese white and allow it to set for three minutes. Now hold a piece of cloth flat on a table and rub the post or dial on the cloth to remove the excess filler.—John C. Heberger, Rochester, N. Y.

Efficient Primary for R. F. Transformers

The idea of winding the primary of a r.f. transformer in a slot or groove is not a new one, but it has the advantage of reducing the capacity coupling between the primary and the secondary. The sketch illustrates an easily made winding form for such a primary. Three round disks of $\frac{1}{16}$ -in. bakelite are held together with

two ordinary shoe eyelets. Two of the disks are of the same size, the third and smaller one being placed between the other two. The three are clamped together and drilled for the eyelets, and the latter inserted and clinched over the terminals. The primary, consisting of 15 to 20 turns of No. 32 d.s.c. wire, is wound in the slot; the ends are soldered to the terminals, and the finished coil slipped inside the secondary, whereupon the terminals are connected to the B+ and plate as in-

Cut-Away Section Shows Primary Coil in Position; Right, End View with Primary Terminals

dedicated. The eyelets which are used to hold the plates together should be obtainable at any shoe store. If $\frac{1}{16}$ -in. bakelite is not available, cardboard will serve the purpose practically as well.—Hugh G. Bersie, Chicago, Ill.

EXCEPTIONAL SIMPLICITY is Feature of LATEST SUPERHET

by Frank L. Brittin

AS easy to build as the average 5-tube set, this latest product of Popular Mechanics radio laboratory introduces an entirely new note in modern superheterodyne design. The superiority of this well-known circuit is undisputed; when correctly built, it has invariably proved its right to the title "Rolls-Royce" of radio receivers. Up to the present time, however, it has been necessary for the average superheterodyne builder to follow several hard and fast rules to obtain the remarkable selectivity, tone and range for which the circuit is noted. Without facilities for carefully matching tubes, checking i.f. transformers and proper shielding, no two sets worked exactly alike; some were good and others no better than the average tuned r.f. sets, depending on the skill of the builder and the quality of the materials available.

All hit-and-miss methods are eliminated in this powerful and selective receiver, which employs a specially designed three-stage resistance-coupled unit, making possible the use of any intermediate-frequency best suited for the needs of the individual builder. In the early days of superheterodyne development, resistance-coupled i.f. amplifica-

tion was used with excellent results. This method, however, was used by only a few experts, who, after many experiments, occasionally found just how much drawing ink and graphite from lead-pencil shavings would turn the trick. Today we have highly developed permanent resistor units available for all, and it is no longer necessary to depend on specially peaked and matched transformers nor upon arbitrary frequencies that must be carefully filtered out to obtain maximum results.

For the model described, which, of course, is used in the Chicago territory, a tuned filter peaking at 46 kilocycles was used, as this was found to keep at a minimum the interference due to harmonics from powerful stations in this region. While this frequency may be used in any other territory, it may be found advisable to select a tuned filter peaking at a frequency either above or below 46 kilocycles, depending on the wavelengths of the local stations. This is an easy matter, since the filters are available for any frequency, from 40 to 50 kilocycles. This makes the receiver extremely flexible, and results in greater selectivity, without sacrificing tone quality, and, at the same time, greatly increases range and volume. Perfect inter-

stage amplification, due to the resistance-coupled unit and the use of extra-heavy a.f. transformers, capable of handling both the higher and lower frequencies, makes possible the true reproduction of the living voice. With a suitable

speaker or combination of horn and cone speaker in series, capable of truly reproducing the output of the receiver, each instrument in the orchestra can be heard; the low notes of the bass and kettledrums as well as the high-pitched clarinet and piccolo notes are given their true tonal values. A third transformer of the output type is used between the loud speaker and the output of the power tube; this transformer is designed to keep the direct plate-current of the power tube out of the loud speaker, thus increasing the handling power of the latter several times.

Distance tests during the summer months, usually not considered good for radio reception, resulted in a log of some sixty stations scattered over the east coast, Canada, and southern states. Most of

these stations were logged during severe static disturbances

and many through a barrage of local high-powered stations.

No lengthy construction data are required to build this set as each step is carefully covered in the photos and diagrams. The front-panel template should be carefully laid out on a sheet of bristol board if blueprint templates are not used; the layout of the subpanel is shown below and the holes for the instrument mounting screws indicated. Details of the subpanel mounting brackets are shown below the subpanel layout; it will be noted that strips of bakelite are used to drop the subpanel $\frac{3}{16}$ in. below the top of the outside brackets to make room for the aluminum "can" or shield above the subpanel.

The oscillator unit is completely isolated

in this aluminum can, shown in the photo at the right. This can may be obtained with most of the holes drilled and ready for use; the top and bottom are removable, the base of the can is screwed to the subpanel and the tube socket and universal socket for the plug-in coupler unit mounted in the position shown. Three short lengths of brass tubing furnished with the unit are used to elevate the coupler socket about $\frac{1}{2}$ in. above the base of the can. The tube socket is mounted directly on the can base or can be slightly raised on bakelite strips if desired. The .006-mfd. fixed condenser is mounted on the base of the can directly in front of the coupler unit under the oscillator condenser, one side screwed to the can for the A-negative connection and spaced by an extra brass nut, as shown in the detailed diagram. The other side of this fixed condenser does not touch the can and is provided with a soldering lug and connected to the No. 6 post on the coupler-unit socket. Holes are drilled in the can base and subpanel near each terminal of the tube socket and coupler-unit socket, all leads to these terminals being taken below the subpanel and insulated from the can with short lengths of good black spaghetti tubing.

Next assemble all instruments on the front panel except the oscillator condenser and screw the front panel temporarily in place on the outside subpanel brackets. When assembled, the front edge of the can base should be against the front panel. Place the sides of the can in position in the base and line up the condenser mounting holes on the front of the can. After drilling the holes in the can, enlarge the hole for the condenser shaft so no metal will come in contact with the shaft when the condenser is in position. When completely assembled and the lid in position, this aluminum can effectually shields this usually "touchy" part of the circuit. The oscillator condenser, top and sides of the can are then left off the assembly until all the wiring is completed, the last two wires from the oscillator condenser to the coupler terminals 4 and 5 being added after the can is finally assembled. The subpanel layout shows each instrument above the subpanel in its proper position; the only instruments below the subpanel being the r.f. choke coil, by-pass condensers and filament control ballasts shown in the large wiring diagram and indicated by

dotted lines. The ballasts are all below except the one for the first detector tube; a single brass machine screw holds each ballast mounting in position on the subpanel, and the choke coil is held in position with a short brass machine screw at each end, as indicated. These ballasts are $\frac{1}{4}$ amp. each, except the one for the power tube MU-6 in the last a.f. tube socket; this ballast must be of the $\frac{1}{2}$ -amp. type. The MU-6 tube used has a 6-volt filament, and, while the ballast indicated is not necessary for this tube, it is installed so that other types of tubes may be substituted, if desired, in the second a.f. stage. Three MU-20 tubes must be used in the resistance-coupled unit; therefore the 6-volt filament supply line is taken directly to this unit.

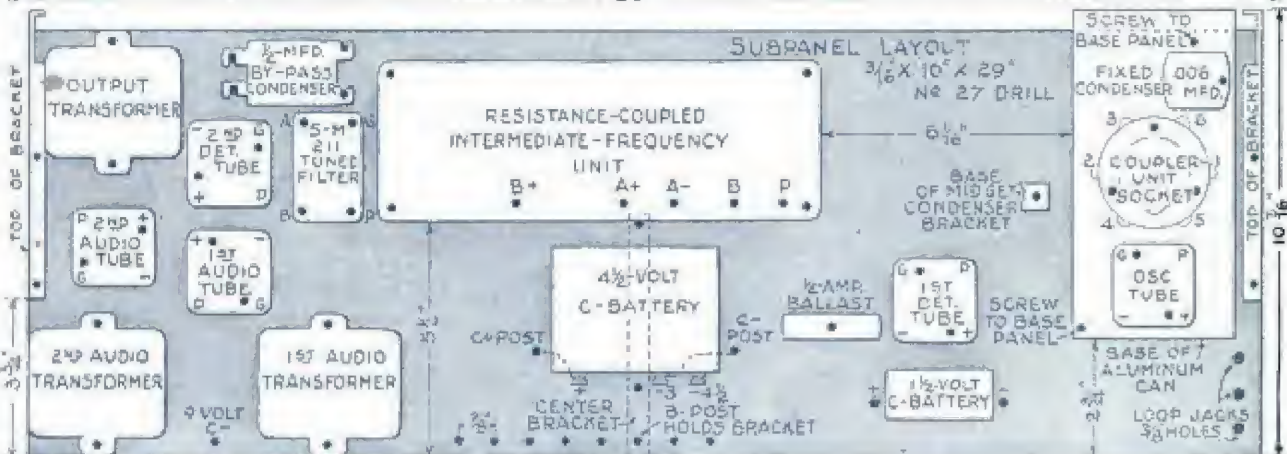

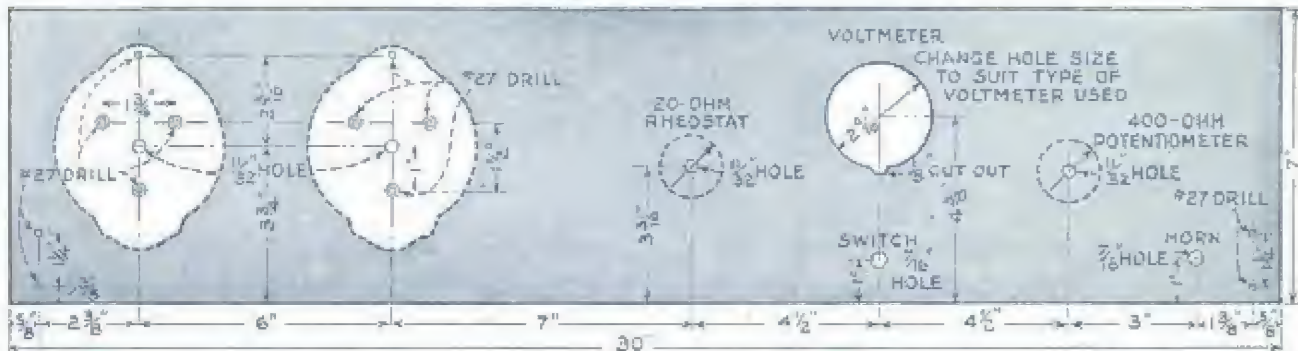

There are a few slight changes necessary in the resistance-coupled unit to facilitate wiring under the subpanel, and these changes must be made before this unit is mounted in its position. Six small C-battery posts will be noted on the upper front edge of the unit; these posts are connected together on the underside of the unit with short metal strips. Remove these strips and replace the nuts as you found them; soldering lugs are then placed under the three binding posts located on the top of the unit at the end of each resistor marked 1.M and connected

together with a short length of busbar wire as shown in the wiring diagram. The remaining three C-battery posts nearest each tube have no external connection on this side of the unit.

Referring to the subpanel layout, note the holes drilled in the subpanel and marked respectively P, B, A-negative, A-positive and B-positive; these holes are directly below the corresponding posts of the unit when it is in position. Carefully remove the corresponding binding posts on the unit and replace them with five $1\frac{1}{2}$ -in. brass machine screws; leaving the connecting strips on the underside of the unit just as they were and screwing up hexagon brass nuts to hold the strips firmly in place. Posts B-negative and "output" B are not disturbed, and no external connection is taken to them; these posts are marked "open" in the wiring diagram. The "output" P-post is not disturbed and carries the only external connection on this side of the unit, namely the output of the unit to the P-post of the filter. The unit is now ready for mounting on the subpanel and before mounting it see that all terminals are tight; the long screws at the four corners hold the unit in position. Additional brass nuts are placed on the long screws that replaced the binding posts and are now protruding through to the underside of the subpanel; soldering lugs

MATERIAL LIST

- | | |
|--|---|
| 1 front panel, 3-16 by 7 by 30 in. | 3 $4\frac{1}{2}$ -volt C-batteries, large, tapped type. |
| 1 subpanel, 3-16 by 10 by 29 in. | 1 $1\frac{1}{2}$ -volt single cell, C-battery, large type. |
| 2 strips bakelite, 3-16 by $\frac{1}{2}$ by 5 in. | 3 45-volt B-battery units, heavy-duty type. |
| 1 strip bakelite, 3-16 by $\frac{1}{2}$ by 2 in. | 1 gridleak, 2 meg. |
| 1 Daven 3-stage super-amplifier unit, type 3-R. | 1 gridleak, .1 meg., with mounting clips. |
| 3 Daven $\frac{1}{4}$ -amp. ballasts, complete with No. 50 mountings. | 1 400-ohm potentiometer, Frost, Yaxley, Centralab, or similar type. |
| 1 Daven $\frac{1}{2}$ -amp. ballast, with No. 50 mounting. | 1 20-ohm rheostat. |
| 3 Daven MU-20 tubes. | 1 jack, open-circuit type. |
| 1 Daven MU-6 power tube. | 1 push-pull filament switch. |
| 4 201-A tubes. | 11 binding posts, with engraved tops. |
| 1 S-M plug-in-coupler unit, type 110-A. | 3 Sangamo fixed condensers, .0025 mfd. |
| 1 S-M universal socket, type 315. | 1 Sangamo fixed condenser, .0005 mfd., with grid-leak clips. |
| 1 S-M tuned air-core filter, type 211 (available for any frequency between 40 and 50 kilocycles) any of which may be used. | 1 Sangamo fixed condenser, .006 mfd. |
| 2 S-M a.f. transformers, type 220. | 1 by-pass condenser, $\frac{1}{2}$ mfd., Sangamo, Dubilier or Tobe-Deutschmann. |
| 1 S-M output transformer, type 221. | 8 doz. soldering lugs, long, round-hole type. |
| 1 S-M aluminum shield, type 631, for oscillator unit. | 10 2-ft. lengths, round, tinned-copper busbar wire, |
| 2 Remler capacity units, .0005 mfd., type 631. | 4 lengths black spaghetti tubing. |
| 1 Jewell or Hoyt A and B voltmeter, double range, 0-7.5 and 0-150 volts. | 2 ft. stranded, flexible, rubber-covered fixture wire. |
| 5 standard spring-suspended sockets, Benjamin or similar type. | 12 6-32 brass machine screws, $1\frac{1}{2}$ in. long, round head. |
| 3 cord-tip plugs and jacks. | 18 6-32 brass machine screws, 1 in. long, round head. |
| 2 Benjamin subpanel brackets. | 20 6-32 brass machine screws, $\frac{1}{2}$ in. long, round head. |
| 1 Samson r.f. choke coil. | 7 6-32 brass machine screws, $\frac{1}{2}$ in. long, round head, nickelplated. |
| 2 National velvet-vernier dials, type B, dual range. | 20-in. strip brass, 1-16 by $\frac{1}{2}$ in., for brackets. |
| 1 midjet condenser, Chelton or S-M, low-loss type. | |
| 1 three-tap, loop aerial, box type preferred. | |

FRONT-PANEL TEMPLATE
 $\frac{3}{16} \times 7 \times 30$ 

are then fastened to them with additional brass nuts. Note that the brass center bracket carries the common A and B-negative line, the A-negative line being completed through the push-pull filament switch.

Wire the circuit just as shown in the large wiring diagram, placing soldering lugs under all terminals; never solder directly to any instrument. Soldering lugs should be fastened to the fixed condensers by means of two short brass machine screws. Use a good grade of spaghetti tubing over any leads under the subpanel that would be likely to touch and cause a short. After the wiring is completed, connect all the batteries just as shown in the wiring diagram and turn on the filament

Above, Panel Template and Subpanel Layout; Below, Bracket Details and Photo of Oscillator Unit with Top of Can Removed

switch; place one tube successively in each socket to test out the filament circuit; if all right, all tubes may then be placed in their respective sockets. The loop used should be of the three-tap box type and can be placed anywhere convenient to the set, keeping the leads reasonably short; the center loop lead is plugged into the center loop jack, the outside leads in the outside jacks. To test out the set, plug in the coupler coil

and place the rotor of the coupler at an angle of about 45° , replacing the lid of the can firmly so that it will not vibrate; plug in the loud speaker and turn on the filament switch. Turn the rheostat well over to the right, and keep the potentiometer as far to the left as possible for the first test. Slight changes in the rheostat and potentiometer settings will be required but the approximate positions are as given. To pick up a station, slowly rotate the dials in step, never tuning them independently when locating a station. When the signal is heard at good volume, leave the oscillator dial as it is and readjust the wavelength dial a few points on either side of the oscillator setting to bring the signal in at maximum strength. Now adjust the midget condenser to the point that gives the loudest and clearest signals. Once found, this adjustment need not be changed.

For these first tests, which should be made when local stations are on the air, it is well to keep the B-battery voltage to the plates of the oscillator and detector tubes on both $22\frac{1}{2}$ -volt posts, and the resistance-coupled unit on 90 volts just as shown on the large wiring diagram. Later, as you become more familiar with the instrument, raise both $22\frac{1}{2}$ -volt B-battery connections to 45 volts and the 90-volt connection to $112\frac{1}{2}$ volts. This B-battery arrangement will necessitate a more critical rheostat adjustment on the oscillator tube, but will bring out the full possibilities of the instrument. The arrangement of the tubes should not be changed except that the new 200-A or 300-A detector tubes may be used if desired. The first a.f. amplifier tube may be either a 201-A or a power type, but if a power tube is used, the ballast and negative grid bias must be changed to suit the tube specifications. Ample volume is obtained with the 201-A tube; therefore, it is recommended for the first a.f. stage. The .1-M resistor, clipped across the filament and grid posts of this socket is necessary

regardless of the type of tube to be used.

Popular Mechanics radio laboratory has made every effort to make this set as simple to build as possible; all details have been carefully checked, and a set of enlarged blueprints of the wiring diagram, schematic diagram, full-size drilling templates, as well as additional photos of the subpanel layout and under-subpanel wiring have been prepared. The complete set may be obtained from Popular Mechanics Radio department, 200 E. Ontario st., Chicago, Ill., for 75 cents. Specify blueprint No. 114.

Rotary Radio Meter Has Five Ranges

Rotary Radio Meter, Showing Terminals Numbered for Five Ranges

Combining five ranges, a new radio meter of rotary design has appeared on the market. It can be used for all testing on receivers, tubes, batteries, battery chargers and battery eliminators. The meter is mounted on a mahogany block, and is turned by a knurled rim to the five different positions, registering with each of the binding posts through a series of segments within the base block. The No. 1 post is the positive

terminal used for all measurements; No. 2 is the 7.5-volt scale, for testing tubes, filament voltages, and A-battery voltages; No. 3 is the 150-volt scale, for measuring plate voltages on tubes, and of B-batteries and B-eliminators; No. 4 is the 15 milamp. scale, for obtaining the plate current on single to three-tube sets, and for testing tubes; No. 5 is for the 75-milamp. scale for testing the plate current of large sets of four or more tubes or power amplifiers, and outputs of B-eliminators. The No. 6 post is for the 7.5-amp. scale for measuring the current taken by tube filaments, singly or in sets, and for charging A-batteries. Wiring diagrams are supplied with the meter for checking battery eliminators, coils and transformers.

Any Electrical Instrument Worker

Making a "Tumbling Teddy"

By E. R. HAAN

THE toy described in this article is very simple to make, but will provide endless amusement for the youngsters. No special tools, other than those to be found around the average home, are needed for its construction; a scroll or coping saw is useful for cutting out the figure of "Teddy" himself, but, in the absence of this tool, the figure can quite easily be cut with a knife, if a little care is used in the operation.

The ladder is the first thing to make. This is formed from two lengths of $\frac{3}{8}$ by $\frac{3}{8}$ -in. wood, 24 in. long, with eight rungs of $\frac{1}{8}$ by $1\frac{1}{2}$ -in. stuff, each $2\frac{1}{4}$ in. long, spaced exactly $2\frac{7}{8}$ in. apart. The rungs are fastened to the sides of the ladder with common pins and glue, leaving one off at one end temporarily. On each end of the ladder is fastened a base, consisting of a block of wood, 4 in. square and 1 in. thick. As will be noted, the end of the ladder sides are set in inclined slots cut in the base blocks, glued, and fastened with round-headed brass screws. When joined to the bases, the ladder is not exactly vertical, but inclines 1 in. for every 10 in. of its length. The ladder can be made in any length desired; there is no need to stick to the 24-in. size of the original, but, in case it is made longer, the bases must be made longer also, so as to keep the toy stable. For a very long ladder, it would be best to fit one base and leave the upper end of the ladder open, but this means that the figure must be lifted from the bottom to the top every time.

Here Is "Tumbling Teddy,"
an Acrobatic Clown That Will Amuse
the Youngsters for Hours at a Time

Details of the Figure of Teddy; the Holes and the Slots Must Be Exactly in the Center of the Clown

it tumbles down, while with a base at each end the whole ladder is simply reversed, and Teddy then tumbles to the other end of the ladder.

The figure of Teddy is $3\frac{1}{8}$ in. long, from the tip of the upraised hands to the bottom of the "feet." The figure is cut out of $\frac{3}{4}$ in. stock, preferably with a scrollsaw, as mentioned previously. The exact width of the figure is not so important, but in the original the width at the widest part, on a line across the shoulders, is 1 in., at the waist $\frac{5}{8}$ in. and the hips $\frac{7}{8}$ in. Exactly in the center of the thickness of the figure, and $\frac{3}{4}$ in. from the ends, two $\frac{3}{8}$ -in. holes are drilled through, and $\frac{5}{32}$ -in. slots cut from these to the ends. It is important that the holes and slots be exactly in the center of the figure, else Teddy will not perform properly. The inner edges of the slots are rounded off as indicated in the detail drawing. When finished, the figure is placed on the ladder at the place where the rung was left off, and this rung then pinned and glued in.

Now, if the ladder is placed upright, with the figure at the top, Teddy will gracefully tumble down the ladder to the bottom, when the whole toy is reversed and the operation repeated. It may sometimes be found necessary to trim a little from the sides of the slots so that the figure can swing freely, and tumble down without a stop from top to bottom, but a little experiment will soon put it in first-class shape. The toy, of course, may be decorated in any manner desired.

Making Bicycle Tires Unleakable

Any bicycle tire that has a few small holes in it and is not worn down much, can be repaired easily so that it can be used until the rubber wears through. The tire is taken from the wheel and a small slit, about 6 or 8 in. long, is cut in it in the inside edge, as indicated. Next a supply of corks, a little smaller than the diameter of the tire, is procured. Corks cost almost nothing, so enough of

them can be bought for a few cents. The slit is pulled open and the corks are inserted into the tire, care being taken to keep them straight. They can be pushed entirely around the tire with a piece of rubber hose so as to make them fit tight.

After the tire is completely filled with corks, the section of the tire where the slit was cut can be tightly taped to keep the tire intact. The tire is then replaced and glued with rubber cement. This repair will be found very good.—Wilson G. Walters, Rochester, N. Y.

Compressed Air Cleaning Away Mush Ice

The successful winter operation of a hydroelectric plant was menaced by the entrance of mush ice into the penstock. This plant incurred considerable expense by the building of a series of screens designed to keep the ice out. But the ice continued to form and choked the screens. These were discarded in favor of a steam line to melt the ice before it could enter. This method also proved unsatisfactory. A visitor at the plant suggested the use of compressed air. A very small compressor was installed and the air piped to a point below the intake where, when released, the air would bubble up to the surface of the water. The thousands of little bubbles kept the entering water in such turmoil that ice could not form over it.—Sherwood J. Gee, Montpelier, Idaho.

Sharpening the Razor

Take a clean, bright piece of $\frac{1}{2}$ -in. lead pipe and rub it over the razor strop a few times. Then strop your razor, and you will find how quickly it will be sharpened. I have been doing this for 15 years and have never found it necessary to hone my razor.—H. A. Barwick, Montreal, Can.

Fence Post Pulls Auto Out of Mud Hole

Due to the differential action of the rear wheels of an automobile it is often a difficult job to get out of a mud hole, as most drivers have experienced. However, by fastening a fence post, or any post of suitable size, to the rear wheels, as illustrated, it is a comparatively easy job to get out of the mud. The post should be tied to the wheels under the driveshaft and removed when it reaches the back of the fenders.—Art. Hellberg, McGregor, Iowa.

Get Your Car Out of a Mud Hole with the Aid of a Fence Post

Cords Hanging in Barn Doorway Remove Flies from Cattle as They Enter

Barn-Door Fly Chaser

Observing that most of the flies that troubled his cows at milking time were carried into the barn from the pastures by the animals themselves, a Wisconsin farmer made the fly chaser shown in the illustration, and reduced the annoyance to a great extent. Across the door from the yard to the barn a bar was placed at a height of 7 ft. and from this was suspended a curtain of twine strands, which hung to within $2\frac{1}{2}$ ft. of the ground. As the cows entered the barn through this door, in single file, the curtain brushed across their backs and sides and dislodged the flies, allowing the animals to enter the barn practically free from them. By keeping the interior of the barn darkened the milking then could proceed without much trouble.

☛Mirrors and picture glasses should be cleaned with a pad of tissue paper sprinkled with methylated spirits.

Build Your Own Ship Model

By J. EARLE MILLER

BUILDING one of the ship models which have attained such favor for interior decoration is a simple task, once the secret of the carving of the hull has been mastered. This job has scared many prospective model builders, but by the "bread and butter" method used by professional model makers the hull is, in fact, the easiest and simplest part to make.

This is the story of the building of a model of Hendrick Hudson's "Half Moon," one of four model ships recently constructed in the Popular Mechanics experimental shop. While no authentic plans of the actual "Half Moon" exist, this model represents what the ship must have been like, according to contemporary accounts and plans.

To start with, the builder will need four 2 ft.

lengths of $\frac{7}{16}$ -in. net white pine, 10 in. wide and free from knots; a cigar box or two for thinner wood; a dozen lengths of

round dowel stock, equally divided between the $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$ and $\frac{3}{8}$ -in. sizes, to make the masts, yards, bowsprit and flag-pole. The dowel stock can be obtained from a hardware store and the white pine, which should be well seasoned and dried, from a lumber dealer.

Above, the Rough Hull Ready for Carving to Shape; Upper Left, Gluing the Lifts Together; Note How the Sawed Boards Show the Shape of the Hull Lines

The templates represent the "bread and butter" method lines as taken from the blueprints, and are one-quarter the size of the actual boards. In this system, the hull is reduced to a series of flat boards or "lifts," which are glued together and then carved down with draw and spokeshaves, chisels and files. As the

inner edge, where each two lifts meet, represents the hull line at that point, it is only necessary to carve off the projecting corners. The carving of this hull was completed in less than an hour.

The hull templates, as given, were laid out for lifts $\frac{3}{16}$ in. thick, which happened to be the size on hand. Take a large sheet of drawing or heavy wrapping paper and lay it out in 1-in. squares. Using one of the horizontal lines as a center, lay off the full-size half-template according to the squares given for line No. 1. Then fold the paper along the center line and cut both thicknesses at the same time. Unfold, and you have the full template for the first plank below the finished deck. Follow

The tools needed include a coping saw, a drawshave and spokeshave, flat chisels and gouges, several flat, half-round and round files, a wood-carver's knife, or, in its stead, a strong, sharp jackknife, a gluepot and supply of a good grade of glue, two or three large clamps and a half dozen of the small metal clamps sold in the dime stores.

Blueprints for this, and a wide range of other ships, are sold at prices ranging from \$2.50 to \$10 a set, depending upon their completeness. A full set of five prints purchased from a model designer for this ship costs \$10, but the ship can be built without the use of prints by laying out the hull from the templates given.

the same process for the other eight lifts in the hull, and for the shorter pieces of the poop and forecastle (fo'c'sle). The rounded ends of the templates are the bow ends. The templates are then laid on the pine boards, marked, and are then ready for sawing. The bow or stern ends of each piece should be indicated, and the center marks at bow and stern transferred from the templates to the wood. The lifts are then sawed out with the coping saw, and are ready for gluing, after the center lines have been marked down one face and both ends.

Start with lift No. 1, coat it with glue on the side bearing the center mark, and coat the unmarked side of lift No. 2; place the two glued surfaces together and line them up by the center marks. As No. 1 is the first lift under the deck line, you are building the hull from the deck down to the keel, so that the center lines will be face up, and as the lifts get smaller toward the keel, each succeeding one can be lined up by the end marks. At the stern the templates have all been

continued to the same length, and the ends are lined up vertically as the gluing proceeds, while the bow ends get progressively shorter, simplifying the later carving of the stem. When plank 9 has been

glued in place, clamp the entire hull tight and set it aside for twenty-four hours. While it is setting, the laminations of the poop and quarterdeck and the forecastle can be glued together in the same way and placed in clamps or a vise.

After the glue has set, the forecastle and stern superstructures are glued to the main hull and held in place with the large clamps. Like the hull parts, the pieces of the poop and

quarterdeck are cut to line up at the stern, and, in gluing, they are centered in the same way as the hull parts. In assembling the stern superstructure to the hull the upper works project over the stern $1\frac{1}{8}$ in. to take care of the extreme rake of the stern, which is sawed out later. After the stern sections are glued and clamped in place a line is drawn across the deck $8\frac{1}{2}$ in. forward from the front end of the lower

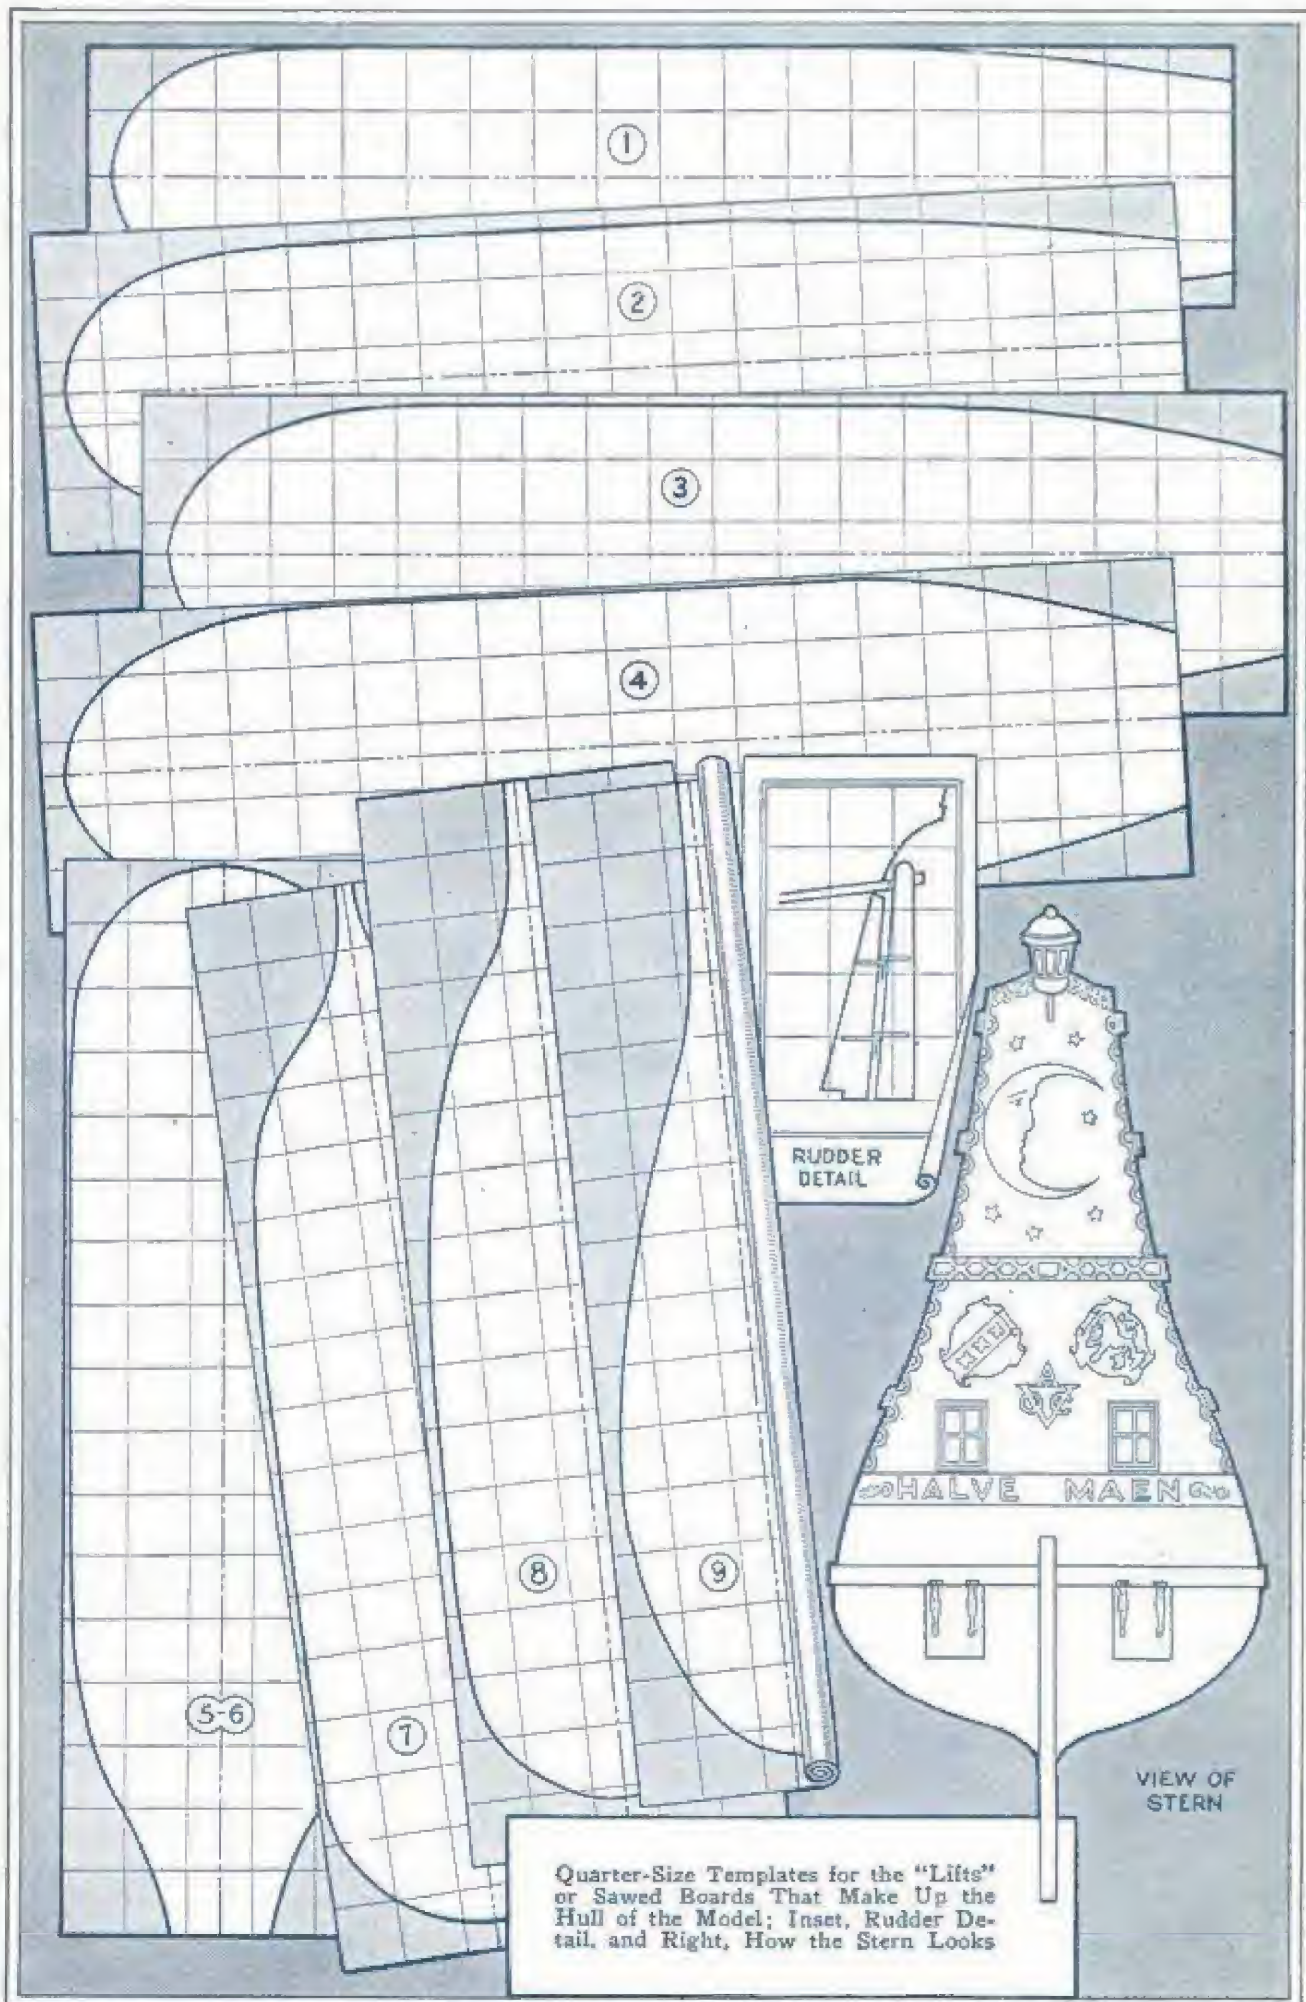

lamination of the quarterdeck, and the forecastle glued on, with its rear edge on this line. The completely assembled hull and superstructure, ready to start carving, is shown in the photograph on page 669. The first step is to saw

View of the Completed "Half Moon" Model, Fitted with Sails

Side Elevation of Rough Hull, Showing How the Stern Rake Is Sawed

FO'C'SLE TEMPLATES

Details of Making and Using Templates, Marking Out Lifts from Templates, and Sawing Them Out

the rake of the stern. Draw a line down the side from the extreme rear of the top-most plank in the poopdeck, to the point where the superstructure meets the main hull. Next mark a point $1\frac{7}{8}$ in. from the stern end on the keel plank, and a second point $3\frac{1}{8}$ in. up from the bottom of the keel plank and $\frac{3}{4}$ in. in from the stern, and connect this point with the one on the keel

plank. From the upper point draw a $\frac{3}{4}$ -in. arc, and then, with hand and coping saws, saw out the stern rake. Next shave off the last inch or two of the hull down to the stern lines. With that much completed, it is easy to shave off the projecting edges of the remainder of the hull until the rounded lines are completed.

(To Be Continued)

Mounted Photographs Set on Imitation Rock Base

Anyone who has tried to cut out and mount enlarged snapshots on wood has made the discovery that, unless both feet are together and in the same plane, one leg will be shorter than the other and none of the usual methods of attaching them to the base can be applied. The difficulty can be overcome by carving an imitation boulder from a block of soft pine, with a ledge on which the rear foot rests, so that the figure appears to be stepping down from the rock. First cut out the base, which may be square or round, about $\frac{5}{8}$ or $\frac{3}{4}$ in. in thickness. If a lathe is available, an attractive base can be turned in a few moments. Lay a piece of 1-in. soft pine on the base, with its front edge $\frac{3}{4}$ in. back from the edge of the base block, and, with a pencil, lay out an irregular-shaped piece, slightly smaller than the base block and forming about three-fourths of a circle. Cut it out with a coping saw, and then, holding the mounted photo against the straight surface at the front of the block, mark the outlines of the feet. With a small gouge or knife cut recesses for the feet to a depth of about $\frac{1}{4}$ in., sloping them slightly back at the top so that when the figure is glued in place, it will lean backward about five degrees. Take a piece of wood about 1 in. wide, nail the block to it and clamp in a vise. This holds the block firmly and leaves it free for carving. Use small chisels or gouges to cut away the material, sloping the imitation rock down to the edges, and leaving as many gouge marks as possible, as, the rougher the rock is, the better it will appear when finished. Nail or glue the completed carving to the base, and glue the figure in place. A good finish can be obtained by lacquering the edges of the base black and giving the rock and visible portions of the top surface of the base a heavy coat of bronze. After the bronze dries, paint it over with a green vernis-martin lacquer, and before

Imitation Rock Base for Mounted Photos Solves the Problem of Mounting Them

this has quite set, wipe off most of the green with a rag, leaving it showing in the cracks and recesses. The back and edges of the board on which the photo is mounted can be bronzed and treated in the same way.—J. Earle Miller, Chicago, Ill.

Keeping Shoes Tied

Children often run around with loose shoe strings, which looks untidy and is also a source of danger. A good method of making the knot stay-tied is shown in the photo. Both ends are run through the same top eye and the lace is then tied in the usual way. It will be found that this knot will not loosen.

Of course, the string should not be so long that the loose ends will reach the ground.

You Can Make These Pine-Cone Novelties

By F. W. WEST

ATTRACTIVE or grotesque birds and other novelties can easily be made from pine cones by anyone possessing a little skill and ingenuity. Besides the cones, all the material needed is some sticks, twigs, feathers and paint. No particular sizes are given, as they must depend on the size of the cones and upon the effect one wishes to obtain.

A general idea of the birds may be obtained from the headpiece, and Figs. 5, 6, 7, 8, 9 and 10, which show the details. The heads are most easily made from small forked pieces, which should be at least 1 in. in diameter after the bark is removed. The painting may be done with oil paint, water colors or lacquer. The latter is easily applied and dries quickly. Two brushes are needed, one a No. 1 camel's-hair brush for the eyes and for striping, and a No. 3 brush for the other work. The eyes should be painted first, preferably black. Fill in with green around them, as indicated in Fig. 8. Next paint the top of the head, using red. The light part of the beak is yellow. Then, with the small brush, make a black stripe down the sides of the beak to divide the lower and upper part. The appearance can be improved by separating each color with a stripe of black. White pine or other soft wood is most suitable for the legs and feet.

To assemble the birds, attach the legs to the cone first. Take two small twigs of any length and size desired, shave one end of each down thin (Fig. 9) and apply a little glue. Then insert the legs between the scales near the stem end and, after the glue has set, trim the legs to the desired length, shaving off the lower end to fit in holes drilled in the feet, which should be about $\frac{1}{4}$ in. thick, and attach with glue. To fasten the head, drill a small hole in the stem end of the cone, shave the end of the neck to fit and attach it with glue. Finally glue a small feather to each side of the cone to represent wings, and one or two feathers in the end for a tail, and the bird is complete.

The turtle (Figs. 1 to 4) should be made from a well-formed cone with the scales at the stem end intact. This end is cut off and forms the back shell. Drill a small hole through the center where the stem was removed. The under shell, Fig. 3, is cut from $\frac{1}{4}$ -in. wood, just large enough so that the back covers it. The hole in the center is the same size as the hole in the back. Paint the beak and the eyes olive and black, respectively, and the other parts of the head and neck to match the natural color of the shell. The assembling is easy. The legs and tail are scales taken from another cone and are attached with

glue and a small brad or pin, as indicated. The head is fastened in the same way. To joint the back and bottom shell, use a small wooden dowel or pin, fitting tightly in the holes in these parts. Fasten with glue, squeezing or clamping them until the glue has set. Then trim the dowel flush with the bottom and back, and paint the ends the same color as the head. This completes the turtle.

Artificial flowers made from cone parts are shown in Fig. 11. To make them, cut the cones in two pieces of about equal length. For larger flowers remove a few of the fore-most scales, leaving bare a portion of the core of the cone. Shape this to resemble

the center of a flower, and drill a small hole to attach the stem. Smaller flowers are made similarly from the bare end of the core, drilled for the stem, which is made from small wire, preferably pipe-stem cleaners. The leaves are made of detached scales and are glued on.

For the butterfly (Fig. 12), trace the design on durable paper, attach with glue two or more scales for the body, and make the wings with scales overlapping like shingles on a roof, as indicated. Paint to suit yourself, and after the paint is dry, tear or cut away the surplus paper. The underside of the wings should be covered with silk or crepe paper, attached with glue that will not stain the material. The tendrils and legs are made of pipe-stem cleaners. Flowers and butterflies may be painted to suit your own fancy.

The cat (Figs. 13 to 20) requires two well-formed cones with all the scales intact. The cones should be equal in diameter, but one slightly longer than the

other. The former makes the forepart of the cat's body. Cut both cones as shown in Fig. 13, and drill holes through the parts in the center to receive a piece of insulated wire with the webbing removed. To join the parts of the body, bend the wire as required to give the humped effect, apply glue to this and to the cut-off

ends of the cones, run the wire through the cones and hold them together with a rubber band or piece of twine until the glue has set. If you want a longer body, two more cones may be cut off in the same way as the turtle shell and attached one to each end of the body, gluing in additional scales where needed. For the head, select

a small cone, cut off the three or four fore-most scales and drill a hole in the stem end to receive the protruding end of the wire. Fill and cover the entire open part of the cone with plaster of paris (preferred), furnace cement or putty, and form a flat surface for the mouth on the small end (Fig. 15). Smooth and shape the plastered surface with a putty knife or wooden paddle. If furnace cement is used, dip the putty knife or paddle frequently in cold water. Putty works very nicely if it is warmed before being applied. The head may also be made of wood if desired. The teeth and lips are made of scales, as indicated. The legs (Fig. 18) are formed from sticks and may be straight or slightly crooked, the hind legs a little longer than the fore legs. Match and trim to the length required. Shave the top end to fit between the scales on the body and cut a small, round tenon on the bottom end (Fig. 18) to fit the hole in the foot (Fig. 19). Use $\frac{1}{4}$ -in. wood for the feet.

Build them up with plaster of paris, as at C. For the tail (Fig. 22) use the large ends of three or more cones with the scales cut down so that only a small portion remains to give a bristly effect.

Glue the ears and teeth in place. For the neck, use a short section of cone with the scales left on, but if any of them interfere with getting the legs in place, these may be split or removed. To attach the tail, cut the insulated wire flush with the top end, apply glue to the protruding wire on the other end and insert the tail as shown. The best way to paint the cat is to dip it or pour the paint over it, black being the most suitable color. After this is dry, paint the teeth white, the lips and mouth red, the eyes black and white, and the nose white. A scale or a small round-headed peg will serve for the latter. To attach the whiskers, made of bristles, drill holes with a needle, apply glue to the ends and insert them.

The parrot with its perch (Figs. 23 to 28) is a little more elaborate than the other birds, but after trying your hand on those, you will have small difficulty in making it and need but little description to guide you.

The feet and legs are made of pipe cleaners, four pieces being twisted together for the legs (Fig. 25) and the ends left loose to form the toes, cut as indicated by the dotted lines to make a pair. The base is cut from a $\frac{1}{2}$ -in. board about 4 in. in diameter. The upright is a $\frac{3}{16}$ -in. metal rod, 24 to 30 in. long, and bent to the shape shown. The ring should be at least $3\frac{1}{2}$ in. in diameter. The link supporting the ring may be a piece of small chain, or a ribbon may be used. The wings and tail should be made of scales and are dipped in red enamel or lacquer. The assembly is readily understood from the drawings.

The savage (Figs. 29 to 37) is also a good figure to make. The eyes are painted

on, or tacks having large, flat heads may be used instead. The facial wrinkles may be cut or painted in. The upper part of the body is made from the stem ends of two cones, cut off and joined with wire or with a small, round stick. To make the lower part of the body, cut the small end out of a cone, and remove all but four tiers of the mid-section scales (Fig. 32). Drill a hole through the center to receive the long end of the wire protruding from the upper part of the body. The piece in Fig. 33, used to attach the legs to the body, is cut from thin wood and small enough to be entirely covered by the lower part of

the body. The center hole in this piece receives the wire protruding from the lower part of the body, and the outer ones the legs. The latter (Fig. 34) have small tenons to fit in these holes and in holes in the feet, to which small scales are attached for toes. The arms and hands are whittled from small, crooked limbs. The club and the hand holding it are made in one piece. Each arm is made separately with a small tenon on the end to attach it to the hand. Assemble the parts with glue and paint them black, the eyes white, and black, the lips and teeth white, and the inner part of the mouth red.

Trace-Chain Cover Prevents Chafing

To guard against chafing of the horses' flanks, a western farmer took old bicycle tires, cut them in two and slipped the trace chain inside of them as

shown in the drawing. This not only prevents pain, but hushes the noise of the chain as well.—Dale R. Van Horn, Walton, Nebr.

Remedy for Soot-Choked Stovepipes

Where there are several lengths of stovepipe extending from the stove to the chimney there is a tendency for the stove to choke up and allow the smoke to enter the room. This is especially true of stoves burning soft coal. It is not always convenient to remove the pipes, but the trouble must be remedied at once for it is dangerous to let the coal gas escape. A quick remedy that will work at least until it is possible to clean the pipes thoroughly, is to start the fire going at a good rate and, when it is burning brightly, throw in a handful of powdered sulphur. Allow this to burn for a few moments and then throw in a cupful of water which will cause considerable steam. Then close all

the dampers; this will force the soot out of the pipe. Another method is to use paraffin or tallow candles on the coals instead of the sulphur, throwing the water on the coals after the wax has melted.

Method of Starting Nails

When a nail is to be driven at some point so high that it cannot be held conveniently for starting, one of the two methods illustrated may be used successfully. Either the nail is wedged between the claws of the hammer with the head resting firmly against the latter, as shown in the upper figure, or it can be held between the fingers, letting the head rest against the hammer handle as shown in the lower figure.—W. C. Ratcliffe, Tannersville, Va.

Connecting Auto Stop Light

If the switch controlling the auto stop light sticks, the battery will run down in a short time. To avoid this, I connected mine to the ignition switch instead of to the ammeter. Thus it will not light except when the motor is running.—Preston J. Cheu, Millville, N. J.

Overcoming Troubles in Replacing Windshield Glass

Trouble is often experienced when replacing the lower glass in two-piece double ventilating windshields, which are used on many Ford cars. Glass of standard size is found too wide, and is so high, when in the frame, that the rubber weather strip cannot be used between the pieces of glass. The trouble usually originates from rain causing rust under the brass channel that holds the glass. The rust can be dug out with a sharp screwdriver after pulling out the brass channel. This must be done carefully, however, as the brass is easily bent out of shape. It can be removed by grasping the roll edge with a pair of pliers and pulling up. If the channel is sprung together so that the glass cannot enter, it can be straightened with a flat stick of wood of the same thickness as the glass, the end of which is pressed into the groove and pushed along in it. Another place for rust is in the groove on the underside of the frame, which fits over a strip on the dash. Rust here will hold up the whole windshield frame, but it can be easily scraped out.—E. T. Gunderson, Humboldt, Iowa.

Self-Cleaning Device for Cistern

To make a cistern self-cleaning, provide a length of conductor pipe and an elbow and connect them to the overflow pipe as shown in the drawing, taking care to cement the joint so that there will be no leak. When the water rises above the level of the overflow pipe it will be drained off, but, instead of the surface water running off, the water on the floor will be forced out and with it the dirt that has settled at the bottom. It takes only an hour to install the pipe, and it will keep the cistern water clean, provided, of course, there is enough rainfall to cause the cistern to overflow.—Joe Lauth, Pontiac, Ill.

How to Keep Your Cistern Clean Automatically with a Length of Conductor Pipe

Corner on Porch Provides Large Cage for Canaries and Gives Them More Freedom

Winter Bird House on Porch

Birds flying through the trees are one of the greatest delights of my garden and the one which I missed most keenly during the winter months. The sun porch was resortlike even in January with blossoming cyclamen, gorgeous cactus and ferns, and I determined to provide a winter resort for my canaries. I screened in the corner of the porch, provided swinging perches and a tin tray full of sand for a floor. The birds were then turned loose in it and showed their appreciation of their

spacious home with warbles, chirps and trills. They require no more care than one bird. The front section of the screen can be raised like a window sash so that the sand may be changed and water and food provided. During the winter the radiator keeps the porch warm, and

with all the windows open in the summer the canaries seem to almost believe they are outdoors.—Mrs. Ruth Laughlin Barker, Santa Fe, New Mex.

How to Make a Porch Lamp

Attractive Hand-Wrought Porch Light That Can Readily Be Made by the Home Mechanic

Novelty and usefulness are the features of the sheet-metal porch lamp shown in the illustration, which anyone handy with tools can easily make at a cost of less than \$1.50. The glass shade consists of a colored bottle cut to form a cylinder. Use a file to nick the side of the bottle. Sheet copper will be found most convenient to work with. It is soft, so that it is easily bent or hammered to any shape. It is bent upward at one end to form the base for the shade holder, which is riveted on. A disk at each end of the shade, to close it, and lengths of copper rod or tubing, to connect the disks, form the shade holder. To make the upper disk convex use a ball-peen hammer on a concave wooden anvil. If desired, the whole surface can be hammered to give it a hand-wrought appearance, and this finish can be preserved by applying some transparent lacquer over it when completed. It should

be noted that while the rods that hold the lower lamp disk and ring to the base are riveted, the rods connecting the upper and lower rings are simply inserted in holes so that they can be removed for cleaning the glass or renewal of the lamp.—G. A. Luers, Washington, D. C.

Starting Kink for Auto

In some of the earlier ignition systems, the starting current is so great that the coil cannot draw its full share. Also, when a modern engine is stiff or the battery is weak, a full voltage is not available for the coil. In nearly all of these systems there is a small resistance coil in series with the spark coil, the function of which is to heat up and cut down the current if the motor is stopped with the switch on. Shorting out part of the resistance coil will send a greater current through the coil. Connect the center of the resistance to either end through a convenient horn button. Solder should be used in tapping the coil. Use heavy, twisted lampcord, and a horn button with good contact points. Press the button only while the starter is operating.

Ash Stand That Cannot Upset

A smokers' ash tray, which can be tilted to any angle without upsetting, is shown in the illustration. The base consists of a 4-in. copper ball, which is half filled with lead. A slight depression is made in the bottom to make it stand steady. The column is a piece of $\frac{3}{4}$ -in. brass tubing soldered to the ball and of any convenient length. To the top of the tube a medium-sized ash receiver is soldered. The entire stand can be nickel-plated or enameled and decorated with Egyptian characters.—L. C. Ferguson, Ontario, Calif.

Ash Stand, with Heavy Ball Base Containing Lead, Will Not Upset

A Cabin Scow Driven by Auto Engine

THE conversion of automobile engines into power plants for marine purposes has always been a moot question. In this

tact but the transmission was changed. This originally had a four-to-one reverse ratio and this was too slow. The reverse idler was removed; the gears within the transmission were removed and a combination was selected which gave the reverse a two-to-one ratio. The gear selected for this position was mounted on the transmission jack shaft, which is the lower one. Only one of the sliding gears was used on the

Old Auto Engine Installed on Large Cabin Scow Furnishes Its Power and Gives a Speed of Eight Miles

instance, such an installation was found entirely satisfactory. The engine first was overhauled and new bearings and piston rings were provided throughout.

For the cooling system, the old centrifugal pump was discarded and a $\frac{1}{2}$ -in. gear pump took its place. This had a two-way valve arrangement so that the bilge water could be pumped out. A small metal dash was built and mounted at the transmission to engine joint. On this dash the vacuum tank, oil gauge, ammeter, trouble light, ignition switch and controls were mounted. The starting switch with the automatic cut-out was mounted on the crankcase, where it is convenient to the foot. A length of $1\frac{1}{2}$ -in. iron pipe was used for the legs, and the mounting of the engine in the hull was thus greatly facilitated. The clutch and transmission assembly was used, the clutch being left in-

transmission shaft and this was arranged to be shifted into mesh with the little reverse gear. This gear with its mounting had to be provided with a new mounting on the side of the transmission case and this meant raising it and bringing it out a little to accommodate the gears it meshed with. A cast-iron block between the mounting and the case did the trick. Instead of four gears or speed changes in the transmission, there were now but two, direct forward and two-to-one in reverse.

The clutch is shifted by means of the brake lever, which was bent and mounted so as to throw the clutch out when the operator lifts on the bent portion of the

handle. The drive of the boat is through the standard universal connection and a short length of propeller shaft, to the flange joint shown, and then on, through the propeller shaft, to the wheel. At this point a most interesting departure was made from some of the old-line construction practices. It was decided to take the thrust of the propeller on the transmission case through the short length of torque tube which was used from the original car installation. This torque tube was fitted into the ball-and-socket joint on the transmission. Between this ball-and-socket joint and the flange joint was placed a collar, which was the housing for the tapered roller-bearing race, mounted within it. The inner race or cone was mounted on the short length of propeller shaft. This takes the forward thrust from the propeller. The rear thrust, as in reverse, is taken by a small ball bearing,

similar to those used beside the differentials to take the ring-gear thrust. This arrangement was placed ahead of the collar and within the torque tube. Of course, the shaft must be provided with the proper collars and forms for fitting the universal at the front, the bearings in the center and the flange at the rear.

This job was installed in a 28 by 8-ft. cabin scow. The first trip was a cruise of about 300 miles from Cincinnati to the Kentucky river and up that tributary and return. The speed of the boat is about 8 miles an hour but this can be raised quite a little on occasion. Last fall this boat won third place in the cabin-scow race at Cincinnati. The engine was not touched during the season's use and this extended well into the fall months. When taken down a short time ago, everything was found to be in perfect condition.—Ray F. Kuns, Cincinnati, Ohio.

Hand-Wrought Colonial Latch

Colonial finish on doors and gates is not complete until fittings such as hinges and latches are made to match. The illustration gives all details necessary for the construction of such a latch. It is of the lift type and consists of a plate and the latch. About $\frac{1}{8}$ -in. iron plate is used and the handle can be made of a $\frac{1}{4}$ -in. iron strip. The catch is made of $\frac{3}{16}$ -in. material. To give the surface the old wrought appearance, heat it and then hammer on an anvil. The edges are flanged to give

depth and rigidity. The handle and latch are cut to shape, the former being heated and bent at the lower part. Holes are drilled and rivets driven in. After riveting, the upper section is bent back to form a comfortable grip. The catch is cut to shape, the holes are drilled and the catch end squared off. The retainer for the latch is a scrap of base plate. A loose hinge rivet and the rivets for the retainer are then put in. In some cases it is necessary to operate the latch from the opposite side of the door. The method of accomplishing this is shown, the second handle being made of the

Antique Appearance of Doors Is Increased by Fitting Them with Homemade Colonial Door Latches

same material as the lift. The thumb lift is of $\frac{3}{16}$ -in. plate and should be made long enough to pass through the gate and provide at least $\frac{1}{2}$ -in. engagement with the latch. The latch plate must, of course, be slotted to clear the movement of the thumb lift.—G. A. Luers, Washington, D. C.

Vacuum Cleaner for Dusting Fruit

Last summer at picking time we had many dust storms, which coated our fruit with dust, detracting considerably from its appearance when packed for the market. To overcome this trouble we tried blowing the dust off with a vacuum cleaner and found this method very effective.—Mrs. M. W. Annis, Shafter, Calif.

Tight Joints in Rubber Tubing

In joining two lengths of rubber hose, it is not good practice to stretch them over a piece of brass tubing that is slightly larger in the inside diameter than the hose, as the joint will leak after the rubber stretches. Get a short length of brass tubing the same diameter as the inside

diameter of the rubber and wind four or five turns of No. 22 copper wire around each end, sweating it in place. This can be done by means of a small alcohol lamp, which can be obtained at almost any hardware store. This collar of wire should be about $\frac{1}{4}$ in. from the end of the tube so that the rubber tubing can be slipped on more easily. After the rubber tubing is forced over the collar, twist a wire around the end, as indicated in the illustration. You will then have a good coupling, which will not leak and, if used to convey air, will easily stand a pressure of 80 lb. per sq. in.

☐ A fountain for the lawn can be provided by inverting a flowerpot and pushing the hose nozzle up through the hole. This fountain can be moved about by yanking the hose and without wetting the feet.

Spring Hooks Hold Cows' Tails

A Wisconsin dairyman, whose barn is equipped with the most modern conveniences in every respect, conceived the idea of providing, at each stanchion, the chain-suspended spring hooks shown in the drawing, to prevent the cows from switching their tails

about while being milked. The chains are attached to the left side of each stanchion and can be easily and quickly attached or detached by the dairyman.

Bellows Blow Carbon from Cylinders

Garages equipped with a compressed-air outfit can easily dispose of carbon dust when grinding valves by blowing the dust out. Where compressed air is not available, the mechanic usually blows it out with the mouth, getting his face full of carbon and his lungs choked as a result. The illustration shows how a local repair

man, doing a one-man business, makes use of a pair of old-fashioned bellows for this purpose. He keeps them in the tool kit at all times, and when scraping carbon or doing any job that collects dirt and dust on the work, he blows everything clean with a stroke or two of the bellows.—L. B. Robbins, Harwich, Mass.

Rake Cleans Lawn Thoroughly

My father had me rake up a dirty lawn. When I got through I had only gathered up half the stuff. I had a rubber band in my pocket and by slipping it on the coarse-toothed garden rake, the small bits

that would otherwise slip through were caught easily. The band is slipped over and under the teeth a short distance above the edges as shown.—Walter Brown, West Brattleboro, Vt.

Holder for Medicine Dropper

When medicine is to be measured carefully, it is annoying to find the dropper has been mislaid or broken among other bottles or containers in the medicine chest. To make it convenient and safe from breakage, a Wisconsin doctor places a label of double thickness on the bottle, attaching it so as to form a pocket, as shown in the illustration. The double label makes the pocket strong enough to prevent tearing and the dropper is always convenient for use.

Smoke Locates Leaks in a Roof

Instead of waiting through several rainstorms to locate all the leaks that may be suspected in a roof, they can be determined all at once in this manner: Close all windows and doors and plug up any opening that can be seen in the top of the building. Make a fire in a large kettle or iron washtub and place it on the attic floor under the roof. A good fire for this

purpose must be a sort of smudge, which will give off plenty of smoke. It may be of punky, wet wood, or pieces of cedar bark twisted together, dampened and then laid over a small, hot fire in the center of the receptacle. Where plenty of straw is available, throw some wet straw on the fire. When the smoke is thick, go up on the roof and you will see small spirals issuing from every leaky place in the roof. Chalk such spots and then mend the roof before the next rainstorm, and it is safe to assume that you will have a tight roof. The smudge will also help to eliminate all kinds of insect pests.—L. B. Robbins, Harwich, Mass.

Mending Tissue Made from Rubber-Tube Cement

Mending tissue used for holding together small breaks or tears in clothing can be easily made from ordinary rubber-tire cement. All that is necessary is to flow the cement upon a waxed or oily paper. It can be made as heavy as desired, and, when dry, can readily be peeled off the paper. In use, it is placed on the underside of the cloth and a hot iron is applied, with a piece of clean cloth between the iron and the rubber to act as a protection and to hold the edges of the break together.—B. Murray, Sturgis, Mich.

Cleaning Shotgun Barrels

Being at a loss to find a suitable rod and brush to clean the barrel of a rusty shotgun, I procured a length of No. 10 gauge wire, which I doubled and bent as shown in the drawing. By placing a small quantity of steel wool in the open fork of the rod and latching the ends together by

means of the hook provided, I made a cleaning rod that did the work in a most practical manner. The construction of a rod of this

kind also has the advantage that the worn wool can be removed instantly, and new wool substituted as quickly.—G. E. Hendrickson, Argyle, Wis.

Blowtorch Made from Gasoline Lamp

By L. B. ROBBINS

MANY modern gasoline and kerosene lamps operate on the principle of the plumber's blowtorch, the gasoline in the fount being projected into the burner in the form of vapor, where it is ignited and consumed in flame. A lamp of this type can be converted into a useful soldering outfit as shown in the illustrations. As the fount holds $1\frac{1}{2}$ qt. of gasoline and

the burner is small, one filling of fuel will last a long time.

First remove the air chamber at the top of the lamp, the mantles and the generator. Leave the vertical air-intake tube standing. Saw off the generator about 3 in. above the locknut and force the shredded asbestos out of the tube. Then replace it and attach a length of thick-walled rub-

Novel Soldering Torch, Made from a Discarded Gasoline Lamp, Is Useful for All Kinds of Small Jobs and Can Easily Be Made in the Home Workshop

ber tubing, wiring this on. A few turns of stiff wire near the metal tube will prevent the tubing from kinking at this point.

Construction Details and Assembly of the Blowtorch

Straighten out a second generator in the vise so no kinks are left. Saw off the spread end, reverse the direction of the locknut and push it up near the tip. Then drill a hole, the size of the tube, lengthwise through a wooden tool handle and drive the tube through it, leaving a couple of inches projecting to which the rubber tubing should be wired. Get a piece of thick-walled brass tubing, about 3 in. long and with an inside diameter that can be tapped to take the generator locknut. Drill several small holes through this tube in the unthreaded end as indicated. A heavy spoon, with a wide shank, should be fashioned as shown and a hole drilled in the handle of such size that the generator tube will be a force fit in it, while leaving sufficient material outside to cover the end of the large tube completely. Now assemble the parts. The generator tip should rest about a third way down the length of the perforated tube, the spoon shank should bear against the threaded end of the tube, and the locknut should be screwed up tightly against it. If the generator tends to slip or air spaces show, fill these with hard solder. The top end of the spoon shank is bent to form a hook so that the burner can be hung up.

To start the outfit, pump air into the lamp fount, burn a little gasoline in the

spoon to heat the tube, turn on the gas valve and light the burner. If the tip is in the right position in the burner tube and the holes properly placed you will get a nice blue flame, hot enough for any light soldering. Experimenting in enlarging the hole in the tip and in varying its distance from the burner end will get you the best results. When found, a drop of solder will hold it permanently in position.

Assembling Bendix Drive on Ford Starter

When assembling the bendix drive on a Ford starting motor, take care to see that the stop nut or bearing, which enters the mounting bracket on the starting motor, is not too tight, and that the bearing is in proper alinement with the bracket. The bearing should be oiled and then fitted so that it can be readily turned with the fingers. If the bearing is too tight, dress it down with an oilstone, as too tight a fit will cause the bearing to freeze to the bracket, which will result in serious damage to the starter.

Planks Keep Trench Openings Smooth

Keeping pavements smooth at trench openings, where the pavement cannot be relaid until the back filling has settled properly, and where the tires of passing vehicles keep pulling out the backfill, has been solved in one city by placing planks in the trench. Two or more 3-in. planks, wide enough to fit the opening in the pavement and cut to the proper length, are placed in the opening, the backfill being graded so that the plank surfaces are flush with the top of the pavement. The planks are lifted out at intervals and more backfill is added as the trench settles.

Planks Used to Cover Trench Openings in Pavements

How to Braze Band Saws

The proper way to braze band saws is to make a lap joint by beveling the ends for a distance equal to about two teeth. The blade is clamped so that the ends overlap in the center of the clamp. After applying a little powdered borax in the lap, a small piece of silver solder, about the size of the braze, is inserted. Heat the brazing tongs to a red heat and press them against the joint firmly, holding them there until the tongs cool to a dull red. The tongs are then slid back and forth along the blade a few times to insure a uniform braze. Then the cooled joint is carefully filed down to a uniform thickness.—William C. Thomas, Chicago, Ill.

Brace Keeps Heavy Posts Upright While Tamping

When he had to set a number of heavy fence posts in concrete, a mid-west farmer found the task seemingly impossible without the aid of an assistant to hold each post perpendicular while the concrete was poured and tamped into the hole around the post. As help

was not available, he devised the simple brace shown in the drawing. A length of $\frac{1}{2}$ -in. round iron was bent to the shape of a horseshoe with loops at each end and one at the center. To each of these loops a pointed standard of the same material was attached, the points being bent slightly inward. To support a post set in the hole the brace is placed as indicated and the hook points of the three standards are forced into the sides. The post is safely and securely held in this position and the operator is free to tamp the cement and gravel around it. If made in a larger size, the same kind of support could be used to brace telephone poles as very little support is necessary to hold a pole in position when it is once erect.

Grooved Roller for Glaziers

To simplify the application of putty to window sash, a Wisconsin glazier devised the illustrated grooved roller. The putty is placed on the mixing board and rolled out to the desired thickness, after which it is cut into V-shaped strips with the roller. A strip, 8 or 10 in. in length, is used each time and can then be smoothed on more readily

than when applied with a putty knife.—G. E. Hendrickson, Argyle, Wis.

Cutting Holes in Thin Sheet Copper

Having occasion to cut a large circular hole in a tank of thin copper and having no tool on hand for this purpose, the one shown in the illustration was improvised in a few minutes and found entirely satisfactory. All that is needed is a drill and bit, a machinists' C-clamp, two short pieces of wood and an old hacksaw blade. These parts are assembled as shown in the illustration, the center hole first being drilled so that the drill fits in it and serves as a center. A cut is made in the end of one of the blocks of wood to hold the saw blade securely. The teeth prevent it from sliding up in use when the pressure of the clamp is applied and the grooves on the drill keep it from turning in the blocks when the device is used. The jaws of the C-clamp must be placed between the drill and the saw blade.—W. N. Lurcott, Weehawken, N. J.

Letter returned

Lathe Rigged Up for Use as Rotary Metal Shears

Nearly every day the average small machine shop that depends on rapid production for work and profits has need for a device that will cut a piece of sheet

Rotary Shears Run by Lathe or Milling Machine Are Useful for Small Shops

metal of medium gauge. We were recently called upon to make four ventilators using about 20-gauge sheet iron. As we had no tools except ordinary hand snips, and I knew that the job would be a tiresome one, I did some figuring, which resulted in the rotary shears shown in the drawing.

The outfit consists of two circular cutters, each of which is mounted on a suitable shaft and is partly knurled to grip the metal while cutting it. The device is set up in a lathe or milling machine and one man can easily operate it. The upper cutter is made of tool steel, turned down to 3 in. in diameter, and has a 1-in. hole to fit on an arbor to which the cutter is keyed. The smooth part is $3\frac{1}{4}$ in. in diameter. I did not grind the cutter, as we were in a hurry, but it was hardened in oil. Do not forget to undercut it as shown, or you will be unable to sharpen it. The lower cutter is turned to 3 in. in diameter, but only three-fourths of the face is knurled. It is held in place and rotates on a stud driven into an angle-iron bracket, which in turn is clamped down securely. When assembling the device, care should be taken to bring the rolls together firmly but not tight in a horizontal direction. One-half the thickness to be cut is

the proper space between the knurled parts of the cutters. The lower cutter should, of course, be lined directly under the upper cutter. In using the shears no pressure is required to follow the line. It took about three hours to make them, and they saved considerable time.—Omar Fluharty, Sciotoville, Ohio.

Simple Method of Protecting Railroad Ties against Fire

One of the hazards troubling the railroads is firing of ties, piled along the tracks, by sparks from passing locomotives. Those made from fat pine, which are desirable for their lasting qualities, or those treated with creosote to prolong their life, are very easily ignited. A roadway supervisor has adopted a successful plan of preventing these fires by covering the piles with a 4-in. layer of earth which is jammed down tightly, so that no cracks are left between the ties. Any projecting ends of ties at the sides of the piles are similarly protected, a shovelful or so of earth on each piece being sufficient to give ample security against fire.—L. M. Jordan, Newton, Ala.

Handy Ladder Support

Getting the ladder out of the shop or putting it back is much simplified by using the device shown in the drawing.

A wire is stretched from one end of the shop to the other and a pulley is placed on the wire with a hook heavy enough to hold the pulley vertically. When the ladder is withdrawn the pulley and hook will be at the en-

trance of the building where the ladder may be hung on and pushed back in place readily.—F. E. Poister, Morrill, Kans.

Removable One-Man Truck Body

A wrecking company in San Francisco has equipped one of their lumber trucks with a removable body for hauling bricks

bent to form hooks. These catch the rear roller, holding the body in the position shown. When this has been done the driver slowly backs up until the empty body stands vertically on end and the

Special Body Built by a Wrecking Company for Hauling Brick; It Can Instantly Be Removed or Attached to Truck by One Man

because the limited extent of their trade in this commodity did not warrant the expense of a special truck for this purpose. There are two rollers provided on the bed of the truck to facilitate moving the body. To remove the body from the truck, the rear roller is turned by means of a bar until the body is moved to the position shown in photo No. 1. The rear end is lowered to the ground, as shown in photo No. 2, but the body is kept from slipping off the truck by means of two steel straps

truck is ready to be used for hauling lumber. In placing the body on the truck again, the driver backs the truck up to the body, which is standing vertically, pushes the body over, until it strikes the roller on the rear of the truck, then drives forward until the roller on the rear engages with the two steel straps. Now he can easily lift the rear end of the body and push it forward on the rollers. All the operations are easily and quickly performed by one man.—C. W. Geiger, San Francisco, Calif.

Graduating a Six-Foot Scale in the Lathe

A small jobbing shop had only a lathe, drill press and shaper. A tailor brought in a piece of brass, 7 ft. long, 2 in. wide and $\frac{1}{8}$ in. thick. He wanted a 6-ft. length of this marked in $\frac{1}{8}$ -in. graduations to be used for measuring cloth. We first fastened the brass with screws to a piece of machine steel, $7\frac{1}{2}$ ft. long and $1\frac{1}{2}$ in. square. This was placed in the lathe, as shown, and an indicator was used

Graduating a 6-ft. Metal Scale in the Lathe for Use as Tailor's Measure

to line it up on the top and side. The 1-ft. graduations were measured off with an ordinary scale, and the 1-in. and the $\frac{1}{8}$ -in. graduations with a 1-in. and $\frac{1}{8}$ -in. length of steel, used between the edge of the carriage and a clamp stop on the bed. The cross slide and the scribing tool shown in the upper detail were used to do the marking. This method, of course, will not make a precision scale but the job was quite sufficiently accurate to serve the tailor's requirements. — C. Moran, Philadelphia, Pa.

Spring Clamp Facilitates Laying Out of Blocks in Pairs

In cases where it is necessary to mark off a large number of blocks in pairs, the

Spring Clamp Facilitates Marking Off Blocks by Handling Two at a Time

spring clamp shown in the illustration has been found to be of considerable assistance. The clamp is made of two pieces of $\frac{3}{16}$ -in. wire held together by a coil spring as shown. The tendency of the spring to straighten out holds the clamp tightly against the work. One wire is bent at right angles and looped around to inclose the other, in order to keep both in line opposite each other.—Harry Moore, Montreal, Can.

Felt Washer Protects Painted Surface

will go through the work suddenly and the handle will strike the work. On gears, valve cages or wristpin bushings, where the teeth may be marred, the valve seat

bruised or the face of the piston scratched, such a leather or felt washer put between the tool and the work will prevent this objectionable bruising.—G. A. Luers, Washington, D. C.

Set Your Own Wagon Tires

Wooden carriage and wagon wheels often lose so much of the natural moisture in spokes, hubs and especially the felloes that the steel tires become loose, and the wheel is soon ruined if used in that condition. Instead of taking it to the blacksmith, soak the wood parts in water until the tire is tight and the wheel, when tapped, gives the sound of solidity. Now, the important thing is to make this setting last at least one season, and this is done with oil or paint as follows: As soon as the wheels are surface-dry, give the wood a coat of kerosene, and again let it, too, become surface-dry. This allows the oil or paint to penetrate deeply enough to hold, as keeping moisture in the wood depends on a cover of paint or oil. Now apply a good wagon paint, or linseed oil of which one-third is drier.—Louis Murback, Poultney, Vt.

Device for Changing Spring Shackles on Ford Cars

When fitting new spring shackles and bushings on a Ford, either on account of wear or failure altogether, do not jack up the body to take the weight off the springs. They can easily be changed by using a C-clamp of suitable size and a strip of hardwood, say, 1 by 2 by 8 in. in dimensions, and clamping it in position, as shown, recessing it to fit over the oiler in the spring perch to avoid damage to the oiler. Screwing up on the clamp will cause the shackle bolts to slip out. With the usual type of coil-spring shock absorbers, a clamp can be used without a wooden strip.—C. S. Bartless, Dallas, Tex.

Portable and Collapsible Tool Table

Mechanics often carry their tools along to a job and when they get there they may have to work for long periods on their knees or standing on a stepladder. Where several tools are used, convenience and a considerable saving of time can be accomplished by having the tools at all times readily accessible on a small portable and collapsible tool table of the kind shown. It is adjustable to any range of height up to the worker's head, and the top revolves, so that any tool can be brought within easy reach. The

music stand, which can be obtained for a few dollars. With the iron rod deep in the stem and

Collapsible Workbench, Which Is Light in Weight and Can Readily Be Carried in the Tool Chest, Facilitates Work of a Mechanic

table is durable and exceedingly light, and can be carried in a tool box, when collapsed. It is made from an ordinary metal

the legs folded upward against the stem, it makes a neat bundle, about 2 ft. in length, weighing less than 4 lb. The flat top consists of two semi-circular pieces of heavy sheet metal, hinged together and reinforced underneath by light wooden ribs, as shown. A hole in the center of these ribs fits over the upper end of the stand.

The table can be adjusted to any height from 18 to 60 inches.—P. C. Grose, McComb, Ohio.

Welders' V-Blocks

Most welding shops possess some kind of V-block arrangement for lining up broken shafts, rods, etc., or butt-welding pipes and tubes, but the one shown in the drawing has a few advantages not commonly known. In the first place the lining-up member is well away from the heat of the torch, and is not underneath the work as in ordinary extension V-blocks, where it soon becomes scaled and difficult to move. Secondly, there is no limit to the length

to which the vees can be extended. As no machinery is required to make a pair of these blocks, smaller repair shops can adopt them profitably. Take a piece of $\frac{1}{4}$ or $\frac{3}{8}$ -in. flat stock, bend it to the double V-shape shown and then cut the piece in half. In use, the work to be welded is laid in the vees on one side and any suitable piece of round stock is laid in the others to line them up. The alining rod should be placed in the vees first and these slid in or out until the two portions of the pieces to be welded are balanced.

☞ A good auto-top dressing consists of 2 lb. lampblack in oil, 1 gal. pure boiled linseed oil and 1 pt. pure turpentine, with a small amount of drier.

Glass for a Surface Plate

The other day I needed a surface plate; something that would be fairly accurate. I looked over the workshop but could find nothing that would answer the purpose. Precision surface plates are expensive and for the little use we have for them yearly, it really does not pay a farmer to buy one. I needed the surface plate badly and had about given up when I happened to think of a broken windshield which we had left from an auto accident. We never dreamed that it would be of any use whatever, but, while it was not perfect, it served as a dandy surface plate and will answer for pretty fine jobs in any farm or other workshop. In going over the matter with a mechanic recently, he decided to get one for himself after he had examined it.—H. W. Swope, Danville, Pa.

Protection against Corrosion of Battery Terminals

On automobiles where battery terminals are subject to considerable corrosion, it is a good idea to tin the terminals. This can be done best by dipping them in melted solder or lead up to

the insulation on the cables. The clamp screws and nuts should also be tinned. A method of doing this, which has been found practical and satisfactory, is to melt the solder or tin in a ladle and then dip the terminal in it, as shown.

Belt-Saving Trick

A great saving can be made in a shop where there are many belts, if the following method is used: When the belts are to be laced, punch out holes large enough to insert eyelets in the holes. It will be found that the holes, especially in rubber belting, will not become worn so quickly.

Washing Parts in Gasoline

In the garage or machine shop, when engine or machine parts are placed in a pan of gasoline to be cleaned, the liquid often becomes so dirty that it is difficult to locate the pieces when wanted. To overcome this, one mechanic employs the novel drain table shown in the illustration. A disk, somewhat smaller than the diameter of the pan top, is cut from a piece of heavy tin, leaving projections or ears at four points. A circular hole is cut out of the center of the disk and the ears are bent over the edge of the pan to hold it. Parts are placed upon this drain table where they may be readily brushed and cleaned with gasoline and left there until the surplus gasoline has drained off.—G. E. Hendrickson, Argyle, Wis.

Printers' Emergency Furniture

It sometimes happens in printing offices that there is no metal furniture of the required size. This makes it necessary to resort to numerous emergency methods, the most usual of which consists in filling up the space with lead slugs. The drawing shows a convenient and simple method of filling large spaces by making furniture of the proper size from pieces of rule or slugs. Pieces of the proper length to fill the space are cut and notched on a saw trimmer, which is found in nearly every plant. These notched pieces are put together and then placed in the space to be filled, as shown in the illustration.—A. C. Cole, Chicago, Ill.

Safety Guard on Power-Line Poles

illustration. This was found to discourage the children from using the poles for climbing.

Cutting a Radius Corner

Cutting a corner on a given radius is something many machinists consider impossible without the liberal use of a file, and this is more or less difficult where a high degree of accuracy is involved. A good method of accomplishing this job with ease is shown in the drawing. The edge of the cutter is first ground to produce a radius about one-tenth smaller than the finished radius of the piece. This

will make the actual radius of the tool even smaller on account of the angle at which the upper surface of the tool is tipped. With the shape of the corner roughed out with other tools, begin to use the special cutter on one side, then on the opposite side, and then at the center, shifting the tool as soon as more than one-third to one-half of its lip starts to cut. This work is done best with the

Children frequently climb telephone and power-line poles and serious accidents have often resulted from contact with live wires. To prevent this, the Louisville Gas and Electric company provided guards made of sheet metal and attached these to the poles, as shown in the

power shut off and the belt operated by hand. The result of cutting in this manner is to remove a fine chip of metal at each cut, which eliminates chattering as the tool never gets a grip on much metal. A series of small shallow ridges will be left, but these are so slight that they disappear after a few light strokes with a fine file. The completed job will be well finished and accurate. It is also possible, with this method, to merge the arc of the corner exactly with adjoining surfaces.

Electric Alarm Indicates Unwound Clock

One of the janitor's duties in a large manufacturing plant is to see that the master clock is kept wound and running on time each day. After several lapses of memory, when he allowed the clock to run down, he devised the following simple method of warning when the spring was nearing the end of its operating power. He drilled two holes in the side of the case, one near the bottom and the other directly opposite the side of the spring. An insulated electric wire was run through the lower hole and bolted to the metal frame of the clockwork. The top hole was reamed out just large enough so that a spark-plug porcelain could be forced tightly through it. This porcelain was connected to a second wire and the wires were connected to a battery and doorbell in series. The contact point in the porcelain was adjusted a certain distance from the spring so that, when it was nearly uncoiled, it would touch the point and close the circuit, ringing the bell.

☛ To make a battery box acid-proof, melt 8 parts of wood tar and 14 parts rosin in an iron kettle, then stir in 10 parts fine brick dust; apply solution warm after the box has been cleaned and sandpapered.

V-Block Centering Device

One of the quickest methods of marking the center of short lengths of round work is to use the handy V-block attachment

shown in the drawing. It consists of three pieces: a block having a "V" cut on two opposite sides; a length of rod fitting in the bottom "V" and bent over so that when put in place the end slips into a hole drilled in one end of the block; a length of the same-size rod pivoted to the end of the first piece, and a scriber, made of flat stock, pivoted on the end of the link. Any size of work can be marked off and a further advantage is that the work need not be square on the end, as the scriber readily accommodates itself to irregular surfaces. In use, the scriber is moved downward and the shaft turned and marked in two or more places, the point of intersection being the center.—Harry Moore, Montreal, Can.

Hulling and Scarifying Clover Seed

We have grown our own sweet-clover seed for several years and thresh it with our grain thresher. It does not hull the seed, but this work and the scarifying are done in one operation in the following way: A quantity of coarse, sharp sand or gravel is obtained; this is dried, and then run through a fanning mill so that all sand particles smaller than a clover seed are screened out. A bushful of the coarse gravel, which passes through the fanning mill, is placed in a barrel-type concrete mixer and a bushful of the unhulled clover seed is put in with it. The two are tumbled together for about 15

minutes. Both are passed through the fanning mill with a screen that will allow the clover seed to screen from the gravel. The wind blast removes the loosened hulls and the seed is clean and well scarified by the scratching the sharp gravel gives it.—Wendell N. Mitchell, Rogers, Nebr.

When to Paint Vacuum Equipment

New pipes or cylinders in which a vacuum is to be maintained should not be painted until after the plant is set in operation and a vacuum is being maintained within the parts. The reason is that all metal is more or less porous, and when it is new, it allows leakage. If painted before using, the thin coating on the outside soon gives way. It should be painted while in use with a thin-mixed paint as this allows the pores to become filled, and the result will be a very noticeable increase in the vacuum.

Trailer Carries Concrete Mixer

Having a number of widely scattered jobs to do, a western construction company built a heavy trailer for one of its trucks to carry a big concrete mixer, in order to transport it faster than it could travel on its own power. Four wheels with solid rubber tires were used. They were put on axles fastened to a triangular framework of iron beams, a small beam being placed at the front end to keep the mixer from running onto the wheels at this end, which were very close together. Iron plates were used as a runway, and the mixer

Large Concrete Mixer Transported from Place to Place on Heavy Trailer

run up on the low framework under its own power.—A. Flinner, Wichita, Kans.

¶Paraffin rubbed on woodwork with a soft cloth will remove all dust and dirt.

Novel Sliding Door on Drain Pit

By DALE R. VAN HORN

ONE of the objections to the open drain pit usually found at gas-filling stations is that there is no convenient method of keeping out the rain and snow. The accompanying illustration shows an installation which embodies this desirable feature in a practical, efficient

is set into the side of the pipe and a cable runs over the pulley. The end inside of the pipe is connected to an iron weight

Counterbalanced Sliding Door over an Oil-Drain Pit at a Gas-Filling Station Is Convenient and Safe, and Keeps Out Water and Snow

way. With this sliding door, the pit is kept closed at all times except when a car is to be drained. It is a matter of a few seconds for the operator to raise it to an upright position and attend to the car in the usual way. Since the door is counterbalanced with a weight inside of a vertical pipe (indicated by the dotted lines) only a little effort is required to open or close it. The pipe should be about 4 in. in diameter and extend 5 ft. above the ground, its total length being sufficient to allow it to be solidly set and give the weight freedom to run the necessary distance. A pulley

which pulls up and down freely, thus counterbalancing the weight of the door. A cap is screwed on top to exclude moisture. The door itself is made in two sections. Each section is of the same length and slightly wider than the pit. One section is hinged to a piece of 2 by 4-in. wood, which is mounted on the end of the pit by means of bolts whose heads are imbedded in the concrete. The other section of the door is hinged to the first section by means of ordinary hinges. Both sections are covered with matched lumber, with cleats on the inside, and the edges are trimmed with material, 1 in. thick and 3 in. wide.

When the door is down these hinges fit along the edge of the concrete pit. A handle is provided on one section of the door. To facilitate opening and closing the door it will pay to attach small casters to this half of the door so that they will ride on the concrete edge, which is built in the usual way. Steps lead down to the bottom of the pit for the worker. No dimensions are given as these are hardly necessary because each filling station proprietor has his own ideas about a pit. The installation shown is used in a number of cases in and around Kansas City and is proving entirely satisfactory.

Handy Radiator-Filling Funnel

Simple Funnel Facilitates Filling Auto Radiators

By soldering a tin funnel, which had lost its neck, to a cap of a glass jar it was made into a very satisfactory radiator filler. A hole, a little larger than the small opening of the funnel, was cut in the cap and the latter was soldered in place, as shown in the right-hand figure.

Test for Foul Air in Wells

Inexperienced well workers often lose their lives by going into wells without first testing them for foul air. This can be done by lowering an ordinary lantern into the well, as far as possible. If there is any foul air the flame will get dim and if there is much of it the light will go out entirely. The foul air can be removed in the following way: Lower to the bottom of the well an old pail filled with burning charcoal, holes being punched through the bottom of the pail to permit sufficient draft. As the foul air is heated it rises out of the well and fresh air enters to take its place.

After the fire has burned for about 10 or 15 minutes it can be removed, and the workers can go down safely. Even if the well is very dirty, carbonic-acid gas or foul air will not collect again for a considerable time, at least not for several days. A pail, a sufficient length of wire attached to the handle, and a long cord or rope, can nearly always be obtained, but a blower and a length of hose are not always procurable. Furthermore, the blower method is not quite reliable. Fresh air can be forced down into the well but a layer of gas may still remain at the bottom. One breath, enough to fill the lungs, may cause almost instant death. The easiest and surest method is the use of a charcoal fire as described.—James E. Noble, Toronto, Canada.

Profile Planing

In machining large, cast-iron forming dies of the kind shown in the detail, the method indicated in the illustration was found especially convenient. We made a template out of $\frac{1}{2}$ -in. machine steel and clamped this on the planer table. It was a duplicate of the dies, but about 1 ft. longer because the stroke of the planer must be greater than the length of the job being planed. The roller and the arm, which holds it, are screwed to the planer head and the latter is kept against the template with a rope and weight, the rope being fastened to the planer head and sliding over a pin, as shown. The depth of the cut is regulated by moving the clapper box. It is evident that the tool will move in a path that exactly duplicates the template. The operator feeds the tool by hand.—Charles Kugler, Philadelphia, Pa.

Profile Planing on Large Dies Was Done in Record Time by Using Template

Drill-Spindle Screwdriver

When a large number of long screws have to be driven, a fixture permitting the driver to be used in a drill press will be found a timesaver. By running the press at a reasonable speed, the work can be done much more quickly than by any hand method. The device consists of two round stock bearings, a length of steel tubing, a slotted screw and the special driver. The driver head is finished with a tongue in the center to fit the slot in the screw. These two parts are finished first, then, with a washer behind the head of the screw, the two bearings in which they turn are driven tightly into the ends of the tube. Another washer is placed on top of the bearing containing the driver screw, and two locknuts on top of this. These nuts are adjusted so that the screw will drive the screws into the work but will itself turn when the head touches. This forms a friction-slip drive and can be adjusted nicely with just enough tension to drive the screws. The tool is gripped in the drill-press chuck and the work, with the screws started a thread or two by hand, placed on the table. The screw to be driven is brought beneath the tool and the spindle fed down until the slot and tongue engage. The screws are then driven into the work by operating the drill press. The connection is maintained until the screw is finally driven, when the driver screw turns or rather ceases to turn with the machine.

Homemade Heat-Proof Paint

Where a heat-proof black paint is required, the following easily prepared mixture will be found practical. It consists of graphite, 2 parts; Fuller's earth, 10 parts; sodium silicate, 11 parts; glucose, 1 part and enough water to make the mixture applicable with a brush.

To Increase Capacity of Saw

When it was necessary to cut a large quantity of 5-in. pipe, the handsaw was found just a little too small, both in stroke and depth of cut, making it necessary to turn the pipe three times. To hasten the work and make smoother cuts, a piece of $\frac{3}{8}$ -in. rod was bent as shown in the illustration, and a pin to hold the blade was set in the flattened lowered end. By using a longer blade, the pipe could be cut through with one setting. The attachment has been left on the saw permanently, as it does other work just as well as before the alteration.—Harold E. Benson, Boulder, Colo.

Factory Foreman's Call Bell

When there is need in the shop or factory for a loud gong, such as is used to call the foreman to the office or announce the starting and quitting time, the installation shown in the drawing will be found useful. Remove the small bell and substitute a brake drum taken from an old auto wheel. Fasten this on with a large screwhook or a bolt bent to L-shape. There should be about $\frac{1}{4}$ in. clearance between the clapper and the gong shell. Drive three nails into the wall round the edge of the drum, to make it stand out from the wall as indicated. This will prevent muffling of the sound and the bell will give a clear signal.—Earl E. Moffat, Pasadena, California.

Quantity Production of Automobile Name Plates of Type Metal Is Easy Work for Anyone and Only a Few Tools Are Required to Do It

Profit from Making Auto Name Plates

By BRONALDO MURRAY

MAKING automobile name plates for autoists is a profitable spare-time business. Anyone can make a mold, pour the metal, and finish a large number in a short time. The only equipment necessary for this work is a gas plate, or other heating device, a small melting pot, a ladle and a polishing wheel upon which a wire brush and a cloth buffer are mounted.

The material used to make the name plates is ordinary type metal such as printers use in their linotype machines. A little metal antimony is added for hardening. The melting pot should be of iron and the type metal can readily be melted over an ordinary gas flame, or if this is not available, over a gasoline or kerosene-stove flame. A blowtorch can also be used for this purpose. After the metal has been melted, it is poured into a plate-steel mold with a ladle, as shown in the accompanying illustration. The mold is made from two steel plates riveted together. The lettering is cut in one plate with a metal-cutting scrollsaw, which plate is

then riveted to the second. After the metal has been poured and hardened, it is dipped in water to cool it. Shrinkage of the metal then takes place, which makes it comparatively easy to remove the name plate. This is done by laying the mold, with the name plate in it, face down on the bench top, and tapping the back side with a light hammer to loosen the plate. The work is finished nicely on a buffer, and dipped in a transparent varnish.

To facilitate fastening of the name plate to the radiator it is advisable to drill two or three small holes through the letters at different points. Bolts, a little longer than the thickness of the radiator, are pushed through the holes and washers and nuts on the other end hold it in place securely.

Emergency Grain-Drill Tube

While using the wheat drill this spring one of the rubber tubes dropped down and wound around one of the wheels, which ruined it. A length of old bicycle

tire was found, and a length of strap iron was placed in it to hold the section straight. This was attached in place of the damaged tube and answered as well for completing the spring seeding as a regular tube.—Geo. G. McVicker, North Bend, Nebr.

Novel Road-Marking System

Road commissioners in St. Joseph county, Mich., have found that they can save labor and material in dividing county highways into two lanes of travel by using white-painted squares every 10 ft. apart instead of applying a solid white band the whole length of the highway. The new method has proved entirely satisfactory.

Method of Measuring Angles

When no protractor head is available, an angle can be accurately measured by the method shown in the illustration. The dimension B is always the same and the distance C is read directly from the scale.

TANGENT ANGLE $A = 2\frac{1}{8} \div 4 = .531$
TANGENT $.531 = 28^\circ$
OR $A = 28^\circ$

First see that the surface plate is level, then mount the square on the work as shown and move the scale up or down until the bubble in the level is in the center. Now two sides of a right-angle triangle are known, and the angle A can be calculated by dividing the length of side C ($2\frac{1}{8}$ in.) by the length of side B (4 in.), the result in this case being .531, which is the tangent of the angle A. A table of natural functions will show the corresponding angle to be 28° . The application of this method is unlimited, and if a micrometer depth gauge is used to get the exact measurements of B and C very accurate results can be obtained.

☛ A good method of curing egg-eating hens is to punch tiny holes in each end of an egg, blow the inside out and then fill the shell with mustard.

Clamp Holds Pliers to Bench

Considering the facility with which parts are held in the jaws of large pliers and tongs for such work as splicing and fitting thimbles to wire cables, holding bar stock and electric conduit, the bench fixture shown in the illustration should appeal to all mechanics having such work to do. It is made of fairly thick flat iron or steel, and its construction and use are shown with sufficient clearness in the illustration to make any more detailed description unnecessary.—G. A. Luers, Washington, District of Columbia.

Fitting Connecting-Rod Bearings

Frequently, upon examining connecting rod bearings, it is found that the bearing shells are floating loose in the connecting rod and in the cap, even though they had originally been riveted in place. After re-riveting the bearing shells it may happen that their edges are lower than the surfaces of the rod and cap. To remedy this by filing is difficult and tedious work, necessitating repeated checking on a surface plate if an accurate job is to be done. An easier way is to make a number of shims, with the inner edge folded over, so as to press directly upon the bearing shells. If the number of shims and their thickness are correct, the bearing shells will be held permanently in place.—Richard P. Cole, Paterson, N. J.

Sawbuck Helps Raise Log

Sometimes it is troublesome to lift a large log up on a sawbuck, but with the

buck shown in the drawing the task will always be easy. It has a 7-ft. base made of 2 by 4-in. stock, and the other members are 1 by 4-in. In use the device is placed so as to straddle one end of the log and by pulling the base down, as

indicated by the arrows, the log is raised with little effort.—Luther Strosnider, Onago, Kans.

Clamps for Welding

It is often difficult to get a clamp to suit a specific welding need; sometimes the right size is not available, or else the clamp is not sturdy enough to withstand the strain. The clamp shown in the accompanying illustration is strong enough to stand any strains to which it may be put, and is adjustable. In making it, a ring, 1 in. wide and cut from 2-in. boiler tubing, is flattened on the sides to an oval shape. A reinforcement made from a section of a similar ring is fitted snugly around one end of the oval, and the ends of this strip welded to the sides. A $\frac{5}{16}$ -in. hole is drilled through the top of this reinforced section and the top of the ring, and then tapped for a setscrew. The shoe of the clamp is a piece of ring, 1 in. wide, and is also cut from boiler tubing, bent to fit. A spot countersink is made in the top of this shoe to receive the point of the setscrew. Because of its adjustable feature, this easily constructed

clamp comes in handy for many special purposes about the shop or plant.—A. G. Wikoff, New York City.

Inside and Outside Coatings for Smokestacks

There is no oil-mixed paint that gives good service when applied to the inner surface of a smokestack or breechings. The best covering is three or four coats of cement mixed in small quantities at a time to the consistency of thick paint and applied with a brush. A wire brush should be used to remove all soot and rust from the crevices before the cement is applied. For the outside, asphalt paint is best and this, also, should be applied only after a thorough wire brushing of the surface.

Quick-Acting Marking-Off Blocks

For holding medium-length round pieces when marking off positions on opposite sides or at right angles, the device shown in the illustration will be

found to be a great convenience. Once it is made, the center is known, and, unlike V-blocks, where the height center varies with the diameter of the work, it remains the same for all sizes within its capacity.

To make it, two square blocks are cupped out on one side, clamped together, drilled and reamed at opposite corners to take two guide bars. The bars are a tight fit in one block and a sliding fit in the other. The latter is drilled through cornerwise to receive a tightening bar, which consists of a piece of cold-rolled stock drilled and countersunk in the center and sawed in two. A special screw with a tapered point, entering a tapped hole in the block, expands the two halves of the tightening bar against the guide bars. With this device the blocks can be adjusted very quickly

to hold the work. The piece is inserted in the cupped end of the fixed block, and the sliding block pushed up against the other end. One turn of the screw then tightens it in place.

Oil in Boilers May Cause Blistered Tubes

The practice of using oil in boilers to loosen scale and prevent them from rusting, when allowed to cool off or for other purposes, is not good unless care is taken to remove all particles of it with some grease dissolvent afterward. If this is not done, the oil adheres to the tubes or plates and prevents water from coming in contact with the metal. Thus the heat is not carried away from this point and the tube or part may become so hot as to blister and weaken.—Geo. G. McVicker, North Bend, Nebr.

Waterproofing Shipping Tags

Shipping tags bearing order numbers, addresses and other essential information can be waterproofed to prevent the writing from "running" by the simple method indicated in the drawing. Get an open glass jar, about 8 or 10 in. in height and large enough to allow your hand to enter freely. Suspend a 60-watt lamp in the jar as shown. Turn the current on and shave enough paraffin so that, when melted, it will come up

to the top of the lamp. It is then an easy matter to dip the tags in the melted paraffin, and this will effectively waterproof them. After use, the lamp is turned off and the paraffin is allowed to harden around it. When ready to use it again, just turn on the lamp and in a few minutes the paraffin will be melted so that tags can be dipped in it. The tags also will be strengthened by the treatment.—E. V. Wills, Chicago.

Stock Box with Hinged End
Saves Time in Store

A useful box to have around a store-room, where small parts are kept in bins, is one with a hinged end like that shown in the drawing. For dumping a boxful of parts into a bin without loss of time nothing could be handier. With ordinary boxes the user must tip them up to empty the contents, with the not uncommon result that some of the pieces are scattered on the floor. The other way is to ladle the contents out by handfuls, which, of course, is slow. We took an ordinary wooden box and knocked out one end of it, then made a new endpiece, the full over-all width of the box, and hinged it at the bottom. Next we bent an iron strap, to fit close over the box lengthways, and attached the ends to the hinged lid with a screw on either side. It is quite easy to unload this box into a bin even at shoulder height from the floor. It is lifted up and the hinged end is pushed a little way into the bin. The strap is then raised and pushed forward to open the lid. Tilt the box slightly, shake it, and the contents will slide out.—H. Moore, Montreal, Can.

⚠Taps should never be screwed down hard; if this is done, their washers wear out quickly, and the taps begin to leak.

This May Be Your Home

Copyright, Architects' Small House Service Bureau

Plan No. 5D33

QUESTIONS regarding home building addressed to this magazine will be answered by The Architects' Small House Service Bureau of the United States, Inc., controlled by the American Institute of Architects and endorsed by the United States department of commerce. Inclose 10c and self-addressed envelope. Blueprints, specifications and material list for the house shown here may be obtained at nominal cost. Inclose self-addressed stamped envelope for reply. If further information is desired, send 5c and stamped envelope for a 24-page booklet explaining how the Small House Service Bureau functions and showing 12 sample plans. A new booklet, entitled "Fifty Ways to Lower Home Building Costs," illustrated by ten bureau houses actually lived in, and showing how as much as \$1,000 can be saved on a home, may be obtained for 20 cents.

THE plan presented here was awarded an honorable mention by the jury in a recent competition for a five-room bungalow. The charm and simplicity of the exterior of this small bungalow are easily seen.

The rectangular shape of the floor plan permits a simple and direct roof treatment, without hips and valley, resulting in economy of construction and a low skyline. This low skyline aids materially in creating the satisfying impression of hominess and intimacy between the house and its setting.

The living room is of good size and proportion. If a fireplace is desired in this room, it could be provided at the end adjacent to the furnace flue, without much difficulty or additional expense. The dining room is conveniently located, with a deep bay window to make it sunny and

cheerful. The two bedrooms occupy corner positions and thereby are able to have cross ventilation. Each has a large clothes closet.

The kitchen is in the front of the house and is lighted and aired from two sides. The entrance to both kitchen and basement is protected by a trellis, so that the coming and going of the butcher, baker and candlestick maker will be unnoticed.

Materials used: Frame construction with wide wood siding or heavy shingles for exterior finish.

Width: Twenty-four feet. Depth: Thirty-eight feet.

Approximate size of lot: Thirty-five feet.

Facing: The house should be faced so as to take advantage of prevailing winds, sunny exposure and local views. The plan shown here can be reversed, if desired.

IN accordance with the editorial policy of this magazine never to accept compensation in any form for what appears in our reading pages, and also to avoid the appearance of doing so, we are obliged to omit the name of the maker or the seller of any article described. This information, however, is kept on file and will be furnished free, by addressing Bureau of Information, Popular Mechanics Magazine, Chicago.

Telephoning over a ray of light*Building on the Telephone Principle*

FIFTY years ago Alexander Graham Bell discovered the principle of the telephone. His first telephone employed wire as the connecting path over which words passed. Four years later he used a beam of light instead of wire to carry speech between telephone instruments.

Today, both wire and wireless telephony are employed on every hand in the service of the nation. Wire telephony, with its thousands of central offices, its complex switchboards and millions of miles of wire, envelops the country, carrying for the American people 70,000,000 conversations every day. Wireless telephony is broadcasting

entertainment and carrying important information to the remotest regions.

But new applications of the telephone principle are still being found. In the loud speaker, in the deaf set, the electrical stethoscope, the improved phonograph, the telephone principle has been adapted by the Bell Telephone Laboratories to the uses of the physician, the public speaker and the musician. The scientific research and engineering skill, which enable America to lead the world in telephone service, are also bringing forth from the telephone principle other devices of great usefulness.

TO CONTINUED PROGRESS IN TELEPHONE COMMUNICATION

When you grip it you'll know . . .

YOU'LL realize that here is no ordinary hammer: but a tool built after careful study of what a hammer should be . . . and what it should do.

Feel the balance, with the weight where it should be to give driving force with an easy swing.

See that large face that lets every blow strike true; the knife-like claws with the Plumb "curve" that draw any nail with ease.

And the Take-Up Wedge—that Plumb invention which permanently solves the loose handle problem.

Balance! Power! Head always tight! These features are built into the Plumb Hammer for a lifetime of service.

In your hardware store—try a Plumb. Then use your own judgment.

FAYETTE R. PLUMB, Inc., Phila., U. S. A.

**Plumb Take-Up Wedge
Keeps Handle Tight**

**Look for the
Red Handle
WITH THE
Black Head**
(Color Combination Registered as Trade Mark, U. S. Pat. Off.)
**EXCLUSIVELY
P L U M B**

Here is the wedge, invented and used only by Plumb that keeps handles always tight. When this wedge is inserted into the tapered hole, its V shape expands the wood against all sides of the eye, all the way in the hammer head.

When the handle works loose (and all handles do, because wood will shrink) you give the wedge a turn and the handle is solid and firm again for a long period of satisfactory service.

*Buy separately
or in assortments*

She will approve a hanging bookrack

AN open bookrack that hangs on the wall is fashionable just now. Why not make one yourself? There's real satisfaction in making something with your own hands. Relaxation, too. With a set of Stanley Tools you are able to attend to odd repair jobs and make many of the things you want around your home.

Good tools are necessary to do really good work. Every Stanley Tool is as efficient as expert craftsmanship can make it. That's why nearly every carpenter uses Stanley Tools. And that is why they are the first choice in thousands of manual training classes.

You can buy Stanley Tools separately and gradually accumulate your own set. And there are sets of Stanley Tools in a wide range from

which to choose—from No. 904 containing 12 tools in a sturdy oak chest at \$15, to No. 850 containing 49 tools in a beautiful cabinet at \$95.

There are also assortments of the same Stanley Tools in strong cardboard boxes with careful directions in each from which you can make your own chest. Prices \$5 to \$20.

IMPORTANT: For only 10c (to cover cost of printing and mailing) we will gladly send you a plan sheet which gives full directions for making a bookrack like the one shown above. Ask for Plan No. 1—PM.

Send for our Catalogue No. 34 which describes Stanley Tools both separately and in assortments. Address: The Stanley Works, New Britain, Conn.

The best tools are the cheapest to use. Ask your hardware dealer

STANLEY TOOLS

new! Valspar Brushing Lacquer *Dries in Minutes!*

VALSPAR Brushing Lacquer is the last word in Lacquer finishes. It is not only good for indoor use but is especially recommended for outdoors—on front doors, porch furniture and boats, canoes etc. It is waterproof, heat-proof and weatherproof and flows from the brush like a good enamel. Anyone can apply it.

No more excuse for shabby-looking furniture, woodwork and old unmatched pieces around the house. No more need to wait hours and hours for paint to dry. The new Valspar Brushing Lacquer, not only dries in minutes but dries with a satiny finish that looks well and wears well.

You'll enjoy using Valspar Brushing Lacquer—it's so easy! It's a joy

to see old furniture and woodwork transformed into new beauty with this wonderful lacquer.

Look around now and see if you haven't one or several articles that you'd like to dress up with a coat of this Marvelous New Finish.

It comes in the following colors:

<i>Cardinal Red</i>	<i>Nile Green</i>
<i>Jonquil Yellow</i>	<i>Persian Lilac</i>
<i>Palm Green</i>	<i>French Gray</i>
<i>Java Brown</i>	<i>Italian Blue</i>
<i>India Ivory</i>	<i>Holland Blue</i>
<i>Oriental Green</i>	<i>Peacock Blue</i>
<i>Coral Sand</i>	<i>Argentine Orange</i>
<i>Chinese Red</i>	<i>Black and White</i>

If you want any other color you can easily mix two or more of the above colors to produce an endless variety of shades. Fill in the coupon below for trial samples.

This Coupon is worth 20 to 60 cents

3000 Miles in 24 Hours

and Good Tools make it possible to Maintain this Schedule

THE giant mail plane, bearing your letter, roars across the field and leaves the earth on the first stage of a 3000 mile journey. You marvel at the ingenuity of the men who conceived this great machine droning its way toward the horizon with dizzying swiftness.

But mere genius, unaided, could never have built the airplane whose motor deafens your ears with its terrific roar. Tools are needed to build airplanes and they must be *good* tools. That's why you'll find Brown & Sharpe Tools in every shop where airplanes are made or repaired. Their high quality is known throughout the world.

Brown & Sharpe Tools are the tools for every mechanic's kit. Remember, you can't beat a Brown & Sharpe Tool for accuracy.

Ask your dealer for a free copy of Brown & Sharpe Small Tool Catalog No. 30. Keep it in your kit to use as a reference when buying tools. If your dealer cannot furnish a copy, write us direct.

Operate your radio set from the light socket

*Either with the new Balkite Combination
or with Balkite "B"
and a Balkite Charger*

**The New
Balkite Charger**

MODEL J. Has two charging rates. A low trickle charge rate and a high rate for rapid charging. Can thus be used either as a trickle or as a high rate charger. Noiseless. Large water capacity. Rates: with 6-volt battery, 2.5 and .5 amperes; with 4-volt battery, .8 and .2 amperes. Special model for 25-40 cycles. Price \$19.50. West of Rockies \$20.

**Balkite
Trickle Charger**

MODEL K. With 6-volt "A" batteries can be left on continuous or trickle charge thus automatically keeping the battery at full power. Converts your "A" battery into a light socket "A" power supply. With 4-volt batteries can be used as an intermittent charger. Or as a trickle charger if a resistance is added. Charging rate about .5 amperes. Over 200,000 in use. Price \$10. West of Rockies \$10.50.

All Balkite Radio Power Units operate from 110-120 volt AC current with models for both 60 and 50 cycles. Prices are higher in Canada.

The most convenient way of operating your radio set is from the light socket. Now you can do it merely by adding the new Balkite Combination or Balkite "B" and a Balkite Charger. Either way will give you full silent power for both circuits from the light socket.

All Balkite Radio Power Units are permanent pieces of equipment. They use no tubes. They have nothing to wear out or require replacement. They are noiseless. They do not hum. They always give just the power needed by the set because they do not run down or run low. Other than a slight consumption of household current their first cost is their last. With sets of high current requirements they effect a decided saving.

Operate your set with Balkite Light Socket Power. Over 600,000 receivers—one of every ten—are already Balkite equipped. Equip yours with Balkite and convert it into a light socket set. Know the pleasure and satisfaction of owning a set always ready to operate at its best.

FANSTEEL PRODUCTS COMPANY, Inc.,
North Chicago, Illinois

FANSTEEL
Balkite
Radio Power Units

**A New Balkite "B"
at \$27.50**

Balkite "B" eliminates "B" batteries and supplies "B" current from the light socket. Noiseless. Permanent. Employs no tubes and requires no replacements. Three new models. Balkite "B"-W at \$27.50 for sets of 5 tubes or less requiring 67 to 90 volts. Balkite "B"-X, for sets of 8 tubes or less; capacity 30 milliamperes at 135 volts—\$42. Balkite "B"-Y, for any radio set; capacity 40 milliamperes at 150 volts—\$69.

Balkite Combination

When connected to your "A" battery supplies automatic power to both "A" and "B" circuits. Controlled by the filament switch on your set—entirely automatic in operation. Can be put either near the set or in a remote location. Will serve any set now using either 4 or 6-volt "A" batteries and requiring not more than 30 milliamperes at 135 volts of "B" current—practically all sets of up to 8 tubes. Price \$59.50.

Learn to Play

You are always popular and sure of a good time if you can play some musical instrument. By yourself, with your friends around the piano, in orchestras or bands,—there is no end to the pleasure music will give you. And there is no easier way to earn money in your spare time. Choose your instrument now and let Wurlitzer help you buy it and learn to play it.

Try Any Instrument in Your Own Home At Our Expense

You may now have any known musical instrument for an ample free trial in your own home. There is no obligation to buy—no expense for the trial. You may return the instrument to us if you decide not to keep it.

Monthly Payments

The Wurlitzer plan makes it easy for you to own the instrument you want. Payments are conveniently arranged in small monthly sums—a few cents a day will pay.

Wurlitzer instruments are known everywhere for their unusual tone quality and excellence of workmanship. They are used by the greatest

professional musicians, bands and orchestras. Harry L. Jacobs of Sousa's Band, Brooke's Marine Band, and Chicago Grand Opera says: "I am proud to be the owner of one of your new cornets. It is positively superior to anything I have had in all my years of cornet playing."

Easy to Buy

Thousands of amateur musicians are playing on Wurlitzer instruments. Many of them could not have bought except through the Wurlitzer selling plan. Wurlitzer is the world's greatest music house, with stores and dealers in all parts of the country. But no matter where you live you will receive the same service by mail as though you lived next door to the factory. Send the coupon today.

Send for Free Catalog

The greatest musical catalog ever published. Over 3,000 articles—every known instrument described and illustrated—many of them shown in full color. Gives you all details of the Wurlitzer plan. Send coupon now.

If a Stranger walked into YOUR home—?

"JUST now I am listening to the '_____ Hour,' and if a stranger should walk into my house, not knowing I had a radio, he would believe the musicians were actually hidden in another room. I recommend Daven Resistance Coupled Amplification to anyone!"

J..H., Philadelphia, Pa.

NEVER has any radio hookup caused the sensation that the Daven Bass Note Circuit is causing. It does the thing that radio hook-ups of the past have never been able to accomplish—brings out all the **deep bass tones** as clearly and perfectly as the middle and higher registers.

In addition to this new quality of tone, it gives ample volume, perfectly controllable from whisper to roar; sensitivity, selectivity and ease of tuning. Simple to build, because constructed in straight line, economical of space.

Build yourself a Daven Bass Note set. The parts listed below may be secured from any authorized Daven service dealer with full instructions for assembling. We will gladly send you catalog, full information about the Daven Bass Note Circuit and address of nearby Daven dealer.

DAVEN BASS NOTE CIRCUIT

Made Up of These Daven Standard Parts

- 1 Set D. R. F. Coils
- 1 Daven Super-Amplifier with the new Glastors
- 3 Daven MU-20 Tubes

The New Daven Glastor. A resistor that is absolutely changeless and noiseless, because built on an entirely new principle—Daven Processed Glass.

5 tube SINGLE DRUM

STATION
SELECTOR

RADIO RECEIVER

6 Other Crosley Radio Achievements

The Crosley 1-tube "Pup"—\$9.75—a double-circuit set, with which laymen have heard radio signals probably the greatest distances.

The 4-tube 4-29—\$29—a 4-tube receiver of amazing efficiency. Already proven its right to a permanent position in the Crosley line. CRESCENDON equipped!

The 5-tube 5-38—\$38. The 5-tube tuned radio frequency set incorporating the CRESCENDON—a spectacularly popular model.

The 5-tube RFL 75—\$65—true cascade amplification; non-oscillating—non-radiating, regardless of how it may be mishandled.

The 5-tube 5-75—\$75—embodying the 5-tube single control, with drum station selector, as offered in a table model at \$50. SOLID MAHOGANY cabinet. Musicone built-in—41 inches high.

The 5-tube RFL 90—\$90—introducing the double drum station selector! Solid mahogany cabinet. Musicone built-in—ample room for batteries and all accessories. 41 inches high, 30 1/2 inches wide. Prices slightly higher West of the Rockies.

Crosley manufactures radio receiving sets which are licensed under Armstrong U. S. Patent No. 1,113,149 or, under patent applications of Radio Frequency Laboratories, Inc., and other patents issued and pending.

The CROSLY MUSICONES

The announcement of the new Super-Musicone is predicated on the success of the Regular (12-inch cone) Crosley Musicone in replacing hundreds of thousands of old type loud speakers. Musicone Regular 12-inch cone \$12.50. Super-Musicone, 16-inch cone, \$14.75. Musicone-sole with built in Musicone, \$32.00.

\$50.

Contrast the surpassing performance of this new type of Crosley Radio with what has hitherto been considered radio perfection.

The cabinet is solid mahogany, beautifully finished in two-tone and striped in gold. Metal fittings are rose gold finish.

The metal shielded chassis is divided into three compartments. The units shielded from each other, prevent interstage as well as external coupling. This improves stability of circuit and increases selectivity. This has never before been offered in sets of moderate price.

Crescendone Control affords unusual volume from distant stations.

Heretofore single dial control sacrificed selectivity. By means of the Acuminators, very sharp tuning is accomplished where the reception from local stations spreads broadly over the dial. Under average conditions, when once adjusted, these acuminators do not have to be touched again.

With the Graphic Station Selector, Stations from one end of the wave band to the other, are easily brought in at all times—**IN THE SAME PLACE.**

Crosley Musicones are manufactured under basic patents issued and pending, controlled by Crosley.

How to make better Christmas Gifts

*Wonderful New Way to Improve
Your Craftsmanship*

**LEPAGE'S NEW BOOKS
WILL SHOW YOU HOW**

NOW with the coming of the holiday, gift-making season, when the man who has a home workshop especially enjoys his hobby of making useful, practical gifts that can be used and appreciated by everyone in his home—come these two NEW LePage's Craft Books to show you how to make better Christmas Gifts and how to improve your craftsmanship. The titles of these two books are, "LePage's Practical Suggestions for the Home Workshop," and "LePage's Gesso-Craft Book."

Naturally when you tackle the making of an article like a breakfast nook, ship model or cedar chest, you want to come as near as possible to equalling the skill of the trained cabinet-maker. One of the things which he knows that you also must know is how to make strong joints—joints that combine strength with gracefulness and beauty. The only way to do this is with the use of glue, and this is exactly the information given you in these books. They tell you how to make strong joints with glue, and not only with glue, but with glue in its most convenient form—LePage's Liquid Glue.

Improve your craftsmanship

These books also show you how to cover up small defects in your craftsmanship. Now and then a tool will slip and an error is made. Or there are holes to be filled where nails or screws have been countersunk. Or the edges of a joint are not exactly even. A simple new way to repair these defects is with the use of LePage's Gesso instead of putty. LePage's Gesso will stick to any surface—wood, metal, glass, etc. It can be sandpapered, planed and painted or stained just like wood. We give you in the small panel below a simple formula for making LePage's Gesso, but of course we tell you more about it in the books themselves, together with practical information on decorating your finished articles with Gesso.

Send 10 cents for these NEW LePage's Books

The practical and useful help of these two books is yours for only 10 cents. Just write your name and address on the coupon below, tear the coupon out and mail it to us today with 10 cents in coin or stamps, and we will at once send you a copy of these two LePage's Books, postage paid. Address, LePage's Craft League, Dept. RR1, Gloucester, Mass. Tear out the coupon now so that you will not forget it.

Handiest tool in your workshop

Perhaps you have never thought of the special advantages of using LePage's Liquid Glue. It is always ready for immediate use. No weighing, soaking or heating is required. Its quality is always the same. It "sets" slowly enough so that you have plenty of time to place the joints together exactly as they should go. Slow setting also allows LePage's to penetrate the wood, increasing the strength of the joint. LePage's Liquid Glue is equal in strength to any animal glue. Buy a can for your workshop. It is the easiest, quickest, handiest form of Glue. Insist on LePage's.

Recipe for making LePage's GESSO

To make one cup of LePage's Gesso, you need 1 gill can of LePage's Glue, 1 1/4 cups whiting, 3 teaspoons linseed oil and 3 teaspoons varnish. Place whiting in mixing bowl and pour in slowly in this order, LePage's Glue, linseed oil and varnish. Mix until smooth. All ingredients obtainable at nearest hardware store.

LE PAGE'S GLUE

Bottles, Tubes, Cans

LePage's Craft League,
Dept. RR1, Gloucester, Mass.

Gentlemen: Enclosed you will find 10 cents (coin or stamps) in payment for LePage's Practical Suggestions for the Home Workshop, and LePage's Gesso-Craft Book. Please send a copy of each to:

Off to a good start

Getting off on the right foot—

—starting with good tools—is just as important in work as in sport.

Use Starrett Tools

A really good man—in sport or work—can sometimes come out from behind and win, but any disadvantage in those first few strides makes a heavy handicap for the best of them.

If you've a young fellow—a son, a friend, or an employee—who is just beginning to use tools, start him right. Give him a Starrett Apprentice Set, No. 901. Accuracy in the tools he works with is pretty sure to teach him accuracy in the work he does.

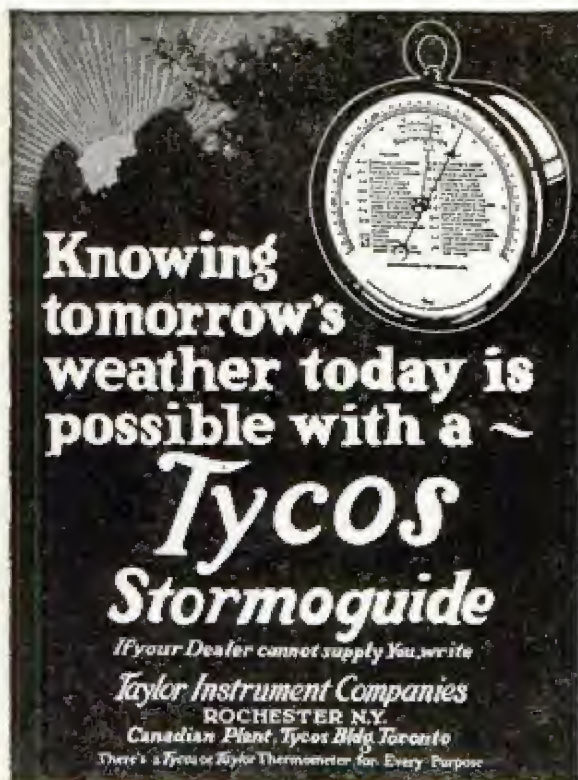

The No. 901 Set, in a handsome wooden case, contains a 6 in. Combination Square, 6 in. Flexible Steel Rule, Center Punch, Center Gage, 5 in. Divider, 6 in. Outside and 6 in. Inside Calipers and the Starrett Book for Machinists' Apprentices—184 pages on how to use tools and how to do good work.

Ask your dealer. Also write us for a free copy of the 352 page Starrett Catalog No. 23 "AP".

STOP THAT LEAK WITH SMOOTH-ON No. 1

YOU can apply Smooth-On with radiator full or empty, hot or cold, without removal from the car and without putting inside anything that clogs the circulation.

Merely roll the Smooth-On into a stiff putty, press it against and into the leak with your thumb or pack it into the defect with a knife blade or screw-driver, and scrape off the excess. The leak will stop instantly, and the repair is permanent. For a few cents and in a few minutes you will have avoided all the delays and expense of a professional repair job that couldn't be any better.

Bursting Water Jackets. Water jackets of automobile, stationary or marine gas engines which have developed long or short cracks or have even had pieces broken entirely out from freezing can be made thoroughly and lastingly serviceable by similar repair, or by applying Smooth-On under straps or a plate.

Smooth-On No. 1 can be used in a hundred ways in the household, and it often saves from \$50.00 to \$100.00 on the first job.

Keep a can of Smooth-On No. 1 with your tool kit and some day when caught with a repair job you will thank yourself for your forethought.

Get Smooth-On No. 1 in 7-oz., 1-lb. or 5-lb. tins at any hardware store or if necessary direct from us.

PREST-O-LITE COMBINATION
5 IN 1 OUTFIT

Convenient Canvas Roll Case

\$7.50

Repairing
a radiator

Heating and
bending rod

Intense heat that is portable

NO MATTER where there's a job that requires heat, you can carry the handy Prest-O-Lite 5-in-1 Outfit right to your work.

Its intense heat is ready instantly to help you make a quicker, better job of any brazing, soldering, melting or fusing work. Always ready; intense heat instantly.

The outfit is complete with four different size torch heads—the proper flame for every need. The outfit also includes a convenient soldering iron, rubber hose and tank wrench.

This equipment operates on Prest-O-Lite Gas in convenient tanks—the same gas used everywhere for truck lighting. Empty tanks are exchanged for full ones at any one of the thousands of Prest-O-Lite Service Stations. You pay a small amount for the gas only.

Ask about this money and time saving equipment at any Prest-O-Lite Service Station, or write us. The price is only \$7.50 complete.

Suppose You Were Offered Diamonds at 60% of Market Price

Suppose a reason you rarely think of makes possible here radically low prices, even for finest quality diamonds. Thousands of representative people, bankers, lawyers, merchants, others—continually reap this real advantage. Everything sent for Free Examination. This 3/4 century, oldest, largest diamond banking institution in the world, rated over \$1,000,000.00—converts into cash the diamonds on which money was loaned and not repaid. Loan values, a fraction of market values, are the price basis. Diamonds too from big cash deals direct with European cutters. Must sell now

Why Pay Full Prices

When Much Less Buys the Same See this 3/4 less 1/18 ct., snappy solitaire for \$69.50. Try to match at \$115.00. Examine free any bargain at our risk. Startling, legitimate offers here of diamonds at 60% of market price. Send now for full details. Diamonds of unusual qualities (also watches) from unpaid loans, offered at radically low prices based on mere loan values. Then, too, we have hundreds of diamonds from big, cash, European deals with diamond cutters, who sacrificed these gems away under the market. Send now for our latest offers of this internationally known cash headquarters.

Unpaid Loan Listings Ready

As low as \$60 a Carat

Radically different from a catalog. List accurately describes every diamond in full detail with guaranteed exact weight, color, quality, etc. Explains Guaranteed Cash—like Insurance Policy Loan guarantee. Also Unlimited Exchange privilege at price paid us. Gives full details of free examination offers. Don't wait, the very diamond you want may be in this very list at a price that will amaze you. Costs nothing to see. Write today. A postal will do, or—

\$5 DOWN Buys Any WITTE STATIONARY ENGINE

FROM 1½ TO 7 HORSE POWER

The One Profit Engine

NO INTEREST CHARGES

NOW, more than ever, the need for economical, dependable power is felt by the producer who is faced with ever-increasing labor costs. WITTE Throttling Governor ENGINES answer this important question perfectly—now an economical, dependable power plant is within the reach of everyone.

To-day the WITTE ENGINE sells at the lowest price in history. Into this WITTE has gone the ripe experience of more than 42 years of engine building—over 150,000 users all over the world have placed upon it their stamp of approval. You, too, can put a WITTE on your place, secure in the knowledge that it represents the Standard of Power.

The Most Modern Engine

The Witte Throttling Governor

the original and leader of the throttling-governor type. An even, steady speed with a big surplus of power for the heavy loads.

fuel cost of less than 2c an hour per H. P. Simple, trouble-proof and guaranteed for a life-time of hard work. Completely equipped with WICO Magneto, speed and power regulator and throttling governor, square, protected tank and die-cast removable bearings.

The minimum in fuel consumption—the WITTE ENGINE burns kerosene, gasoline, gas-oil, distillate or gas at a

SIMONDS

Simonds Saw
MADE IN CHICAGO, ILL.
FRANCIS H. SIMONDS
20-22

Why men who KNOW say "SIMONDS"

Watch a carpenter buy a hand saw! Watch him choose a Simonds Blue Ribbon! Men who count upon cutting tools most, know that Simonds Saws hang right, that they are balanced right, and the Simonds trade-mark signifies that they are made right. For Simonds Saws are made of specially treated steel and backed by Simonds' near-century of experience in the manufacture of the finest cutting tools. Next time you buy a saw, say "Simonds" to your dealer.

PARKS

WOODWORKING MACHINES

Cabinet Shop
Special
\$290
with motor

See this Parks this month!

October is "Parks Cabinet Shop Special month" with Parks dealers everywhere. In their showrooms this wonderfully popular woodworker will be on display and in many instances in actual operation. Parks Cabinet Shop Special No. 10 at \$290.00 is the handiest machine Parks ever built! Big enough to turn out first-class work—small enough to fit in a small shop or basement—a real machine built for real work without freakish "stunt" designing. It makes practically any cut and includes rip and cut-off circular saw, jointer, and band saw. Lathe and shaper may be added at small extra cost. Every man who does cabinet making or woodworking of any kind wants this splendid machine. It is the biggest woodworking machinery value on the market today. Be sure to see this Parks this month

PROTECT YOUR IDEAS Take the First Step Today

If you have a useful, practical, novel idea for any new article or for an improvement on an old one, you should communicate with a competent Registered Patent Attorney AT ONCE. Every year thousands of applications for patents are filed in the U. S. Patent Office. Frequently two or more applications are made for the same or substantially the same idea (even though the inventors may live in different sections of the country and be entirely unknown to one another). In such a case, the burden of proof rests upon the last application filed. Delays of even a few days in filing the application sometimes mean the loss of a patent. So lose no time. Get in touch with me at once by mailing the coupon on the opposite page.

Prompt, Careful, Efficient Service

This large, experienced organization devotes its entire time and attention to patent and trademark cases. Our offices are directly across the street from the U. S. Patent Office. We understand the technicalities of patent law. We know the rules and requirements of the Patent Office. We can proceed in the quickest, safest and best ways in preparing an application for a patent covering your idea. Our success has been built on the strength of careful, efficient, satisfactory service to inventors and trademark owners located in every state in the Union.

Clip this Coupon *and* Mail

TENTS

Write for these FREE BOOKS

NO CHARGE for Information On How to Proceed!

The booklet shown here contains valuable information relating to patent procedure that every inventor should have. And with it I will also send you my "Record of Invention" form on which you can sketch your idea and establish its date before a witness. Such evidence may later prove valuable to you. Simply mail the coupon and I will send you the booklet, and the "Record of Invention" form, together with detailed information on how to proceed and the costs involved. Do this NOW. No need to lose a minute's time. The coupon will bring you complete information entirely without charge or obligation.

STRICT SECRECY PRESERVED

All communications, sketches, drawings, etc., are held in strictest confidence in strong, steel, fireproof files, which are accessible only to authorized members of my staff. Feel free to write me fully and frankly. Your case will have my personal attention. It is probable that I can help you. Highest references. But FIRST—clip the coupon and get my free book. Do THAT right now.

Why Men Start Failing at 40

Many men feel old at 40 because a disorder of the prostate gland brings on such symptoms as aches in back, legs and feet, sciatic pains, disturbed sleep. Medical authorities claim that nearly two-thirds of all men past a certain middle age suffer with a disordered prostate. But now, without drugs or surgery, you can reach the source of trouble with an amazing new hygiene. Full details of this simple treatment are explained in a copyrighted, illustrated book, "Why Many Men Are Old At 40." Sent Free, without obligation, while the edition lasts. Simply write or drop a postcard requesting it to The Electro Thermal Company, 2162 Main Street, Steubenville, Ohio. Western Address: Suite 21-E, 303 Van Nuys Bldg., Los Angeles, Calif.

This 84 Page Wonder Book of RADIO Bargains

Send for this guide to Radio price and Radio quality. All of our vast resources and radio experience have been utilized to assemble for you in one gigantic institution, the best and newest things in radio. The Randolph catalog is indeed the radio market place of the world—a masterpiece of merchandising that befits our house, the largest exclusive radio mail order house in the world.

What Our Catalog Contains

Over 2,000 items—from the most beautiful, fully equipped console model radio set, down to the smallest part or tool for the set builder—kits, parts and supplies of every conceivable type and style. All beautifully illustrated and interestingly described. And to give the book added value, we have included radio data that makes it an invaluable text book for every lover of today's most fascinating and most wonderful achievement—RADIO.

Radio Sets

In this great radio market place you will find table model sets and console types with built-in loud speakers; the newest ampliphonic console sets; new Spanish period consoles; five, six, seven, and eight tube sets, with three dial, two dial, and the newest and most popular single simplified control. All sets are assembled in beautiful, genuine mahogany and walnut cabinets in a choice of latest types and designs.

5 Tube sets as low as \$24.99

Latest 1927 Models

All Randolph sets are sold at amazingly low prices. No matter what kind of set you want—no matter how little you want to pay—you can select YOUR SET AT YOUR PRICE from the Randolph catalog.

Radio Kits

Include the following well known circuits, designed and approved by the world's foremost radio engineers: Madison Moore Super; Victorreen Super; Silver Marshal Six; Sargent's Infirad; Remier Super; Short Wave Kits; 9-in-Line Super; New Acme Reflex; Cockaday; Neutrodyne; Browning-Drake; all classes of radio frequency, Super Heterodyne and every other approved popular circuit.

Radio Parts and Supplies

The Randolph catalog also contains a most complete line of "B" Battery Eliminators, including the famous Raytheon Eliminators; the latest type Loud Speakers, Cone Speakers, a complete line of quality "A" power units—in fact, you will find listed in this wonder book every part that goes into the construction of a radio set, or any accessories you desire, at prices that mean a substantial saving to you.

Free Radio Service

Everyone has need for radio service. We employ Radio Engineers who have made radio their life work. Their expert advice and helpful suggestions solve every radio problem of our customers.

Our Guarantee

Every article in our catalog is based on careful laboratory analyses and tests. We guarantee to back up every item in our catalog with our own as well as manufacturer's assurance of quality.

Why We Save You Money

Because we handle radio exclusively and sell a tremendous volume of everything in Radio, we can concentrate our buying power for the benefit of your customers.

Volume purchase regulates prices. We command rock bottom prices from manufacturers, and in many cases we contract for entire factory output of exclusive products. You will benefit by our great volume of purchases and sales, by securing anything you may want in radio at a substantial saving.

WINTER Comfort

CROWN FUEL SAVER

mixes **RED HOT
OXYGEN**
WITH GASES OVER
FURNACE FIRE BED—
SAVES 20% of FUEL

*Less furnace drudgery—
warm rooms—no draughts
—smaller coal bills—heat
evenly distributed.*

The saving of 20% of fuel is but one of the advantages of the Crown Fuel Saver. Users praise it for many other reasons.

One user likes the Crown because it keeps his wife from shoveling coal during his absence. This man tends the fire in the morning, and it does not have to be touched again until evening. Another user finds he can burn lower grade coal, get as much heat—and make a double money-saving.

Still other users find that the Crown does away with smoke, coal gas, and clinkers—lessens the amount of ashes—and sends a glowing warmth through every room in their houses.

It will pay you to learn about the CROWN

—indeed it will pay you to order one now, and place it on your furnace door ready to give you its benefits when the cold weather sets in. You can't lose—for we absolutely guarantee that the Crown must save at least 20% of the coal you ordinarily use—or we will refund its purchase price.

Proved by 11 years' use

The Crown fits the feed door of any furnace or boiler—home or industrial—requires no regulation as it works automatically.

Write today

for full details and special low price of Crown with money-back guarantee.

CROWN FUEL SAVER CO.

DISTRIBUTORS WANTED—Men who seek a solid business connection and a steady income, write today. Wonderful opportunity as there is a Crown Fuel Saver or a Smoke Preventer to meet the needs of any heat producing plant from the parlor Areola to the largest power plant.

Get These Coils!

T. R. F. Kit
List \$12.00

*—and greatly improve the
performance of your set!*

The Aero Coils composing this kit are extremely supersensitive, due to the fact that they have a much lower high frequency resistance than other types of inductances.

The use of Aero Coils in place of other inductances has never failed to improve set performance. They prove their supersensitivity by tremendously increasing power, by improving quality of tone, and by their extreme selectivity.

If you would obtain best results from any circuit, be sure to use Aero Coils. Order from your dealer or direct from us.

Big 8 page 4 colored layout system (actual size blue prints) and complete instructions for building the Aerodyne Receiver free with each kit.

Tires Hammered Full of NAILS LEAK NO AIR

AGENTS
MAKE

\$5,000 to
\$10,000

A
YEAR

MAKE YOUR TIRES
PUNCTURE-PROOF

In ONE Minute

Galacite

The new scientific invention—has the marvelous property of sealing all punctures the moment they occur. ACTS INSTANTLY. You can pick up any number of nails WHILE RIDING without the loss of a pound of air. One application, made in a minute, without taking tire off wheel or rim, actually makes tire puncture-proof for life. Guaranteed not to injure tire, tube or valve. On the contrary Galacite preserves rubber, lengthening the life of both tube and tire.—Often Increasing Tire Mileage from 10,000 to 12,000 Miles

MAKE THIS TEST Take a hammer and drive as many nails into a tire as you wish, 10, 50, 100, it makes no difference; all punctures are sealed instantly. Used in all kinds of tires including low pressure BALLBOONS, Galacite is inexpensive and can be tried out at our risk. Warranted for one year but will last indefinitely.

GUARANTEED TO DO ALL WE CLAIM

Don't confuse Galacite with anything else ever intended for the same purpose; it is new and different—a revolutionary invention, the result of years of research and experiment. We are a long established highly rated concern. Galacite is backed by our Money Back Guarantee. It must make good—or we will. You take no risk.

AGENTS—Earn \$5,000 to \$10,000 a Year

TREMENDOUS PROFITS

Galacite agents make almost unbelievable success. A NAIL DRIVING demonstration does the selling. No lengthy arguments. Demonstrate and sell to car owners, Garages, Filling Stations. Work all or spare time in your home town or travel. You can also manufacture and sell GALACITE PUNCTURE PROOF inner tubes. The market for Galacite is inexhaustible. EXCLUSIVE territory and splendid FREE ADVERTISING HELPS make your business permanent. RUSH your name to us for full particulars. TERRITORY IS GOING FAST. Delay may cost you the chance to make \$5,000 to \$10,000 a year. Send no money, just your name, but WRITE TODAY.

E. M. DAVIS CO., Dept. 5646, CHICAGO, ILL.

This Most Modern LOG SAW

Saws 15 to 25 Cords a Day

MANY of our customers saw 25 cords a day with a WITTE One-Man Log Saw. One man felled fifty 18-inch trees in 5 hours. Another says: "My WITTE goes anywhere and saws more wood than forty able-bodied men could with hand saws." One man made \$500.00 the first season in hilly country. Another sawed sixty cords in two days at a cost of \$1.85—showed a profit of over \$200. Still another says: "Far cheaper than hired help."

WITTE Log and Tree Saw

makes you money, rain or shine. Has long, clean, "arm-swing" stroke. Steady running, fastest and most dependable. Cannot bind or clog, blade won't "whip or ride." Simplest and easiest to operate, yet trouble proof. Makes any cut you want—merely turn a screw to change speed. Easily moved from place to place. Weighs only 38 pounds at the handles.

Burns Kerosene, Gasoline, Gas, Gas-Oil or Distillate

Cheapest to operate—runs all day at cost of 2c an hour per H-P. Burns any fuel with a big surplus of power for any work. **USE IT FOR OTHER WORK.** Completely equipped with WICO Magneto, speed and power regulator, throttling governor and 2 flywheels so can be used for any other jobs—pumping water, grinding grain, etc.—an all-purpose outfit that will work every day in the year.

The WITTE Throttling Governor Engine is in use all over the world. For 40 years it has been known as the standard of farm power. More than 150,000 in use, always giving satisfaction. Buy on your own terms. **No Interest Charges.**

WRITE TODAY for Our FREE Book

or ask about our 1½ to 30 H-P. Engines, 3-in-1 Saw Rigs or Pump Outfits if interested. No obligation.

WITTE ENGINE WORKS

Quick shipments also made from nearest of these warehouses: Minneapolis, Minn., Atlanta, Ga., Trenton, N. J., Richmond, Va., Tampa, Fla., New Orleans, La., Dallas, Tex., Laredo, Tex., Denver, Colo., Billings, Mont., New York, N. Y., Albany, N. Y., Bangor, Me., Portland, Ore., and Los Angeles, Calif.

Change to Tree Saw in 3 Minutes

Only 3 minutes to change from log saw to tree saw—10 seconds to clamp to tree. Fastest felling ever known. Fells trees from any position—clear down level with the ground.

WICO Magneto

Equipped with famous WICO Magneto—the most perfect ignition known. Sure performance in any climate or temperature—40 below zero or 100 in the shade—not affected by oil or water. The WITTE Log Saw could go through a flood and "work like a charm" instantly. Starts Easy at 40 degrees below zero.

Penalize unruly hair—

*Train it to stay in place—all day!
Try this dressing—FREE*

Off-side! . . Penalized five yards . .

Penalize your unruly hair!—it's off-side most of the time. Out of place, straggly-looking—an hour after you brush it.

Stop experimenting with your hair! Start now to use the dressing more fellows rely on than any other. *This dressing is Stacomb.*

No matter how you wear your hair, Stacomb will keep it that way—until further notice!

Yet Stacomb never leaves your hair sticky-looking nor greasy. Nor dry and brittle—an easy prey to dandruff—as daily wetting with water makes it. Stacomb is actually beneficial, since it helps to prevent dandruff.

And whether you prefer the combing cream (in jars and tubes) or the new Liquid Stacomb, you will find that both forms are equally pleasant to use and either one will really keep your hair in place. At all drug and department stores.

FREE OFFER — Stacomb

MOTOR DRIVEN TOYS

Invents New Saxophone Easier to Play

A startling new invention that makes learning the saxophone much easier, according to teachers, has been perfected by one of the oldest musical instrument houses in the country, the York Band Instrument Co., 126-J Division Ave., Grand Rapids, Mich. A remarkable change in tone hole construction eliminates the necessity of excessive blowing, banishes flat, quavering notes and gives only full-rounded tones of amazing richness even to the beginner. Now, if ever, is the time to learn the saxophone. This superior saxophone costs no more than ordinary quality instruments. You can take ten months to pay. Send for FREE CATALOG of York saxophone and other musical instruments. Act now, and see for yourself how easy you can now learn to play.

NEW MAGNETIC DISCOVERY BUILDS HEALTH

An electro-magnetic appliance has been perfected that builds robust health and vitality. SHALER 5 MINUTE VULCANIZER

Clamp on a Patch and Light the Fuel!

Easiest Way to Fix Punctures

Fixing punctures is an easy, sure job with the handy little Shaler 5-Minute Vulcanizer. When the emergency comes, no matter where you are, simply clamp a Unit over the puncture with the Shaler Clamp, and light the solid fuel.

In five minutes unscrew the clamp, take off the Unit and throw it away. That's all. The repair is part of the tube—vulcanized (HEAT-WELDED). That's why nearly five million motorists use it.

Get the complete outfit for your car today for only \$1.50 wherever auto supplies are sold. Slightly higher in Canada and far West.

FOLEY AUTO SAW FILER

\$15 to \$20 a day—that is the big money others are making with the Foley. Here's what Mr. Wm. Burnett, 143 Villard Ave., No. Milwaukee, just wrote: "I am having good success with the Foley Saw Filer. It has paid for itself twice in the three months since I got it. I have all the work I can do in the evenings. I have all the way from 2 to 8 saws every evening."

You get 50c or more filing hand saws and \$1.25 to \$1.50 for retreating. Anyone can run it and turn out better work than experts, six times as fast. Big business from carpenters, contractors, woodworking shops, meat markets, schools and homes, is ready for the first man with a Foley.

**\$10
BRINGS IT
TO YOU**

Guaranteed!

You don't take a chance either. Use the Foley for 30 days and if it doesn't sharpen saws as perfectly and easily as stated we will take it back and return your money. Mail this coupon now.

EVERY ONE IN KEDS — At De Pauw University, as at other prominent colleges and schools, Keds are worn for all kinds of athletic work.

On the "Gym" Floor in the Shoe of Champions

SPEED—comfort—long wear. These are the things champions look for in athletic shoes. That's why the great tennis stars and leading basketball teams today choose *Keds*.

No wonder! *Keds* soles give the same sure grip on the "gym" floor they give on the open trail or on the tennis courts. They are light and springy, but so tough they outwear 2 or 3 pairs of ordinary "sneakers."

And *Keds* uppers are wonderfully light and strong. They keep your feet well ventilated and comfortable, yet give you just the support you need.

For gymnasium work, indoor baseball, and for basketball, you'll find you have more fun and play a better game in *Keds*. But be sure they are real *Keds*. Look for the name *Keds* on the shoe.

Keds come in all popular styles and at prices from \$1.25 to \$4.50.

United States Rubber Company

The "METEOR"

A popular *Keds* basketball shoe with sponge rubber heel seat and narrow shank to support the arch. Its tough laminated sole gives a sure grip. In white or brown; black trim.

The "SPORTSTER"

A sturdy athletic-trim *Keds* for the hardest gymnasium and general wear. White with black trim or brown with gray trim—both models with gray corrugated soles.

Keds
Trademark Reg. U. S. Pat. Off.

They are not *Keds* unless
the name *Keds* is on the shoe

Please Mention Popular Mechanics

CRESCENT Smith & Hemenway

the *all around* line of
mechanics' and electricians tools

WHEN you want a plier, a wrench, or a screwdriver of special size or shape for some unusual job, go to your hardware dealer and ask to see his line of Crescent-Smith & Hemenway Tools. Crescent Wrench

Douglas MacLean says, "You can't beat a Lyon & Healy saxophone for tone or for ease of playing!"

"I've heard 'em all and I can tell the difference with one ear. The Lyon & Healy is some sax!" Doug's own words.

Douglas MacLean, Famous Players film star, is an amateur musician—but he knows real music when he hears it. He has found, too, the secret of popularity—knowing how to do things! Like Doug, you will find our simplified instrument easy to finger, easy to play clear, loud and mellow. The choice of professional musicians, also, because of its perfect pitch, accurate adjustment and beautiful finish.

Discover for yourself the advantages of our special "Easy to pay while you play" plan by mailing the coupon today. Popularity, friends, fun, money are yours when you play a Lyon & Healy Saxophone. Let us help you learn quickly, easily. But act now!

HOME MANUFACTURING CO.

Dept. B-3, 18 E. Kinzie Street, CHICAGO

You Can Be a Fire Prevention Expert —Earn \$5000 to \$8000 a Year!

Factories, stores, homes and farms everywhere are being equipped with a marvelous new fire protection—a Fire Gun that shoots a flame-smothering gas 30 feet or more. So powerful is this gun, and so easily handled, that great industries are adopting it as standard equipment. And hundreds of men are needed at once to demonstrate this amazing new invention. No matter where you live or what you are doing now, you can earn \$5,000 to \$10,000 a year and more, acting as a representative of the Weldon Manufacturing Company.

\$67.50 IN ONE DAY

L. J. Clement of Michigan, earned \$67.50 a day in one small town; La Barr of Minnesota made \$167 in one week; Butters of Florida drew \$592 in one month. Scores do as well. And in your community you, too, can earn big money. You can quickly become a Weldon Fire Prevention Expert and be the recognized fire authority in your territory. You will find money rolling in like you never dreamed, because the Weldon Fire Gun has become the sensation everywhere.

People everywhere want the Weldon Fire Gun because it is not a pump gun—no complicated mechanism to jam up at crucial moments. No leakage to render the extinguisher useless when so sadly needed. The Weldon operates by the mere turn of the wrist and from a NATURAL position. Big industries like the Standard Oil, Goodyear, General Motors and U. S. Government departments have chosen Weldon Fire Guns as standard equipment. And everywhere you turn you find people eager for adequate fire protection—they want the Weldon Fire Gun.

MAIL THE COUPON

We furnish you with the famous **WELDON SUCCESS PLAN** that enables you to start right out earning big money. No Weldon Fire Prevention Expert is satisfied with a mere \$10.00 a day—Weldon is too much in demand. So if you really want to better your income, if you really want to earn exceptional money, fill out the coupon below and turn it what Weldon offers you. It will cost you only two cents to take the first step—and the first step leads you quickly into **SUCCESS—REAL MONEY—A LIFETIME CAREER**. But just sending the coupon places you under no obligation. Fill it out now.

Weldon Manufacturing Company DEPT. 7-L, Grand Rapids, Mich.

BE PRESIDENT OF YOUR OWN COMPANY

CONCEIVE that of all methods present or past, the Nestler Rubber Fusing Process (U. S. Pat. No. 1,354,992) alone, produces a positive fusion or welding of new and old rubber! —The first and only practical and successful method of re-rubbing a tread worn tire, is here—a simple, quick, inexpensive process that makes tires new again and cuts tire costs in half!

Each year since 1917 thousands of tires have been successfully Nestlerized annually by ourselves and licensees. Due to increased demand caused by high tire prices we have decided to issue a limited number of additional licenses. Licensee rights will include protected territories, free instruction, and full cooperation. 17 million cars and 34 million tires replaced annually constitute a limitless opportunity for business and profit.

The demand for territories is great and prompt action is vital.

A printed proposition with full facts and detailed information is now ready. Write for it TODAY.

FROST-RADIO

New Parts for Your Set

Type 700
Metal Frame
Rheostat

Here is a rheostat that can be operated for hours without any noticeable change whatever in resistance. The windings will take 25% to 50% overloads without overheating. Simple and rugged in construction. Contact arm slips smoothly over windings with no wear, yet always with positive contact. Supplied in resistances of $2\frac{1}{2}$ to 75 ohms. Equipped with pointer knob. Price 50c at your dealer's.

The Super Variable Resistance

A New FROST-RADIO Unit

This non-inductive high resistance unit has withstood 46,000 turns of the roller contact arm without appreciable wear or change in resistance. Its action is smooth and noiseless. Cannot overheat. Used for controlling volume, tone, regeneration, grid bias, etc. Type 880 has 2 terminals and is supplied in 50,000, 100,000, 200,000 and 500,000 ohm sizes. Type 890, 3 terminals, is furnished in 400, 2,000, 50,000, 100,000, 200,000 and 500,000 ohms. Price of both types, \$1.25 each.

Home**

Dr. Harlan Tarbell
Master of Magic—
who has mystified
magicians as well as lay-
men with his
marvelous tricks.

Astonish Your Friends

Gain that magnetic popularity that makes you the center of any crowd. Business and social success is assured the man who can perform mystifying tricks. You can earn big money either on the side or as a professional, as well as being the most popular person in your crowd. Why envy others' skill? You can learn Magic yourself, quick and easy.

Earn \$250 to \$1000 a Month

Even sleight-of-hand, generally supposed to require long practice, is NOW made simple to learn. For Dr. Harlan Tarbell, one of the really Great Magicians, has finally opened up the secrets of his profession in a completely illustrated course offered at a merely nominal cost. Through the wonderful Tarbell System you will be able to mystify and entertain your friends with simple tricks taught in your very first lesson. After that Dr. Harlan Tarbell takes you through the entire maze of sleight-of-hand, card tricks and elaborate stage diversifications. The apparently superhuman doings of the accomplished magician become as simple as ABC when you just know how.

Mail Coupon for Special Offer

There is a tremendous demand for magic entertainment. Clubs, Lodges, Charity and Social affairs—all will pay high fees to the man who knows Magic. Dr. Harlan Tarbell really gets as high as \$250 for an half hours work right now. Opportunity everywhere to make money aside from your regular occupation. Salesmen find it a tremendous asset. Find out all about this unprecedented opportunity to learn Magic. The coupon brings full details without any obligation. Mail it TODAY.

Shop Notes

393
Articles

FOR
1926

517
Pictures

This announcement has been eagerly awaited by thousands because they have learned that each yearly issue of Shop Notes contains dozens of short cuts that save time and money. Every article is written by some man who has tried the idea and found it worth money. The variety of subjects covered is one reason why so many folks buy Shop Notes each year. In many ways the 1926 issue surpasses previous numbers. The following brief list will give you an idea of the variety of subjects covered.

SOME OF THE SUBJECTS

Auto repair tools	Machine shop practice	Printer's aids
Farm equipment	Well drilling discoveries	Dairy equipment
Service station ideas	Garage equipment	Electrical equipment
Shop tools	Poultry raising helps	Machinist's tools
Blueprinter's helps	Sheet metal worker's helps	Contractor's aids
Merchant's shortcuts	Concrete working ideas	Small-shop machines
Paint formulas	Special grinding attachments	Tool boxes
Ice harvester	Tree protectors	Boat repair suggestions
Builder's equipment	Carpenter's shortcuts	Photographic discoveries
Emergency heating plants	Painter's equipment	Auto trailer
House-moving suggestions	Home-made bench saw	Welding equipment
Making magnetic chuck	Draftman's secrets	Overcoming dredging difficulties
Storage battery links	Store room time-savers	Septic tank
Merchandise display	Electrician's methods	Using twist drills
	Lathe fixtures	Pulley and gear speeds and sizes

5,510 Ideas on All Shop Work

There are now 14 volumes of Shop Notes available. And this unrivaled library of shop helps may be had for a special price of \$6.50. If you do not have the back numbers of Shop Notes, you should purchase the entire library. The following are now available:

1908, 1912, 1913, 1914, 1916, 1917, 1919
1920, 1921, 1922, 1923, 1924, 1925, 1926

Amateur's Guide PROFESSIONAL'S HANDBOOK

Both amateurs and professionals find Shop Notes of wonderful value. The articles are so clearly written and so thoroughly illustrated that even a boy can follow them. Teachers of Manual Training should have the complete library.

SEND NO MONEY

MILWAUKEE, WIS.

1924 No 13610
\$ 20.00
DOLLARS

PAID TO THE ORDER OF
RAY T. DART
RECEIVED
20 AND 00 CTS

Earn \$20.00 Daily Easy

Cash in on the high cost of gas. Establish yourself in a permanent business with a field that increases as fast as Henry Ford can produce his cars.

You don't have to be a master salesman to sell a device that eliminates two-thirds gas consumption, thus making a Ford actually run on 8¢ gas. Every Ford owner an instant buyer the minute the unique features of the new improved Weeks' Super Carburetor are explained.

SELL EVERY FORD OWNER

The gas saving feature of the Improved Super in itself is sufficient to make it an absolute necessity, but gas saving is only one of the many things it does. Think of the demand for this marvelous device that eliminates carbon, creates amazing power making it possible for Fords to climb steep hills in high, gives amazing pick-up, instant starting, quiets Ford motor, stops oil pumping and increases life of your car considerably.

\$5,000 to \$10,000 YEARLY EASY

Weeks' salesmen everywhere are making big money. Our selling plan provides a tremendous profit and backed by our national advertising the way is paved for quick easy sales. Get out of the rut. Don't be satisfied with a small income. Put yourself in the big money class as a Weeks' salesman.

GET YOUR TERRITORY NOW

Real money-making propositions do not remain open long. Unless you act quickly someone may get in ahead of you. Our territory plan gives you a large field to work. Therefore, your earning capacity is practically unlimited.

FREE SAMPLE OFFER

We provide our workers with a FREE SAMPLE so that they can first convince themselves of the sterling features of the Weeks' Improved Super Carburetor. Get this FREE SAMPLE offer and big money-making proposition at once.

READ THIS PROOF

In our office files we have thousands of letters received unsolicited from our agents reporting sales results that in these unanticipated with the possibilities of the Super may seem almost unbelievable. Below are reproduced a few of the many letters to give you an idea of what others are doing as Super agents.

\$74.00 Earned in One Day

"I like to sell 'SUPERS' because they are something that every Ford owner needs and will buy. My best day's work was on a Saturday not long ago, when there was a good crowd in town and I put on a demonstration. In about one hour's time I had sold 12 'SUPERS' and sold 37 in all that day."

Saleman Seward

\$218.00 Profit in Two Days

"I sold and banked \$104 today and on another day I sold and banked \$114."

A. W. Leonard.

Makes Nearly \$200.00 in a Week

"Think my order first express. My 100 order last week almost gone."

J. A. Penline.

Sold Six in Two Hours

"I sold six 'SUPERS' in less than two hours tonight. I think it's a pretty good start—for it's the first thing I ever sold."

E. Morgan.

\$1,000,000 Divided Among Our Men

Think of it! A million dollars has actually been made by our agents. Millions more yet to be made. Are you going to get your share? You owe it to yourself to obtain full particulars of our proposition when you can do so without any obligation, by simply sending in the coupon—TODAY.

LAUREL MOTORS CORP., Dept. M, Anderson, Ind.

Personal— to all Palmolive Shaving Cream users

GENTLEMEN:

We have developed a new-type talc for you. A talc that takes all that after-shave shine away; yet that's invisible on the face.

A talc that provides the well-groomed appearance gentlemen want, without the "powdered" look that followed old-time talcs.

Please accept a two-weeks trial can to test. Just mail the coupon below.

A new-principle creation

We are experts in skin care, as you know. We make Palmolive Soap, the leading toilet soap of the world. Palmolive Shaving Cream—the most amazing success in its field—is another of our creations.

Palmolive After Shaving Talc is the result of long experiment in the noted Palmolive laboratories. Before offering it to you, we spent some years in perfecting it.

We tried scores of formulas. We consulted skin specialists on what was best for the skin. Then in collaboration with them,

perfected this scientific creation providing two unique features unknown before, we believe, in either talc or powder.

First: It is invisible. Men don't like powder to show. Second: It is a scientific combatant of skin roughness—keeps the skin smooth and soft.

On the market but a short while, thousands of men are making its use a twice a day habit—after shaving in the morning; before dinner in the evening.

We believe it will delight you. Send us the coupon. Do it now. We'll send you a can of this talc, also a 10-day tube of Palmolive Shaving Cream.

3975

LUMINOUS PAINT

Make Your Watches, Clocks, Etc., Visible by Night

The very latest discovery in the scientific world. Hitherto, practically unobtainable LUMINOUS PAINT, which, applied to the surface of any article, emits rays of white light, rendering it perfectly visible in the dark. THE DARKER THE NIGHT, THE MORE BRILLIANT IT SHINES. Quite simple to use. Anyone—you can do it. A little applied to the dial of your watch or clock will enable you to tell the time by night. You can coat the push buttons or switch plates of your electric lights, match boxes, and innumerable other articles; make your own Luminous Crucifixes, Luminous Banners, etc. Small bottle, price 25c. Larger sizes, 50c and \$1 postpaid.

JOHNSON SMITH & CO., Dept. 587, RACINE, WIS.

Serpent's Eggs

Box contains 12 eggs. When lit with a match, each egg gradually hatches itself into a snake several feet long, which curls and twists about in a most life-like manner.

Price per box, 10c postpaid, 3 for 25c.

CIGARETTE MAKER

Roll your own and save money. Makes them better and quicker besides saving more than half. Use your favorite brand of tobacco. Neat, useful and handy. Pocket size, weighs 1/4 oz. Made entirely of metal, nickel-plated. Price 25c postpaid.

MIDGET BIBLE

GREAT CURIOSITY
Smallest Bible in the World. Size of a postage stamp. 200 Pages. Said to bring good luck to the owner. A genuine work of art. Must be seen to be appreciated. Make good money selling these to friends, church acquaintances, etc. PRICE 15c each, 3 for 40c, 12 for \$1.35, 100 for \$7.50. Also obtainable in Leather Binding with gold edges. Price 50c each, 3 for \$1.25, \$4.50 per doz. Magnifying Glass for use with Midget Bible, 15c.

STAGE MONEY

With a bunch of these bills, it is easy for each person of limited means to appear prosperous by flashing a roll of these bills at the proper time and peeling off a genuine bill or two from the outside of the roll. The effect created will be found to be all that can be desired. Prices, postpaid: 40 Bills 20c, 120 for 50c, or \$3.50 thousand postpaid.

Wonderful X-Ray Tube

A wonderful little instrument producing optical illusions both surprising and startling. With it you can see what is apparently the bones of your fingers, the head in a lead pencil, the interior opening in a pipe stem, and many other similar illusions. A mystery that no one has been able to satisfactorily explain. Price 10c, 3 for 25c, 1 dozen 75c. Johnson Smith & Co.

Good Luck Ring

Quaint and Novel Design

A VERY striking and uncommon ring. Silver finish, skull and crossbones design, with two brilliant, flashing gems sparkling out of the eyes. Said by many to bring Good Luck to the wearer, hence its name. Good Luck Ring. Very unique ring that you will take a pride in wearing. ONLY 25 CENTS.

JOHNSON SMITH & CO.

Dept. 587

RACINE, WIS.

A De Luxe Edition of our new 1927 CATALOG mailed on receipt of 25c. Handsome binding. Bigger and better than ever. Only book of its kind in existence. 550 pages of all the latest tricks in magic, the newest novelties, puzzles, games, sporting goods, rubber stamps, interesting books, curiosities, etc. unobtainable elsewhere. Remit by Stamps, Coin, Money Order, Check, etc. Unused Canadian and Foreign Stamps also accepted.

Exploding Cigarettes

JUST LIKE ORDINARY CIGARETTES. BUT SUCH REAL STARTLERS! The box contains ten genuine cigarettes of excellent quality. They appear so real, but when each cigarette is about one-third smoked, the victim gets a very great surprise as it goes off with a loud BANG! A great mirth provoker yet entirely harmless. Price 25c per box.

Popular Watch Charms

Very pretty little curiosities and decidedly novel. Fitted with Magnifying Lens that enlarge the picture to a very surprising degree; in fact, it seems almost incredible that a clear picture could be possible in such a small compass, and how sharp and distinct they show up when you look through. Come in assorted views—Actresses, views of Panama Canal, Lord's Prayer in type, etc.

Mystic Skeleton

A jointed figure of a skeleton 14 in. in height, will dance to music and perform various gyrations and movements while the operator may be some distance from it.

Novelty Badges

Kissing Permit 10c. Garter Inspector 10c. Two very novel metal badges nickel plated, that you can wear, giving you fun out of all proportion to their trifling cost. 10c. each badge, 3 for 25c, or 75c per doz. p-pd.

MAGIC FLUTE

Wonderfully Sweet Toned and Musical

The Magic Flute, or Humations, is a unique and novel musical instrument that is played with nose and mouth combined. There is just a little knack in playing it which, when once acquired after a little practice, will enable you to produce very sweet music that somewhat resembles a flute. There is no fingering, and once you have mastered it you can play all kinds of music with facility and ease. When played as an accompaniment to a piano or any other musical instrument, the effect is as charming as it is surprising.

Good Luck Ring

Quaint and Novel Design

A VERY striking and uncommon ring. Silver finish, skull and crossbones design, with two brilliant, flashing gems sparkling out of the eyes. Said by many to bring Good Luck to the wearer, hence its name. Good Luck Ring. Very unique ring that you will take a pride in wearing. ONLY 25 CENTS.

BLANK CARTRIDGE PISTOL

Protection against Burglars, Tramps & Dogs

Prices
50c
\$1.00

Well made and effective; modified on latest type of Revolver; appearance alone is enough to scare a burglar. When loaded it may be as effective as a real revolver without danger to life. It takes standard 22 Cal. Blank Cartridges obtainable everywhere. Price 50c, superior quality, \$1.00 postpaid. Blank Cartridges, by express, 50c per 100. Holster (Cowboy type) for Blank Cartridge Pistol, 50c. Johnson Smith & Co., Dept. 587, Racine, Wis.

BOYS! BOYS! BOYS!

THROW YOUR VOICE

Into a trunk, under the bed or anywhere. Lots of fun fooling the teacher, policeman or friends. **THE VENTRILLO** a little instrument, fits in the mouth out of sight, used with above for Bird Calls, etc. Anyone can use it.

Never Fails. A 32 page book on ventriloquism, the Ventrillo. ALL FOR 10 CENTS.

Everything about the Ku Klux Klan told in a clear, fearless manner. Book tells all—How it started and was oppressed in 1871—The New Ku Klux Klan—How Organized—How Members are Enrolled—Oath of the Klan—Questions for Candidates—Cred—Objects of the Order—Obedience—Fidelity—Pledge of Loyalty—Ku Klux Klan and the Masons—The Jews—The Masons—Real K. of C. Oath—The Negro Ku Klux Klan, etc., etc. Latest and most complete book on the Klan published. Price 35c, Postpaid. Stamps or Cash.

PISTOL, OPERA & FIELD GLASS

PRICE POSTPAID, \$1.00

It is made in the shape of and looks like a regular Automatic Pistol. No one is likely to stop and ask you whether it is real or not. Thus it is likely to prove itself very handy in an emergency. On pressing the trigger it opens up, as shown in the illustration at the right, revealing nine most useful articles—Opera and Field Glass, Telescope, Mirror, Magnifying Glass and Burning Lens, Reading Glass, Sun Dial, Sun Compass, etc. In the handle of the revolver there is a place for various pocket necessities, such as First Aid Articles, Buttons, Pins, etc. The Pistol is of sheet metal, blued finish, that can be carried comfortably in pocket. PRICE \$1.00.

HOT DOG!

It is made of rubber like a small balloon. Contains a curious chemical that acts in a most remarkable way. Squeeze the deflated balloon with the hand and it suddenly becomes quite warm and fills itself up with air. It is SELF-BLOWING. Play all sorts of jokes with it. Lay it on a chair; place it secretly underneath anyone; under-neath anyone's pillow; drop it in someone's pocket, and after a short time, when friction causes the chemicals to act, a large and superbly colored balloon develops. Each Hot Dog in a small box. Quite harmless, but loads of fun. 15c. each, 3 for 40c., \$1.35 doz. postpaid.

Female SEX Indicator

The same notion can be obtained over a letter written by a man or woman, etc. It is fascinating; baffling. We have never been able to figure out how it's done, but we've never seen it fail. Many novel and entertaining facts may be performed with the Sex Indicator. For example, similar results can be obtained with animals, cats, dogs, rabbits, over birds, chickens, canaries, etc. Also used to predetermine the sex of chickens and birds, etc. In fact it is sold as a patented sex tester in Europe. Price 25c, or 3 for 65c. pd.

Pay Nothing Until November 15th

Then Only \$10 a Month!

We will send you a Bulldog Pipeless Furnace for free inspection. If you want it, pay nothing until November 15th. Then pay only \$10 a month at our amazingly low price. Don't consider buying any furnace until you find out about the Bulldog. Write today.

Comes Completely Erected!

2 1/2 Tons Heats 5 Rooms!

"There is no heater to compare with the Bulldog. I burned 2 1/2 tons of coal last winter and heated 5 rooms and bath."

—Walter Geary, Gloucester, Mass.

That's what the Bulldog does with coal! Here's what it does with about the lowest grade of fuel you can think of!

"I can run my Bulldog Furnace steady for fourteen days in normal weather conditions on the actual cost of 50 cents." So writes F. R. Redetzke, of Cleveland, North Dakota, and he adds: "Hard to believe, is it? That's what some of my neighbors thought until I showed them! We have an unlimited amount of green screenings in this country. That's the fuel I am using."

Write! Send today for our free book and "Pay Nothing Now" offer — also get the wonderful record of Bulldog Success. Factory connections in both East and West. We ship from nearest point. Get ready for winter NOW! Mail this coupon TODAY!

Motorize your Workshop with an Electric Drill

A GOODELL-PRATT Electric Drill will double the joys of your workshop.

Besides being efficient, powerful machines for fast drilling in wood or metal, they are in reality portable power plants that any ingenious craftsman can adapt to drive light lathes, bench saws, polishing and grinding heads, jig saws, bench planers, etc.

Just think of the innumerable possibilities

such a shop offers. How much more fun you can get out of it with power-driven equipment to do the roughing out and uninteresting parts of your work.

Goodell-Pratt Electric Drills are made in six sizes with Universal Motors for either Alternating Current or Direct Current at 110 or 220 Volts.

Write for descriptive folder and prices.

The Goodell-Pratt Electric Drill is made in

1/4 Inch Heavy Duty
3/8 Inch Heavy Duty

1/2 Inch Light Duty
1/2 Inch Standard

1/2 Inch Heavy Duty
3/4 Inch Heavy Duty

Powerful motor; long, patented, high-speed, self-oiling armature bearings; wide-faced, specially heat-treated gears that run in bronze bearings; new self-tightening chuck; ample ventilating system; quick accessibility of all parts; handy switch control and absolute cleanliness—these are some of the improvements that make the Goodell-Pratt Electric Drills truly remarkable in performance and wonderfully free from trouble.

SM

PARTS THAT ARE BETTER

INTERCHANGEABLE COILS

Designed for extremely low losses and permanent uniformity. Space wound with enameled wire upon threaded moulded bakelite forms and sold under a guarantee of accuracy of less than one-half of one percent. Made in several models—for use wherever the best in coils is required—and in a variety of ranges from 18 to 1500 meters. Prices, \$2.50 to \$3.25 each, depending upon type. Universal 6 contact socket, \$1.00. Send for descriptive circulars.

Plug-In Coils

220 AND 221 AUDIO TRANSFORMERS

S-M 220—the big, husky audio transformer you hear in the finest sets — the only transformer with the *rising* low note characteristic that means real quality — not only on paper—but when you hear it. It is a power job—yet this finest of audio amplifying devices is sold, with a guarantee, for but \$6.00.

The S-M 221 is an output transformer that will bring out the low notes on your present set. Used between the last audio tube and the loud speaker—it eliminates blasting and will increase speaker capacity for handling strong signals without distortion. \$6.00.

220 and 221

210 AND 211 LONG WAVE TRANSFORMERS

Accurately measured and tested. Actual amplification to the fraction of one percent is predicted in the tests that these transformers have to pass. Type 210 is an untuned iron core transformer and the 211 a Sharply air core filter. Available peaking at any frequency between 40 and 65 K. C. for 199 or 201A tubes, price \$6.00 each.

210 and 211

631 STAGE SHIELD

An aluminum shield, $7\frac{1}{2}$ by 5 by $3\frac{3}{4}$ inches—for oscillator, detector, R. F. amplifier and other circuits. Pierced for a condenser, coil socket, tube socket, choke, bypass condensers and lead wires. It opens at the bottom allowing easy wiring and the top seals it tightly from outside interference. May be used in any standard circuit to improve results. \$2.00.

"I could almost shave with this"

IT'S the cutter of chromium steel from the Sargent Auto-Set Bench Plane. Keen. Edge-holding. Easy to sharpen when necessary because of the exclusive Auto-Set feature. This permits cutter to be removed and replaced in a jiffy without changing original adjustment.

Sargent Auto-Set is the most convenient all-round plane you can use. Designed and built primarily for professional use, it has also been enthusiastically welcomed by manual training students and instructors and by folks with

home workshops. Its simplicity will save you time and fussing. It is so strongly built of finest materials that you may never have to replace it.

Sargent Steel Block Plane should also be on every school and home work-bench for the smaller jobs and for finishing. As in all Sargent Planes, its cutter is of chromium steel, placed at a low angle; it is particularly fitted for end work. See Sargent Planes at almost any good hardware store, and write us for interesting booklet.

Some People Will Never Learn —The Truth About Radio

MANY a new radio will perform perfectly. Whether it continues to do so or not will depend entirely on one thing—the very truth that is seldom discussed.

Do you drive a car?

Don't little troubles happen occasionally?

Do you depend on a handy man for service or do you prefer a mechanic who has been factory trained on *your* make of car?

Experience has, no doubt, proven to you that men who know *all* about *all* makes of cars generally don't make the best mechanics to work on *your* car.

You wouldn't think of buying any car, no matter how low its price, unless you knew you could receive service by men who know how.

Treat the purchase of a radio instrument in exactly the same manner if you wish lasting satisfaction.

Service is just as necessary, just as important on a radio instrument as it is on an automobile.

Occasionally little things will go wrong. They will be serious to you and almost as serious to the handy man who can fix all radios but—

Such troubles will mean just a few seconds' time to a factory trained service man who knows that make of radio as he should.

While radio is rather a new industry, even now there are 4364 factory trained Ozarka service men—let us give you the name and address of the one nearest you.

Allow him to set up an Ozarka in your home.

He will let you do all the tuning so that you can satisfy yourself as to exactly what it will do for distance, volume, tone and ease of tuning.

His factory training enables him to keep every Ozarka which he sells, working just as it did when new.

Any radio, no matter what its price may be, will only be as satisfactory as the trained service behind it.

OZARKA

INCORPORATED

120 W. Austin Avenue C

CHICAGO, ILL.

\$132.50 Plus installation and transportation; Ozarka Senior 5 Tube Model complete with Loud Speaker and all accessories.

\$100 Plus installation and transportation Ozarka Junior 5 Tube Model complete with built-in speaker and all accessories.

\$215 Plus installation and transportation Ozarka Console 5 Tube Model, solid walnut cabinet, complete with all accessories.

We have a few Openings for the Right Men

WHILE there are today 4364 Ozarka representatives, some territory is still open. We want men who believe in the future of radio—men who are tired of working for some one else—men who would like to add to their present income by devoting their evenings to Ozarka.

At the start, you can keep your present position. Later on, after you have proven what you can do, then you will give us all your time because it will pay far more than your present position.

The man we want may not have much money but he is not broke. He has lived in his community for some time—he has a reputation that his word is good. He may not have made any startling success but he has never "put over something" just to make money. He may know nothing about radio or salesmanship but he will be successful if he is willing to study what we are willing to teach him, without cost.

The field in radio is wide open for the trained man. The success of the 4364 Ozarka representatives proves what men can do. If you are interested, ask for a copy of the Ozarka Plan, a 108 page book which tells a true story of how big money and a permanent business can be built in radio.

THE WONDERFUL "SAFETY FIRST" HEATER

The cheapest, cleanest, most efficient method of producing heat known to science! For heating garages, filling stations and small homes. Absolutely safe under all conditions, even in a room filled with gas. The SAFETY FIRST HEATER automatically makes and burns a blue flame gas of high heating efficiency from common kerosene (coal oil), costs less than dirty coal and is cheaper to install than an ordinary coal stove. An ornament wherever installed. Send for descriptive circular.

GLORIA LIGHT COMPANY 111-10 North May Street

A·B & C Radio Power from your light socket

SILITE

TRICKLE CHARGER

.6 ampere charging rate.
Absolutely noiseless—no
bulbs—makes a power unit
of your battery.

\$10.00

SILITE

HOMCHARGER

Charges at 2½-3 amperes.
Absolutely noiseless—no
bulbs—can be used while
set is operated.

\$19.50

Your battery troubles are over at last! Now ALL radio power is in your light socket, for ALL circuits, A, B, and C.

Silite, the marvelous new metallic glass rectifying element, provides perfect rectification of light socket current into "A" battery power. Leave the Silite Trickle Charger permanently connected to your storage

battery and on charge—then forget battery charging forever. Silite Trickle makes a power unit of your battery—insures constant, never-failing "A" current that operates your set at highest efficiency. For very large sets, where a higher charging rate is necessary, Silite Homcharger is recommended. Either model may be used while the set is operated.

Kodel A&B Transifiers

Kodel A and B Transifiers actually supply all A, B, and C current direct from the light socket—no batteries of any kind are needed. Just plug the Transifiers into the wall socket and turn on your receiver—smooth, uniform A, B, and C power operates your set as it has never operated before. Watch the new life, new pep it gives your set—the longer range, the much greater volume. Transifiers give quiet, noiseless reception that was never

before possible, even with fresh, new batteries.

Vastly different from and superior to the ordinary power units, Transifiers consume electric current only while you operate the set—maintenance cost is much less—it costs less than one-half cent for every hour the set is operated, for all A, B, and C power.

Ask any radio dealer to show you the Silite Chargers and Kodel Transifiers.

MODEL 10 "A" TRANSIFIER—Supplies 2, 4, or 6-volt "A" current direct from the light socket. For sets using up to 10 tubes **\$42.50**

MODEL 10 "B" TRANSIFIER—22½ to 150 volts "B" current; 4 to 10 volts "C" current for any size set. Operates power tubes **\$42.50**

MODEL 61 "B" TRANSIFIER—22½ to 90 volts noiseless "B" power for sets up to 6 tubes **\$28.50**
(Bulbs extra)

"Behind the Scenes in a Broadcasting Station" an interesting 24-page booklet, will be mailed free on request, together with literature describing Silite Chargers and Kodel Transifiers.

NOW!—after months of painstaking work, designing and testing, these two brand new 1927 Westingale Radio Models are ready for you to try. New and far better in performance. Newer and much simpler in construction and control.

They are the last word in every way,—the finest, most up-to-date Radio Receivers on the market, embodying every new feature—and priced at just about half the usual cost.

Why not have the NEWEST Radio? Why pay high prices? Why take chances when you can put either of these last minute Westingale Models in your home for 30 Days' Trial on the absolute guarantee that if you don't find it the most beautiful and the most satisfactory Radio set for the money, you have ever seen or heard—you don't have to keep it.

Agents Make Big Money

We want agents in every locality to demonstrate and take orders for these amazing, low-priced, last-minute Westingale Radio Models. The easiest kind of work. Just like play. Quick sales and big profits. No radio experience necessary,—we show you how. This is your chance to get into the RADIO business for yourself without capital. Build a money making business of your own or a profitable side line in your spare time.

\$50 to \$100 a Week—Easy FULL OR SPARE TIME

No home is complete without a good radio. Millions will be sold this fall. Get a Westingale set on 30 Days' Trial,—use it as a demonstrator and get your share of these profits. Demonstrate to your neighbors and friends, and see how the beautiful appearance, simple control, powerful performance and remarkable low price of Westingale models make them sell on sight.

Your Own Radio FREE

We also have a plan whereby you can put a Westingale set in your home on 30 Days' Trial and make enough demonstrations in your spare time to get your own set without cost before the trial period is up.

Special Discount to Agents

To quickly introduce these two wonderful new 1927 Westingale Models we are offering, for a limited time, a big reduction, way below retail prices on the FIRST Westingale outfit placed in each community. Don't wait. Be first in your locality and mail the coupon or a post card today for our FREE Radio catalog, special discount offer and full particulars.

Big—Powerful—Dependable 5-Tube, Coast to Coast Sets

Every late feature,—every new, worth-while idea is built into these two 1927 Westingale Models—yet 15 unnecessary parts and many feet of useless wiring have been discarded to simplify—improve—perfect them and eliminate your radio troubles. All we ask is a 30-Day Trial at our risk to convince you that this ultra simplicity really puts Westingale Radios years ahead of all others in powerful reception,—wonderful loud, clear tone—dependable service and EASY control.

The Utmost in Distance, Volume and Attractive Appearance

Built in the new style, big, massive, period type cabinets, hand rubbed brown Walnut finish. The front panels enhanced with a beautiful Renaissance design, embossed in dull gold, these new Westingale Models are as pleasing in appearance as they are in performance. Either the 1-Dial or 2-Dial Model will reach out and bring you music, concerts, speaking, sports or market reports from hundreds of broadcasting stations all over the country with enough volume to fill your home. Unbeatable for performance, appearance or price.

Don't buy a radio until you get our FREE Catalog which fully pictures and describes these two newest of all radio models and explains our 30-DAY TRIAL OFFER. Don't wait—a special introductory discount for those who write quick. Mail the coupon today. Get posted before you buy.

7 Tube Set Single Dial Radio

The
Metrodyne
ONLY ONE DIAL TO TUNE

Retail Price

\$75

Completely Assembled
**BIG DISCOUNTS
TO AGENTS
AND DEALERS**

Wonderful offer direct from the factory! The world's greatest radio. A perfect working, single dial control, 7 tube receiver. And just to prove our claims, we will ship it to your home for 30 days' free trial. Test it under all conditions. Test it for distance, volume and tonal quality—and if you are not convinced that it is the best single dial set you ever heard, return it to the factory. We don't want your money unless you are completely satisfied.

BIG PROFITS TO AGENTS AND DEALERS

Our Agents and Dealers make big money selling Metrodyne Sets. You can work all or part time. Demonstrate the superiority of Metrodynes right in your home. Metrodyne Radios have no competition. Lowest wholesale prices. Demonstrating set on 30 days' free trial. Greatest money-making opportunity. Send coupon below—or a letter—for our agent's proposition.

Metrodyne Super-Seven Radio

A single dial control, 7 tube, tuned radio frequency set. Approved by America's leading radio engineers. Designed and built by radio experts. Only the highest quality low loss parts are used. Magnificent, two-tone walnut cabinet. Artistically gilded genuine Bakelite panel, nickel'd piano hinge and cover support. All exposed metal parts are beautifully finished in

24-k gold. Easiest set to operate. Only one small knob tunes in all stations. Dial is electrically lighted so that you can log stations in the dark. Volume control regulates reception from a faint whisper to thunderous volume, 1,000 to 3,000 miles on loud speaker! The Metrodyne Super-Seven is a beautiful and efficient receiver, and we are so sure that you will be delighted with it, that we make this liberal 30 days' free trial offer. You to be the judge.

METRODYNE SUPER SIX RADIO ON 30 DAYS' FREE TRIAL

Wonderful 6 tube, long distance radio set. Approved by America's leading Radio Engineers. Easy to operate. Dials log easily. Tune in your favorite stations instantly on the same dial numbers every time. No guessing. 30 days' free trial.

Mr. Howard of Chicago said, "With 5 Chicago Stations on the air I tuned in 17 out-of-town stations, including New York and San Francisco on loud speaker very loud and clear."

We are one of the pioneers of radio. The success of Metrodyne sets is due to our liberal 30 Days' Free Trial Offer, which gives you the opportunity of trying before buying.

Let us send you proof of Metrodyne quality

C. J. Walker, Mariposa, Calif., writes: "Received my Metrodyne Single Dial set O. K. I believe that these one-dial sets are going to be excellent sellers. I had no trouble in tuning in stations enough to satisfy anyone, so you will please send me another set."

Roy Bloch, San Francisco, Calif., writes: "Very often we travel from New York to the Hawaiian Islands quickly—from station to station—by means of the little tuning-knob which operates the electrically-lighted dial. The Metrodyne Single Dial Set is much easier to operate than any radio set I've ever seen."

We will send you hundreds of similar letters from owners who acclaim the Metrodyne as the greatest radio set in the world. A postal, letter or the coupon brings complete information, testimonials, wholesale prices, and our liberal 30 days' free trial offer.

NEW DOUBLE-HEAD REVERSIBLE SPARK PLUG

ABSOLUTELY GUARANTEED FOR 2 YEARS

USERS "WILD OVER IT"

A New Spark Plug with increased value and efficiency—for all makes of cars, trucks and tractors. Double head means double service. Usable at both ends. Two plugs in one. Automatically cleans itself by running; without detaching wires. Color of spark, visible on top; shows how efficient they fire. Positively a sensation. Entirely new. Exclusive principle. In a class by itself. Everybody wild over it. All say it's a wonder.

MORE PROOF—G. Engessor of Iowa says:

"Your Double Head Reversible Spark Plug is the best I've ever used. I had to clean plugs daily before using yours."

EVERYBODY SATISFIED

There is nothing else like it—means unlimited spark plug service. Its life is perpetual. That's the reason we do not hesitate to guarantee it for two years.

NEW PRINCIPLE—SELLS ITSELF

Wherever demonstrated, everyone is convinced of the increased value in this new principle and easily sells itself. Every user is a sales booster.

SPECIAL INTRODUCTORY OFFER

To the first person in each locality we are willing to send a set under a very special offer.

BE THE FIRST IN YOUR LOCALITY

CHICAGO TIRE LUG COMPANY, INC.,

SPARK PLUG SALES DIVISION

500-338 W. 47th St.

CHICAGO, ILLS.

AGENTS "MAKE BIG MONEY"

This field is tremendous. The money-making possibilities are wonderful. Spare time or full time. They all make money. No experience necessary. Your profits are only limited by the number of automobiles in your locality. Every car owner that sees this new plug is interested and wants to buy.

VISIBLE CAP FITS EITHER END

\$60 TO \$120 PER WEEK

Ordinary profits do not belong in this class, because the advertising value of each satisfied user creates a bigger demand and this demand must be supplied. That's why we want distributors everywhere. This means big money to each distributor. Irrespective of what you may have sold before, here is a real article, with a real proposition, in an unlimited field.

Agents Wanted Everywhere

The demand for territory will be big, so we advise you to act promptly. Remember, we want to be fair to everyone.

COSTS NO MORE

Than Any Ordinary Spark Plug—Outlasts Them all

BIGGEST SENSATION OF THE YEAR

TRIPLE SERVICE BRAKE BAND LININGS

FOR FORDS —Outlasts 3 Ordinary Linings—

Here is a New Trouble-Free Triple Service Transmission Brake Band Lining for Fords that is entirely different—a scientific lining that actually outlasted three sets of ordinary linings under comparative tests—a real sensation for Ford Owners—No more slipping, each pedal pressure results in the oil being correctly and continuously forced between the brake surface and the steel drum, preventing burning, unraveling or glazing.

Scientifically Constructed—Chemically Processed—Selected Wood

Triple Service Brake Band Lining is positively a New Sensation and has already proven its value on Fords—They are made of Chemically Processed, Scientifically Constructed, selected wood (instead of the old style easy-to-burn-out fabric). Transmission linings for Fords previously placed on the market have, in most cases, been a source of trouble. The life of Triple Service is practically unlimited. Permits gradual stopping with non-chattering smoothness that is surprising.

Grooved With Heavy Lubricating Strip of Long Fibre Asbestos

Affords an extremely powerful grip on full pressure—yet a smoothness that is non-chattering—Costs no more than ordinary linings—yet lasts 3 times as long and gives more efficient service.

AGENTS WANTED EVERYWHERE

We want agents in every locality to take care of the demand and to the first person in each new locality we are willing to send a set under a very special offer.

THIS BIG FREE BOOK
tells you exactly how—

Richly illustrated; full of explicit practical counsel from experts to amateurs. Well worth a quarter—but you get it for nothing! Use the coupon below.

Furniture Finishing as experts do it—

YOU can practically duplicate the fine work master-craftsmen do on expensive furniture and costly cabinetwork. Your home-built creation will do you proud, finished as our **FREE BOOK** tells you how. Make use of its easily-followed instructions given by professionals. Send for it right away!

Make Shabby Things Look New Again

You can refinish worn, shabby, scuffed, old furniture so it will look almost new, and save yourself many a dollar—through this book. It tells you in plain English just how to finish all kinds of wood—old or new, hard or soft; how to stain wood expertly; how to do everything in wood-finishing for yourself at home. You will find the book mighty useful!

JOHNSON'S WOOD DYE

(Penetrating Stain)

With Johnson's Wood Dye you can treat inexpensive soft woods so as to rival costly hardwood in beauty. It is extremely easy to apply, dries perfectly in four hours, and never will rub off nor smudge. So deeply does it penetrate that the original color of the wood is not betrayed even though the surface is marred. Comes in 17 handsome shades, including these very popular numbers:

No. 124—Golden Oak No. 140—Early English
No. 129—Dark Mahogany No. 123—Dark Oak
No. 127—Brown Mahogany No. 131—Walnut
And all other fashionable and standard wood colors.

FURNACEOLA
Small, beautiful, efficient
The New Home Heater

\$67.50

Represents the latest development of a strictly high class furnace that can be set on the first floor and heat the whole house to uniform temperature, designed to take the place of old style, inefficient stoves in homes, stores, churches, etc., where there is no basement.

Furnace Heat
Save Economy

Manufactured just like high class furnaces. Circulates warm air to the front corner of every room in any weather. The "Furnaceola" has heavy jacket, open bottom, top, for rapid air circulation. Holds fire full 24 hours under test. Burns fuel. Can be equipped with magazine for burning only hard coal. Just six or seven small rooms with no more than old style stove. 47 inches high over floor space occupies 22 inches. Takes 4-in. pipe.

More Heat—Less Cost

A-1061—Cast iron, nickel trimmed. \$67.50
A-1057—Grain mahogany, enameled \$74.50

Golden Anniversary Bargains and Easy Terms

In addition to highest grade goods at wholesale and the many other Hardin-Lavin advantages of easy installing, free plans, etc., we also GIVE YOU EASY TERMS.
